Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@IncludeTextMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a text message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeTextMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeTextMessages." If "tbl_NotificationMwi.IncludeTextMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IncludeVoiceMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a voice message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeVoiceMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeVoiceMessages." If "tbl_NotificationMwi.IncludeVoiceMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MediaPortObjectId

Property Name	Value
Description:	The unique identifier of the MediaPort object Cisco Unity Connection uses to set MWI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MediaPortObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MediaPortObjectId." If "tbl_NotificationMwi.MediaPortObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for activating/deactivating the MWI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MediaSwitchObjectId." If "tbl_NotificationMwi.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiExtension

Property Name	Value
Description:	The phone number (extension) of the MWI to activate.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MwiExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123_Required
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MwiExtension." If "tbl_NotificationMwi.MwiExtension" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiOn

Property Name	Value
Description:	A flag indicating whether the MWI is on or off. This is the state of the MWI from the perspective of Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MwiOn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MwiOn." If "tbl_NotificationMwi.MwiOn" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.ObjectId." If "tbl_NotificationMwi.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UsePrimaryExtension

Property Name	Value
Description:	Set to 1 to indicate that the subscribers primary extension should be used instead of MwiExtension
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.203. csp_NotificationRuleCreate

Creates a new NotificationRule object by inserting a new row into tbl_NotificationRule. A NotificationRule object specifies when and which NotificationDevice is used for notification of new messages.

Additional Information

The parameters @DisplayName, @NotificationDeviceObjectId, @ScheduleSetObjectId and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name for this notification rule to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Required	@NotificationDeviceObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationDevice object to use.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification rule belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FailRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object that Cisco Unity Connection will run if attempted notification to the device specified in this rule fails.
Optional	@InitialDelay	In	inherit	int (4 bytes)	The amount of time (in minutes) from the time a message is received until the message notification triggers (if the message matches the criteria).
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationRule object.
Optional	@RepeatInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait before re-notifying a subscriber of new messages.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RepeatNotify	In	inherit	smallint (2 bytes)	A flag indicting whether Cisco Unity Connection begins a notification process immediately upon the arrival of each message that matches the specified criteria.
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object that specifies the schedule for this notification rule.

Exceptions

csp_NotificationRuleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName , @NotificationDeviceObjectId , @ScheduleSetObjectId , and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationRule object was not found. The names of the object (Notification rule), table (tbl_NotificationRule), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name for this notification rule to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	Not relevant since there can only be one notification rule per notification device.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.DisplayName." If "tbl_NotificationRule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FailRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object that Cisco Unity Connection will run if attempted notification to the device specified in this rule fails.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.FailRuleObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.FailRuleObjectId." If "tbl_NotificationRule.FailRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InitialDelay

Property Name	Value
Description:	The amount of time (in minutes) from the time a message is received until the message notification triggers (if the message matches the criteria).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.InitialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.InitialDelay." If "tbl_NotificationRule.InitialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NotificationDeviceObjectId

Property Name	Value
Description:	The unique identifier of the NotificationDevice object to use.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.NotificationDeviceObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.NotificationDeviceObjectId." If "tbl_NotificationRule.NotificationDeviceObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.ObjectId." If "tbl_NotificationRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RepeatInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait before re-notifying a subscriber of new messages.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.RepeatInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.RepeatInterval." If "tbl_NotificationRule.RepeatInterval" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RepeatNotify

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection begins a notification process immediately upon the arrival of each message that matches the specified criteria.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.RepeatNotify
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.RepeatNotify." If "tbl_NotificationRule.RepeatNotify" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object that specifies the schedule for this notification rule.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.ScheduleSetObjectId." If "tbl_NotificationRule.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.SubscriberObjectId." If "tbl_NotificationRule.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.204. csp_NotificationRuleCriteriaCreate

Creates a new NotificationRuleCriteria object by inserting a new row into tbl_NotificationRuleCriteria. A NotificationRuleCriteria object specifies the criteria that will trigger a notification rule.

Additional Information

The parameters @NotificationCriteria and @NotificationRuleObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NotificationCriteria	In	inherit	int (4 bytes)	The criteria under which a notification rule will run, such as when there is a pending voice mail message.
Required	@NotificationRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object for which this criteria applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationRuleCriteriaCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@NotificationCriteria and @NotificationRuleObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationCriteria

Property Name	Value
Description:	The criteria under which a notification rule will run, such as when there is a pending voice mail message.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleCriteria.NotificationCriteria
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	NotificationRuleCriteria
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleCriteria.NotificationCriteria." If "tbl_NotificationRuleCriteria.NotificationCriteria" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object for which this criteria applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleCriteria.NotificationRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleCriteria.NotificationRuleObjectId." If "tbl_NotificationRuleCriteria.NotificationRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.205. csp_NotificationRuleCriteriaDelete

Deletes a NotificationRuleCriteria object from tbl_NotificationRuleCriteria as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NotificationCriteria	In	inherit	int (4 bytes)	The criteria under which a notification rule will run, such as when there is a pending voice mail message.
Required	@NotificationRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object for which this criteria applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationRuleCriteriaDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@NotificationCriteria and @NotificationRuleObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationRuleCriteria object was not found. The names of the object (Notification rule criteria), table (tbl_NotificationRuleCriteria), and columns (NotificationCriteria and NotificationRuleObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationRuleCriteria), and the columns (NotificationCriteria and NotificationRuleObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationCriteria

Property Name	Value
Description:	The criteria under which a notification rule will run, such as when there is a pending voice mail message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleCriteria.NotificationCriteria
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	NotificationRuleCriteria
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleCriteria.NotificationCriteria." If "tbl_NotificationRuleCriteria.NotificationCriteria" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object for which this criteria applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleCriteria.NotificationRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleCriteria.NotificationRuleObjectId." If "tbl_NotificationRuleCriteria.NotificationRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.206. csp_NotificationRuleEventCreate

Creates a new NotificationRuleEvent object by inserting a new row into tbl_NotificationRuleEvent. A NotificationRuleEvent object specifies the message notification event for a notification rule that triggers notification rule.

Additional Information

The parameters @NotificationEvent and @NotificationRuleObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NotificationEvent	In	inherit	int (4 bytes)	The actual event to enable for a notification rule, such as for the first urgent voice mail message.
Required	@NotificationRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object for which this event applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationRuleEventCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@NotificationEvent and @NotificationRuleObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@NotificationEvent

Property Name	Value
Description:	The actual event to enable for a notification rule, such as for the first urgent voice mail message.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleEvent.NotificationEvent
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	NotificationRuleEvent
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleEvent.NotificationEvent." If "tbl_NotificationRuleEvent.NotificationEvent" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object for which this event applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleEvent.NotificationRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleEvent.NotificationRuleObjectId." If "tbl_NotificationRuleEvent.NotificationRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.207. csp_NotificationRuleEventDelete

Deletes a NotificationRuleEvent object from tbl_NotificationRuleEvent as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NotificationEvent	In	inherit	int (4 bytes)	The actual event to enable for a notification rule, such as for the first urgent voice mail message.
Required	@NotificationRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object for which this event applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationRuleEventDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@NotificationEvent and @NotificationRuleObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationRuleEvent object was not found. The names of the object (Notification rule event), table (tbl_NotificationRuleEvent), and columns (NotificationEvent and NotificationRuleObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationRuleEvent), and the columns (NotificationEvent and NotificationRuleObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationEvent

Property Name	Value
Description:	The actual event to enable for a notification rule, such as for the first urgent voice mail message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleEvent.NotificationEvent
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	NotificationRuleEvent
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleEvent.NotificationEvent." If "tbl_NotificationRuleEvent.NotificationEvent" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object for which this event applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRuleEvent.NotificationRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRuleEvent.NotificationRuleObjectId." If "tbl_NotificationRuleEvent.NotificationRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.208. csp_NotificationRuleModify

Updates the attributes of a NotificationRule object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationRule object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationRule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name for this notification rule to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@FailRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationRule object that Cisco Unity Connection will run if attempted notification to the device specified in this rule fails.
Optional	@InitialDelay	In	inherit	int (4 bytes)	The amount of time (in minutes) from the time a message is received until the message notification triggers (if the message matches the criteria).
Optional	@NotificationDeviceObjectId	In	inherit	char (36 characters)	The unique identifier of the NotificationDevice object to use.
Optional	@RepeatInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait before re-notifying a subscriber of new messages.
Optional	@RepeatNotify	In	inherit	smallint (2 bytes)	A flag indicting whether Cisco Unity Connection begins a notification process immediately upon the arrival of each message that matches the specified criteria.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object that specifies the schedule for this notification rule.
Optional	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification rule belongs.

Exceptions

csp_NotificationRuleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationRule object was not found. The names of the object (Notification rule), table (tbl_NotificationRule), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name for this notification rule to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	Not relevant since there can only be one notification rule per notification device.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.DisplayName." If "tbl_NotificationRule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FailRuleObjectId

Property Name	Value
Description:	The unique identifier of the NotificationRule object that Cisco Unity Connection will run if attempted notification to the device specified in this rule fails.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.FailRuleObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.FailRuleObjectId." If "tbl_NotificationRule.FailRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InitialDelay

Property Name	Value
Description:	The amount of time (in minutes) from the time a message is received until the message notification triggers (if the message matches the criteria).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.InitialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.InitialDelay." If "tbl_NotificationRule.InitialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NotificationDeviceObjectId

Property Name	Value
Description:	The unique identifier of the NotificationDevice object to use.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.NotificationDeviceObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.NotificationDeviceObjectId." If "tbl_NotificationRule.NotificationDeviceObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectID

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.ObjectId." If "tbl_NotificationRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RepeatInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait before re-notifying a subscriber of new messages.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_NotificationRule.RepeatInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.RepeatInterval." If "tbl_NotificationRule.RepeatInterval" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RepeatNotify

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection begins a notification process immediately upon the arrival of each message that matches the specified criteria.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.RepeatNotify
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.RepeatNotify." If "tbl_NotificationRule.RepeatNotify" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object that specifies the schedule for this notification rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.ScheduleSetObjectId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.ScheduleSetObjectId." If "tbl_NotificationRule.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationRule.SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationRule.SubscriberObjectId." If "tbl_NotificationRule.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.209. csp_PersonalContactCreate

Creates a new PersonalContact object for a user by inserting a new row into tbl_PersonalContact.

Additional Information

The parameter @UserObjectId must be provided.

DisplayName is no longer required parameter. See CSCsh41143.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this personal contact belongs.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when any of the phone numbers for this contact are dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of this personal contact in a groupware package (for synchronization).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the personal contact to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The e-mail address (outbound) of the personal contact.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of a personal contact. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of a personal contact, by which a person is commonly known.
Optional	@NickName	In	inherit	nvarchar (64 characters)	The name a user might give for a particular personal contact name that might be hard to pronounce or how they often refer to someone (i.e. Nicholas might be Nick).
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.

Exceptions

csp_PersonalContactCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AltFirstName

Property Name	Value
Description:	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.AltFirstName." If "tbl_PersonalContact.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.AltLastName." If "tbl_PersonalContact.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when any of the phone numbers for this contact are dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.ClientMatterCode." If "tbl_PersonalContact.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of this personal contact in a groupware package (for synchronization).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.DirectoryId." If "tbl_PersonalContact.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the personal contact to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.DisplayName." If "tbl_PersonalContact.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The e-mail address (outbound) of the personal contact.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.EmailAddress." If "tbl_PersonalContact.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of a personal contact. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.FirstName." If "tbl_PersonalContact.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of a personal contact, by which a person is commonly known.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.LastName." If "tbl_PersonalContact.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NickName

Property Name	Value
Description:	The name a user might give for a particular personal contact name that might be hard to pronounce or how they often refer to someone (i.e. Nicholas might be Nick).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.NickName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.NickName." If "tbl_PersonalContact.NickName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.ObjectId." If "tbl_PersonalContact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this personal contact belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.UserObjectId." If "tbl_PersonalContact.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.210. csp_PersonalContactDelete

Deletes a PersonalContact object from tbl_PersonalContact as specified by the @ObjectId parameter.

Additional Information

This stored procedure will also delete any existing phones for this PersonalContact from the tbl_PersonalContactPhone table.

If this PersonalContact is a member of a PersonalGroup, its membership in the group will be removed (i.e. all rows in tbl_PersonalGroupMember matching specified PersonalContact.ObjectId are deleted). If this PersonalContact has any associated PersonaRuleCaller objects, they are also removed from tbl_PersonalRuleCaller.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalContactDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalContact object was not found. The names of the object (Personal contact), table (tbl_PersonalContact), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalContact), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.ObjectId." If "tbl_PersonalContact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.211. csp_PersonalContactModify

Updates the attributes of a PersonalContact object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalContact object that is updated.

Additional Information

The owner (i.e. User) of a personal contact cannot be changed once it has been created.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when any of the phone numbers for this contact are dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of this personal contact in a groupware package (for synchronization).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the personal contact to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The e-mail address (outbound) of the personal contact.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of a personal contact. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of a personal contact, by which a person is commonly known.
Optional	@NickName	In	inherit	nvarchar (64 characters)	The name a user might give for a particular personal contact name that might be hard to pronounce or how they often refer to someone (i.e. Nicholas might be Nick).

Exceptions

csp_PersonalContactModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalContact object was not found. The names of the object (Personal contact), table (tbl_PersonalContact), and column (ObjectId) are included with the exception message.

Parameter Properties

@AltFirstName

Property Name	Value
Description:	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.AltFirstName." If "tbl_PersonalContact.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.AltLastName." If "tbl_PersonalContact.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when any of the phone numbers for this contact are dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.ClientMatterCode." If "tbl_PersonalContact.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of this personal contact in a groupware package (for synchronization).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.DirectoryId." If "tbl_PersonalContact.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the personal contact to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.DisplayName." If "tbl_PersonalContact.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The e-mail address (outbound) of the personal contact.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.EmailAddress." If "tbl_PersonalContact.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of a personal contact. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.FirstName." If "tbl_PersonalContact.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of a personal contact, by which a person is commonly known.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.LastName." If "tbl_PersonalContact.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NickName

Property Name	Value
Description:	The name a user might give for a particular personal contact name that might be hard to pronounce or how they often refer to someone (i.e. Nicholas might be Nick).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.NickName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.NickName." If "tbl_PersonalContact.NickName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalContact object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_PersonalContact.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContact.ObjectId." If "tbl_PersonalContact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.212. csp_PersonalContactPhoneCreate

Creates a new PhoneNumber object for a PersonContact by inserting a new row into tbl_PersonalContactPhone.

Additional Information

The parameters @PhoneNumber, @Phonetype, and @PersonalContactObjectId must be provided.

The phone number doesn't have to be unique within the user's personal group.

Business Rules

The phone number doesn't have to be unique within the user's personal group.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalContactObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalContact object to which this phone number belongs.
Required	@PhoneNumber	In	inherit	varchar (255 characters)	The phone number.
Required	@PhoneType	In	inherit	smallint (2 bytes)	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DialablePhoneNumber	In	inherit	varchar (255 characters)	Dialable version of the phone number, including any special codes for outside access if needed.
Optional	@SearchablePhoneNumber	In	inherit	varchar (255 characters)	Phone number without formatting or any dial codes. A basic form suitable for searching on.

Exceptions

csp_PersonalContactPhoneCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@PersonalContactObjectId, @PhoneNumber, and @PhoneType) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DialablePhoneNumber

Property Name	Value
Description:	Dialable version of the phone number, including any special codes for outside access if needed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.DialablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DialablePhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.DialablePhoneNumber." If "tbl_PersonalContactPhone.DialablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PersonalContactObjectId

Property Name	Value
Description:	The unique identifier of the PersonalContact object to which this phone number belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PersonalContactObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PersonalContactObjectId." If "tbl_PersonalContactPhone.PersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PhoneNumber
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PhoneNumber." If "tbl_PersonalContactPhone.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneType

Property Name	Value
Description:	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PhoneType
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PhoneType
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PhoneType." If "tbl_PersonalContactPhone.PhoneType" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@SearchablePhoneNumber

Property Name	Value
Description:	Phone number without formatting or any dial codes. A basic form suitable for searching on.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.SearchablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.SearchablePhoneNumber." If "tbl_PersonalContactPhone.SearchablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.213. csp_PersonalContactPhoneDelete

Deletes a PersonalContactPhone object from tbl_PersonalContactPhone as specified by the @PersonalObjectId and @PhoneType parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalContactObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalContact object to which this phone number belongs.
Required	@PhoneType	In	inherit	smallint (2 bytes)	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalContactPhoneDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@PersonalContactObjectId and @PhoneType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalContactPhone object was not found. The names of the object (Personal contact phone), table (tbl_PersonalContactPhone), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalContactPhone), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PersonalContactObjectId

Property Name	Value
Description:	The unique identifier of the PersonalContact object to which this phone number belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PersonalContactObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PersonalContactObjectId." If "tbl_PersonalContactPhone.PersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PhoneType

Property Name	Value
Description:	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PhoneType
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PhoneType
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PhoneType." If "tbl_PersonalContactPhone.PhoneType" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

6.214. csp_PersonalContactPhoneModify

Updates the attributes of a PersonalContactPhone object based on the values passed in via the parameters. The @PersonalContactObjectId, @PhoneNumber, and @PhoneType parameters identify the PersonalContactPhone object that is updated.

Additional Information

The owner of a phone number (PersonalContact) cannot be modified.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalContactObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalContact object to which this phone number belongs.
Required	@PhoneNumber	In	inherit	varchar (255 characters)	The phone number.
Required	@PhoneType	In	inherit	smallint (2 bytes)	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DialablePhoneNumber	In	inherit	varchar (255 characters)	Dialable version of the phone number, including any special codes for outside access if needed.
Optional	@SearchablePhoneNumber	In	inherit	varchar (255 characters)	Phone number without formatting or any dial codes. A basic form suitable for searching on.

Exceptions

csp_PersonalContactPhoneModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@PersonalContactObjectId, @PhoneNumber, and @PhoneType) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalContactPhone object was not found. The names of the object (Personal contact phone), table (tbl_PersonalContactPhone), and columns (PersonalContactObjectId, PhoneType) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DialablePhoneNumber

Property Name	Value
Description:	Dialable version of the phone number, including any special codes for outside access if needed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.DialablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DialablePhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.DialablePhoneNumber." If "tbl_PersonalContactPhone.DialablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PersonalContactObjectId

Property Name	Value
Description:	The unique identifier of the PersonalContact object to which this phone number belongs.
Notes:	The owner of a phone number (PersonalContact) cannot be modified.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PersonalContactObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PersonalContactObjectId." If "tbl_PersonalContactPhone.PersonalContactObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PhoneNumber

Property Name	Value
Description:	The phone number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PhoneNumber
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PhoneNumber." If "tbl_PersonalContactPhone.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneType

Property Name	Value
Description:	The type of phone to which this number applies. For example: "Home," "Business," "Mobile," etc.
Notes:	This parameter needs to be passed in but in can also be modified.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.PhoneType
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PhoneType
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.PhoneType." If "tbl_PersonalContactPhone.PhoneType" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@SearchablePhoneNumber

Property Name	Value
Description:	Phone number without formatting or any dial codes. A basic form suitable for searching on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalContactPhone.SearchablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalContactPhone.SearchablePhoneNumber." If "tbl_PersonalContactPhone.SearchablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.215. csp_PersonalDestinationCreate

Creates a new PersonalDestination object for a user by inserting a new row into tbl_PersonalDestination.

Additional Information

The parameters @Name, @PhoneNumber and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal destination to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Required	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number of the destination.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this destination belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallPickupTimeout	In	inherit	int (4 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@DetectTransferLoop	In	inherit	smallint (2 bytes)	A flag indicating whether Unity can do a loop detect transfer to this device.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should transmit a Forced Authorization Code (FAC) to Cisco Unified Communications Manager after this number is dialed during an outbound call.

Exceptions

csp_PersonalDestinationCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name, @PhoneNumber, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.CallPickupTimeout." If "tbl_PersonalDestination.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DetectTransferLoop

Property Name	Value
Description:	A flag indicating whether Unity can do a loop detect transfer to this device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.DetectTransferLoop
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.DetectTransferLoop." If "tbl_PersonalDestination.DetectTransferLoop" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal destination to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.Name." If "tbl_PersonalDestination.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.ObjectId." If "tbl_PersonalDestination.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number of the destination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.PhoneNumber
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.PhoneNumber." If "tbl_PersonalDestination.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this destination belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.SubscriberObjectId." If "tbl_PersonalDestination.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should transmit a Forced Authorization Code (FAC) to Cisco Unified Communications Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.TransmitForcedAuthorizationCode." If "tbl_PersonalDestination.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.216. csp_PersonalDestinationDelete

Deletes a PersonalDestination object from tbl_PersonalDestination as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalDestinationDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalDestination object was not found. The names of the object (Personal destination), table (tbl_PersonalDestination), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalDestination), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.ObjectId." If "tbl_PersonalDestination.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.217. csp_PersonalDestinationGroupCreate

Creates a new PersonalDestinationGroup object for a user by inserting a new row into tbl_PersonalDestinationGroup.

Additional Information

The parameters @Name and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal destination group to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this personal destination group belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.

Exceptions

csp_PersonalDestinationGroupCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal destination group to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.Name." If "tbl_PersonalDestinationGroup.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.ObjectId." If "tbl_PersonalDestinationGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this personal destination group belongs.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.SubscriberObjectId." If "tbl_PersonalDestinationGroup.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.218. csp_PersonalDestinationGroupDelete

Deletes a PersonalDestinationGroup object from tbl_PersonalDestinationGroup as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalDestinationGroupDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalDestinationGroup object was not found. The names of the object (Personal destination group), table (tbl_PersonalDestinationGroup), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalDestinationGroup), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.ObjectId." If "tbl_PersonalDestinationGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.219. csp_PersonalDestinationGroupItemCreate

Creates a new PersonalDestinationGroupItem object by inserting a new row into tbl_PersonalDestinationGroupItem.

Additional Information

The parameters @ItemIndex and @PersonalDestinationGroupObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ItemIndex	In	inherit	smallint (2 bytes)	The order in which the destinations in a group will be used. The order is from the lowest number to the highest.
Required	@PersonalDestinationGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalDestinationGroup to which this member belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DestDtmfAccessIdObjectId	In	inherit	char (36 characters)	The destination for this personal rule. If the destination is a DtmfAccessId, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId. Otherwise, this attribute is set to NULL.
Optional	@DestNotificationDeviceObjectId	In	inherit	char (36 characters)	The destination for this personal rule. If the destination is a notification device, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice. Otherwise, this attribute is set to NULL.
Optional	@DestPersonalDestinationObjectId	In	inherit	char (36 characters)	The destination for this personal rule. If the destination is another personal destination object, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DestPhoneNumberObjectId	In	inherit	char (36 characters)	The destination for this personal rule. If the destination is a phone number, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber. Otherwise, this attribute is set to NULL.
Optional	@ObjectId	Out	inherit	char (36 characters)	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.

Exceptions

csp_PersonalDestinationGroupItemCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ItemIndex and @PersonalDestinationGroupObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DestDtmfAccessIdObjectId

Property Name	Value
Description:	The destination for this personal rule. If the destination is a DtmfAccessId, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.DestDtmfAccessIdObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.DestDtmfAccessIdObjectId." If "tbl_PersonalDestinationGroupItem.DestDtmfAccessIdObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestNotificationDeviceObjectId

Property Name	Value
Description:	The destination for this personal rule. If the destination is a notification device, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.DestNotificationDeviceObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.DestNotificationDeviceObjectId." If "tbl_PersonalDestinationGroupItem.DestNotificationDeviceObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPersonalDestinationObjectId

Property Name	Value
Description:	The destination for this personal rule. If the destination is another personal destination object, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.DestPersonalDestinationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.DestPersonalDestinationObjectId." If "tbl_PersonalDestinationGroupItem.DestPersonalDestinationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPhoneNumberObjectId

Property Name	Value
Description:	The destination for this personal rule. If the destination is a phone number, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.DestPhoneNumberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.DestPhoneNumberObjectId." If "tbl_PersonalDestinationGroupItem.DestPhoneNumberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ItemIndex

Property Name	Value
Description:	The order in which the destinations in a group will be used. The order is from the lowest number to the highest.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.ItemIndex
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.ItemIndex." If "tbl_PersonalDestinationGroupItem.ItemIndex" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.ObjectId." If "tbl_PersonalDestinationGroupItem.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalDestinationGroupObjectId

Property Name	Value
Description:	The unique identifier of the PersonalDestinationGroup to which this member belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.PersonalDestinationGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.PersonalDestinationGroupObjectId." If "tbl_PersonalDestinationGroupItem.PersonalDestinationGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.220. csp_PersonalDestinationGroupItemDelete

Deletes a PersonalDestinationGroupItem object from tbl_PersonalDestinationGroupItem as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalDestinationGroupItemDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalDestinationGroupItem object was not found. The names of the object (Personal destination group item), table (tbl_PersonalDestinationGroupItem), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalDestinationGroupItem), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.ObjectId." If "tbl_PersonalDestinationGroupItem.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.221. csp_PersonalDestinationGroupItemModify

Updates the attributes of a PersonalDestinationGroupItem object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalDestinationGroupItem object that is updated.

Additional Information

This procedure does not update the properties of the Dest* columns of tbl_PersonalDestinationGroupItem.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ItemIndex	In	inherit	smallint (2 bytes)	The order in which the destinations in a group will be used. The order is from the lowest number to the highest.

Exceptions

csp_PersonalDestinationGroupItemModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalDestinationGroupItem object was not found. The names of the object (Personal destination group item), table (tbl_PersonalDestinationGroupItem), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ItemIndex

Property Name	Value
Description:	The order in which the destinations in a group will be used. The order is from the lowest number to the highest.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.ItemIndex
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.ItemIndex." If "tbl_PersonalDestinationGroupItem.ItemIndex" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The surrogate key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroupItem object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroupItem.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroupItem.ObjectId." If "tbl_PersonalDestinationGroupItem.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.222. csp_PersonalDestinationGroupModify

Updates the attributes of a PersonalDestinationGroup object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalDestinationGroup object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal destination group to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Optional	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this personal destination group belongs.

Exceptions

csp_PersonalDestinationGroupModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalDestinationGroup object was not found. The names of the object (Personal destination group), table (tbl_PersonalDestinationGroup), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal destination group to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.Name." If "tbl_PersonalDestinationGroup.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestinationGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.ObjectId." If "tbl_PersonalDestinationGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this personal destination group belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestinationGroup.SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestinationGroup.SubscriberObjectId." If "tbl_PersonalDestinationGroup.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.223. csp_PersonalDestinationModify

Updates the attributes of a PersonalDestination object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalDestination object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallPickupTimeout	In	inherit	int (4 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@DetectTransferLoop	In	inherit	smallint (2 bytes)	A flag indicating whether Unity can do a loop detect transfer to this device.
Optional	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal destination to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Optional	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number of the destination.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should transmit a Forced Authorization Code (FAC) to Cisco Unified Communications Manager after this number is dialed during an outbound call.

Exceptions

csp_PersonalDestinationModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalDestination object was not found. The names of the object (Personal destination), table (tbl_PersonalDestination), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.CallPickupTimeout." If "tbl_PersonalDestination.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DetectTransferLoop

Property Name	Value
Description:	A flag indicating whether Unity can do a loop detect transfer to this device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.DetectTransferLoop
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.DetectTransferLoop." If "tbl_PersonalDestination.DetectTransferLoop" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal destination to be used when displaying entries for administrative purposes such as in Cisco Personal Communications Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.Name." If "tbl_PersonalDestination.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalDestination object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.ObjectId." If "tbl_PersonalDestination.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number of the destination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.PhoneNumber." If "tbl_PersonalDestination.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should transmit a Forced Authorization Code (FAC) to Cisco Unified Communications Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalDestination.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalDestination.TransmitForcedAuthorizationCode." If "tbl_PersonalDestination.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.224. csp_PersonalGroupCreate

Creates a new PersonalGroup object for a user by inserting a new row into tbl_PersonalGroup. A PersonalGroup can contain users, personal contacts, other personal groups, and even distribution lists. To create a "personal voicemail list," use csp_PersonalVoiceMailListCreate.

Additional Information

The parameters @Alias, @DisplayName, and @UserObjectId must be provided.

An Alias object is created in the tbl_Alias table by calling csp_AliasCreate. To ensure that the alias for a PersonalGroup is unique, it is constructed as follows:

<UserAlias> + '_' + <PersonalGroupObjectId>. UserAlias is truncated to 28 characters to avoid overflow.

The Alias.SmtpAddress property is formed <UserAlias> + '_' + 'List' + '_' + <NumericId> + '@' + <Domain>. For example, if JSmith creates a PersonalGroup with NumericId of 1, the SmtpAddress would be: JSmith_List_1@cisco.com

If the @VoiceName is provided, a stream file is also created.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this group belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsVoiceMailList	In	inherit	smallint (2 bytes)	A flag indicating whether this a voice mail distribution list.
Optional	@NumericId	In	inherit	nvarchar (4 characters)	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this personal group (if voice name has already been recorded).

Exceptions

csp_PersonalGroupCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName, @Alias, and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.
1120	EXCEPTION_PERSONALGROUP_NUMERICID_DUPLICATE	The NumericId as specified by @NumericId already exists for the User specified by @UserObjectId. The NumericId of a personal voice mail list must be unique for the user to which it belongs.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsVoiceMailList

Property Name	Value
Description:	A flag indicating whether this a voice mail distribution list.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.IsVoiceMailList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.IsVoiceMailList." If "tbl_PersonalGroup.IsVoiceMailList" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NumericId

Property Name	Value
Description:	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Notes:	If @NumericID is not NULL, @NumericId is appended to the user's alias to generate the SMTPAddress for the personal group.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.NumericId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (4 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.NumericId." If "tbl_PersonalGroup.NumericId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this group belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.UserId." If "tbl_PersonalGroup.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this personal group (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.225. csp_PersonalGroupDelete

Deletes a PersonalGroup object from tbl_PersonalGroup as specified by the @ObjectId parameter.

Additional Information

Member mappings in tbl_PersonalGroupMember will automatically be deleted (SQL cascade delete). Also any member mappings where this group is the member of another group will automatically be deleted.

The Alias associated with this PersonalGroup will be deleted from tbl_Alias. Also if a stream file exists for this PersonalGroup, it will be deleted from tbl_StreamFile.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalGroupDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalGroup object was not found. The names of the object (PersonalGroup), table (tbl_PersonalGroup), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalGroup), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.226. csp_PersonalGroupMemberCreate

Adds a new member (user, personal contact, distribution list, or another personal group) by inserting a new row into tbl_PersonalGroupMember.

Additional Information

The parameter @PersonalGroupObjectId must be provided. In addition, one of the following parameters must also be provided:

- @MemberUserObjectId
- @MemberDistributionListObjectId
- @MemberPersonalContactObjectId
- @MemberPersonalGroupObjectId

One of the @Member* parameters must contain a valid member, while the remaining @Member* parameters contains a value of NULL.

This procedure executes csp_PersonalGroupMemberSetRebuild, which rebuilds a flattened list of members.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalGroup object to which this member belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MemberContactObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in tbl_Contact. Otherwise, this attribute is set ot NULL.
Optional	@MemberDistributionListObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a distribution list, the unique identifier of the corresponding DistributionList object in tbl_DistributionList. Otherwise, this attribute is set ot NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MemberPersonalContactObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a personal contact, the unique identifier of the corresponding PersonalContact object in tbl_PersonalContact. Otherwise, this attribute is set to NULL.
Optional	@MemberPersonalGroupObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in tbl_PersonalGroup. Otherwise, this attribute is set to NULL.
Optional	@MemberUserObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set to NULL.
Optional	@ObjectId	Out	inherit	char (36 characters)	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.

Exceptions

csp_PersonalGroupMemberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that cause this exception to be thrown: 1. The value of the required parameter @PersonalGroupObjectId is NULL. The name of the missing parameter is included with the exception message. 2. From csp_PersonalGroupMemberSetRebuild - The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1035	EXCEPTION_OBJECT_INVALID_OWNER	The user does not own the personal contact.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MemberContactObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in tbl_Contact. Otherwise, this attribute is set to NULL.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberContactObjectId." If "tbl_PersonalGroupMember.MemberContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberDistributionListObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a distribution list, the unique identifier of the corresponding DistributionList object in tbl_DistributionList. Otherwise, this attribute is set of NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberDistributionListObjectId." If "tbl_PersonalGroupMember.MemberDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberPersonalContactObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a personal contact, the unique identifier of the corresponding PersonalContact object in tbl_PersonalContact. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberPersonalContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberPersonalContactObjectId." If "tbl_PersonalGroupMember.MemberPersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberPersonalGroupObjectId

Property Name	Value
Description:	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in tbl_PersonalGroup. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberPersonalGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberPersonalGroupObjectId." If "tbl_PersonalGroupMember.MemberPersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberUserObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberUserObjectId." If "tbl_PersonalGroupMember.MemberUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.ObjectId." If "tbl_PersonalGroupMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalGroupObjectId

Property Name	Value
Description:	The unique identifier of the PersonalGroup object to which this member belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.PersonalGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.PersonalGroupObjectId." If "tbl_PersonalGroupMember.PersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.227. csp_PersonalGroupMemberDelete

Deletes a PersonalGroupMember object from tbl_PersonalGroupMember as specified by the @ObjectId parameter.

Additional Information

This procedure executes csp_PersonalGroupMemberSetRebuild, which rebuilds a flattened list of members.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalGroupMemberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that cause this exception to be thrown: 1. The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message. 2. From csp_PersonalGroupMemberSetRebuild - The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalGroupMember object was not found. The names of the object (Personal group member), table (tbl_PersonalGroupMember), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalGroupMember), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.ObjectId." If "tbl_PersonalGroupMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.228. csp_PersonalGroupModify

Updates the attributes of a PersonalGroup object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalGroup object that is updated.

Additional Information

If the @VoiceName is provided, a check is made to determine if a stream file already exists for this PersonalGroup. If a stream file does exist, it is deleted, and then a new stream file is created. Otherwise a new stream file is created.

Note that this procedure does not update the Alias in tbl_Alias.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@IsVoiceMailList	In	inherit	smallint (2 bytes)	A flag indicating whether this a voice mail distribution list.
Optional	@NumericId	In	inherit	nvarchar (4 characters)	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this personal group.

Exceptions

csp_PersonalGroupModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalGroup object was not found. The names of the object (PersonalGroup), table (tbl_PersonalGroup), and column (ObjectId) are included with the exception message.
1120	EXCEPTION_PERSONALGROUP_NUMERICID_DUPLICATE	The NumericId as specified by @NumericId already exists for the User specified by @UserObjectId. The NumericId of a personal voice mail list must be unique for the user to which it belongs.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsVoiceMailList

Property Name	Value
Description:	A flag indicating whether this a voice mail distribution list.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.IsVoiceMailList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.IsVoiceMailList." If "tbl_PersonalGroup.IsVoiceMailList" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NumericId

Property Name	Value
Description:	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.NumericId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (4 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.NumericId." If "tbl_PersonalGroup.NumericId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this personal group.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.229. csp_PersonalRuleCallerCreate

Creates a new PersonalRuleCaller object for a subscriber by inserting a new row into tbl_PersonalRuleCaller.

Additional Information

The parameters @PersonalRuleObjectId and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalRuleObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalRule object associated with this caller.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this personal rule caller belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallerANI	In	inherit	nvarchar (40 characters)	The phone number of the caller (i.e., Caller ID) for callers that don't already exist elsewhere in the Cisco Unity Connection database.
Optional	@CallerContactObjectId	In	inherit	char (36 characters)	The unique identifier of a Contact object.
Optional	@CallerPersonalContactObjectId	In	inherit	char (36 characters)	The unique identifier of the a PersonalContact object.
Optional	@CallerPersonalGroupObjectId	In	inherit	char (36 characters)	The unique identifier of a PersonalGroup object
Optional	@CallerUserObjectId	In	inherit	char (36 characters)	The unique identifier of a User object.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.

Exceptions

csp_PersonalRuleCallerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@PersonalRuleObjectId and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallerANI

Property Name	Value
Description:	The phone number of the caller (i.e., Caller ID) for callers that don't already exist elsewhere in the Cisco Unity Connection database.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerANI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerANI." If "tbl_PersonalRuleCaller.CallerANI" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallerContactObjectId

Property Name	Value
Description:	The unique identifier of a Contact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerContactObjectId." If "tbl_PersonalRuleCaller.CallerContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CallerPersonalContactObjectId

Property Name	Value
Description:	The unique identifier of the a PersonalContact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerPersonalContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerPersonalContactObjectId." If "tbl_PersonalRuleCaller.CallerPersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallerPersonalGroupObjectId

Property Name	Value
Description:	The unique identifier of a PersonalGroup object
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerPersonalGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerPersonalGroupObjectId." If "tbl_PersonalRuleCaller.CallerPersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallerUserObjectId

Property Name	Value
Description:	The unique identifier of a User object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerUserObjectId." If "tbl_PersonalRuleCaller.CallerUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.ObjectId." If "tbl_PersonalRuleCaller.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalRuleObjectId

Property Name	Value
Description:	The unique identifier of the PersonalRule object associated with this caller.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.PersonalRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.PersonalRuleObjectId." If "tbl_PersonalRuleCaller.PersonalRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this personal rule caller belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.SubscriberObjectId." If "tbl_PersonalRuleCaller.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.230. csp_PersonalRuleCallerDelete

Deletes a PersonalRuleCaller object from tbl_PersonalRuleCaller as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalRuleCallerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalRuleCaller object was not found. The names of the object (Personal rule caller), table (tbl_PersonalRuleCaller), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalRuleCaller), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.ObjectId." If "tbl_PersonalRuleCaller.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.231. csp_PersonalRuleCallerModify

Updates the CallerANI property of a PersonalRuleCaller object based on the value passed in via the parameters. The @ObjectId parameter identifies the PersonalRuleCaller object that is updated.

Additional Information

Only updates the CallerANI column in tbl_PersonalRuleCaller.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallerANI	In	inherit	nvarchar (40 characters)	The phone number of the caller (i.e., Caller ID) for callers that don't already exist elsewhere in the Cisco Unity Connection database.

Exceptions

csp_PersonalRuleCallerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalRuleCaller object was not found. The names of the object (Personal rule caller), table (tbl_PersonalRuleCaller), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallerANI

Property Name	Value
Description:	The phone number of the caller (i.e., Caller ID) for callers that don't already exist elsewhere in the Cisco Unity Connection database.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.CallerANI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.CallerANI." If "tbl_PersonalRuleCaller.CallerANI" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleCaller object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleCaller.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleCaller.ObjectId." If "tbl_PersonalRuleCaller.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.232. csp_PersonalRuleCreate

Creates a new PersonalRule object for a subscriber by inserting a new row into tbl_PersonalRule.

Additional Information

The parameters @PersonalRuleSetObjectId, @RuleIndex, and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalRuleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalRuleSet object to which this personal rule belongs.
Required	@RuleIndex	In	inherit	smallint (2 bytes)	The order in which rules within a rule set are executed.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this rule belongs.
Optional	@AlwaysTriggerPage	In	inherit	smallint (2 bytes)	A flag indicating whether the rule should always trigger a pager notification device associated with this rule.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code (CMC) to transmit to Cisco Unified Communications Manager when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign accounting or billing codes to the call.
Optional	@DestCallActionObjectId	In	inherit	char (36 characters)	The unique identifier of the CallAction object used to route the call.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DestDtmfAccessIdObjectId	In	inherit	char (36 characters)	The destination (DtmfAccessId) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId.
Optional	@DestNotificationDeviceObjectId	In	inherit	char (36 characters)	The destination (NotificationDevice) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice.
Optional	@DestPersonalDestinationGroupObjectId	In	inherit	char (36 characters)	The destination (PersonalDestinationGroup) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestinationGroup object in tbl_PersonalDestinationGroup.
Optional	@DestPersonalDestinationObjectId	In	inherit	char (36 characters)	The destination (PersonalDestination) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination.
Optional	@DestPhoneNumberObjectId	In	inherit	char (36 characters)	The destination (PhoneNumber) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber.
Optional	@InMeeting	In	inherit	smallint (2 bytes)	A flag indicating whether the rule is triggered depending on whether the subscriber is in a meeting or not.
Optional	@IsInclusive	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should AND or OR the different types of rules defined in tbl_PersonalRuleCaller for a subscriber.
Optional	@IsInternal	In	inherit	smallint (2 bytes)	A flag indicating whether the rule should trigger based on whether the caller is internal or external.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.
Optional	@RingAllDestinationsAtOnce	In	inherit	smallint (2 bytes)	A flag indicating whether all rule destinations should be dialed simultaneously or sequentially.
Optional	@ScreenCall	In	inherit	smallint (2 bytes)	A flag indicating whether the incoming call should be screened.
Optional	@TimeRangeEnd	In	inherit	int (4 bytes)	The end time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Optional	@TimeRangeIndicatesActiveHours	In	inherit	int (4 bytes)	The definition for how a time range should be utilized.
Optional	@TimeRangeStart	In	inherit	int (4 bytes)	The start time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.

Exceptions

csp_PersonalRuleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@PersonalRuleSetObjectId, @RuleIndex, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AlwaysTriggerPage

Property Name	Value
Description:	A flag indicating whether the rule should always trigger a pager notification device associated with this rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.AlwaysTriggerPage
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.AlwaysTriggerPage." If "tbl_PersonalRule.AlwaysTriggerPage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code (CMC) to transmit to Cisco Unified Communications Manager when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign accounting or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ClientMatterCode." If "tbl_PersonalRule.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestCallActionObjectId

Property Name	Value
Description:	The unique identifier of the CallAction object used to route the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestCallActionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestCallActionObjectId." If "tbl_PersonalRule.DestCallActionObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestDtmfAccessIdObjectId

Property Name	Value
Description:	The destination (DtmfAccessId) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestDtmfAccessIdObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestDtmfAccessIdObjectId." If "tbl_PersonalRule.DestDtmfAccessIdObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestNotificationDeviceObjectId

Property Name	Value
Description:	The destination (NotificationDevice) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestNotificationDeviceObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestNotificationDeviceObjectId." If "tbl_PersonalRule.DestNotificationDeviceObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPersonalDestinationGroupObjectId

Property Name	Value
Description:	The destination (PersonalDestinationGroup) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestinationGroup object in tbl_PersonalDestinationGroup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPersonalDestinationGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPersonalDestinationGroupObjectId." If "tbl_PersonalRule.DestPersonalDestinationGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPersonalDestinationObjectId

Property Name	Value
Description:	The destination (PersonalDestination) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPersonalDestinationObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPersonalDestinationObjectId." If "tbl_PersonalRule.DestPersonalDestinationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPhoneNumberObjectId

Property Name	Value
Description:	The destination (PhoneNumber) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPhoneNumberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPhoneNumberObjectId." If "tbl_PersonalRule.DestPhoneNumberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InMeeting

Property Name	Value
Description:	A flag indicating whether the rule is triggered depending on whether the subscriber is in a meeting or not.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_PersonalRule.InMeeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleMeetingCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.InMeeting." If "tbl_PersonalRule.InMeeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsInclusive

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should AND or OR the different types of rules defined in tbl_PersonalRuleCaller for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.IsInclusive
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleCallerInclusiveCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.IsInclusive." If "tbl_PersonalRule.IsInclusive" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsInternal

Property Name	Value
Description:	A flag indicating whether the rule should trigger based on whether the caller is internal or external.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.IsInternal
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleCallerInternalCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.IsInternal." If "tbl_PersonalRule.IsInternal" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ObjectId." If "tbl_PersonalRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalRuleSetObjectId

Property Name	Value
Description:	The unique identifier of the PersonalRuleSet object to which this personal rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.PersonalRuleSetObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.PersonalRuleSetObjectId." If "tbl_PersonalRule.PersonalRuleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RingAllDestinationsAtOnce

Property Name	Value
Description:	A flag indicating whether all rule destinations should be dialed simultaneously or sequentially.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.RingAllDestinationsAtOnce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.RingAllDestinationsAtOnce." If "tbl_PersonalRule.RingAllDestinationsAtOnce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RuleIndex

Property Name	Value
Description:	The order in which rules within a rule set are executed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.RuleIndex
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.RuleIndex." If "tbl_PersonalRule.RuleIndex" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScreenCall

Property Name	Value
Description:	A flag indicating whether the incoming call should be screened.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ScreenCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ScreenCall." If "tbl_PersonalRule.ScreenCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.SubscriberObjectId." If "tbl_PersonalRule.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeEnd

Property Name	Value
Description:	The end time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeEnd
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeEnd." If "tbl_PersonalRule.TimeRangeEnd" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeIndicatesActiveHours

Property Name	Value
Description:	The definition for how a time range should be utilized.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeIndicatesActiveHours
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	PersonalRuleTimeRangeType
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeIndicatesActiveHours." If "tbl_PersonalRule.TimeRangeIndicatesActiveHours" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeStart

Property Name	Value
Description:	The start time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeStart." If "tbl_PersonalRule.TimeRangeStart" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.233. csp_PersonalRuleDelete

Deletes a PersonalRule object from tbl_PersonalRule as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalRuleDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalRule object was not found. The names of the object (Personal rule), table (tbl_PersonalRule), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalRule), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ObjectId." If "tbl_PersonalRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.234. csp_PersonalRuleIndexSwap

Swaps the indexes of two personal rules. The rule index controls the order in which rules will be executed within a personal rule set.

Additional Information

Clients use this to move personal rules up and down within a user's personal rules list.

The parameters @ObjectId1 and @ObjectId2 must me provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId1	In	ignore	char (36 characters)	The ObjectId of the first rule.
Required	@ObjectId2	In	ignore	char (36 characters)	The ObjectId of the second rule.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalRuleIndexSwap will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ObjectId1 and @ObjectId2) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalRule object was not found. The names of the object (Routing Rule), table (tbl_PersonalRule), and column (ObjectId1 or ObjectId2) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId1

Property Name	Value
Description:	The ObjectId of the first rule.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectID2

Property Name	Value
Description:	The ObjectID of the second rule.
Notes:	An ObjectID is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.235. csp_PersonalRuleModify

Updates the attributes of a PersonalRule object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalRule object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.
Optional	@AlwaysTriggerPage	In	inherit	smallint (2 bytes)	A flag indicating whether the rule should always trigger a pager notification device associated with this rule.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code (CMC) to transmit to Cisco Unified Communications Manager when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign accounting or billing codes to the call.
Optional	@DestCallActionObjectId	In	inherit	char (36 characters)	The unique identifier of the CallAction object used to route the call.
Optional	@DestDtmfAccessIdObjectId	In	inherit	char (36 characters)	The destination (DtmfAccessId) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DestNotificationDeviceObjectId	In	inherit	char (36 characters)	The destination (NotificationDevice) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice.
Optional	@DestPersonalDestinationGroupObjectId	In	inherit	char (36 characters)	The destination (PersonalDestinationGroup) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestinationGroup object in tbl_PersonalDestinationGroup.
Optional	@DestPersonalDestinationObjectId	In	inherit	char (36 characters)	The destination (PersonalDestination) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination.
Optional	@DestPhoneNumberObjectId	In	inherit	char (36 characters)	The destination (PhoneNumber) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber.
Optional	@InMeeting	In	inherit	smallint (2 bytes)	A flag indicating whether the rule is triggered depending on whether the subscriber is in a meeting or not.
Optional	@IsInclusive	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should AND or OR the different types of rules defined in tbl_PersonalRuleCaller for a subscriber.
Optional	@IsInternal	In	inherit	smallint (2 bytes)	A flag indicating whether the rule should trigger based on whether the caller is internal or external.
Optional	@RingAllDestinationsAtOnce	In	inherit	smallint (2 bytes)	A flag indicating whether all rule destinations should be dialed simultaneously or sequentially.
Optional	@RuleIndex	In	inherit	smallint (2 bytes)	The order in which rules within a rule set are executed.
Optional	@ScreenCall	In	inherit	smallint (2 bytes)	A flag indicating whether the incoming call should be screened.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TimeRangeEnd	In	inherit	int (4 bytes)	The end time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Optional	@TimeRangeIndicatesActiveHours	In	inherit	int (4 bytes)	The definition for how a time range should be utilized.
Optional	@TimeRangeStart	In	inherit	int (4 bytes)	The start time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.

Exceptions

csp_PersonalRuleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalRule object was not found. The names of the object (Personal rule), table (tbl_PersonalRule), and column (ObjectId) are included with the exception message.

Parameter Properties

@AlwaysTriggerPage

Property Name	Value
Description:	A flag indicating whether the rule should always trigger a pager notification device associated with this rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.AlwaysTriggerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.AlwaysTriggerPage." If "tbl_PersonalRule.AlwaysTriggerPage" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code (CMC) to transmit to Cisco Unified Communications Manager when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign accounting or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ClientMatterCode." If "tbl_PersonalRule.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestCallActionObjectId

Property Name	Value
Description:	The unique identifier of the CallAction object used to route the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestCallActionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestCallActionObjectId." If "tbl_PersonalRule.DestCallActionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestDtmfAccessIdObjectId

Property Name	Value
Description:	The destination (DtmfAccessId) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding DtmfAccessId object in tbl_DtmfAccessId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestDtmfAccessIdObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestDtmfAccessIdObjectId." If "tbl_PersonalRule.DestDtmfAccessIdObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestNotificationDeviceObjectId

Property Name	Value
Description:	The destination (NotificationDevice) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding NotificationDevice object in tbl_NotificationDevice.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestNotificationDeviceObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestNotificationDeviceObjectId." If "tbl_PersonalRule.DestNotificationDeviceObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPersonalDestinationGroupObjectId

Property Name	Value
Description:	The destination (PersonalDestinationGroup) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestinationGroup object in tbl_PersonalDestinationGroup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPersonalDestinationGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPersonalDestinationGroupObjectId." If "tbl_PersonalRule.DestPersonalDestinationGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPersonalDestinationObjectId

Property Name	Value
Description:	The destination (PersonalDestination) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PersonalDestination object in tbl_PersonalDestination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPersonalDestinationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPersonalDestinationObjectId." If "tbl_PersonalRule.DestPersonalDestinationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DestPhoneNumberObjectId

Property Name	Value
Description:	The destination (PhoneNumber) to which Cisco Unity Connection should route an incoming call to the subscriber. Specifically, the unique identifier of the corresponding PhoneNumber object in tbl_PhoneNumber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.DestPhoneNumberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.DestPhoneNumberObjectId." If "tbl_PersonalRule.DestPhoneNumberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InMeeting

Property Name	Value
Description:	A flag indicating whether the rule is triggered depending on whether the subscriber is in a meeting or not.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.InMeeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleMeetingCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.InMeeting." If "tbl_PersonalRule.InMeeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsInclusive

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should AND or OR the different types of rules defined in tbl_PersonalRuleCaller for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.IsInclusive
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleCallerInclusiveCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.IsInclusive." If "tbl_PersonalRule.IsInclusive" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsInternal

Property Name	Value
Description:	A flag indicating whether the rule should trigger based on whether the caller is internal or external.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.IsInternal
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleCallerInternalCondition
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.IsInternal." If "tbl_PersonalRule.IsInternal" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRule object.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ObjectId." If "tbl_PersonalRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RingAllDestinationsAtOnce

Property Name	Value
Description:	A flag indicating whether all rule destinations should be dialed simultaneously or sequentially.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.RingAllDestinationsAtOnce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.RingAllDestinationsAtOnce." If "tbl_PersonalRule.RingAllDestinationsAtOnce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RuleIndex

Property Name	Value
Description:	The order in which rules within a rule set are executed.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_PersonalRule.RuleIndex
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.RuleIndex." If "tbl_PersonalRule.RuleIndex" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScreenCall

Property Name	Value
Description:	A flag indicating whether the incoming call should be screened.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.ScreenCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.ScreenCall." If "tbl_PersonalRule.ScreenCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeEnd

Property Name	Value
Description:	The end time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeEnd
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeEnd." If "tbl_PersonalRule.TimeRangeEnd" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeIndicatesActiveHours

Property Name	Value
Description:	The definition for how a time range should be utilized.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeIndicatesActiveHours
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	PersonalRuleTimeRangeType
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeIndicatesActiveHours." If "tbl_PersonalRule.TimeRangeIndicatesActiveHours" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeRangeStart

Property Name	Value
Description:	The start time for the time range in which this rule is either enabled or disabled, depending on the value of TimeRangeIndicatedActiveHours.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRule.TimeRangeStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRule.TimeRangeStart." If "tbl_PersonalRule.TimeRangeStart" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.236. csp_PersonalRuleSetCreate

Creates a new PersonalRuleSet object for a subscriber by inserting a new row into tbl_PersonalRuleSet.

Additional Information

The parameters @Name and @SubscriberObjectId must be provided.

If @VoiceName is passed in, this procedure will also add a voice name (file name in tbl_StreamFile) by executing csp_StreamFileModify.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal rule set to be used when displaying entries in Cisco Personal Communications Assistant.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this rule set belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether this rule set is enabled.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object that indicates the operational hours for this rule set. (If the personal rule set is operational for a particular time period.)
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this personal rule set (if voice name has already been recorded).

Exceptions

csp_PersonalRuleSetCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether this rule set is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.IsEnabled." If "tbl_PersonalRuleSet.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal rule set to be used when displaying entries in Cisco Personal Communications Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.Name." If "tbl_PersonalRuleSet.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.ObjectId." If "tbl_PersonalRuleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object that indicates the operational hours for this rule set. (If the personal rule set is operational for a particular time period.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.ScheduleSetObjectId." If "tbl_PersonalRuleSet.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this rule set belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.SubscriberObjectId." If "tbl_PersonalRuleSet.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this personal rule set (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.237. csp_PersonalRuleSetDelete

Deletes a PersonalRuleSet object from tbl_PersonalRuleSet as specified by the @ObjectId parameter.

Additional Information

If this personal rule set owns any schedule sets or schedules, this procedure will delete the schedule set (executes csp_ScheduleSetDelete) and schedule(s) (executes csp_ScheduleDelete) belonging to this personal rule set.

If this personal rule set has a recorded voice name (i.e., file name in tbl_StreamFile), this procedure will delete the voice name by executing csp_StreamFileDelete.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalRuleSetDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalRuleSet object was not found. The names of the object (Personal rule set), table (tbl_PersonalRuleSet), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalRuleSet), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.ObjectId." If "tbl_PersonalRuleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.238. csp_PersonalRuleSetModify

Updates the attributes of a PersonalRuleSet object based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalRuleSet object that is updated.

Additional Information

A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file (executes csp_StreamFileDelete) and accept the new voice file (executes csp_StreamFileModify).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether this rule set is enabled.
Optional	@Name	In	inherit	nvarchar (64 characters)	The unique text name of the personal rule set to be used when displaying entries in Cisco Personal Communications Assistant.
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object that indicates the operational hours for this rule set. (If the personal rule set is operational for a particular time period.)
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this rule set.

Exceptions

csp_PersonalRuleSetModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalRuleSet object was not found. The names of the object (Personal rule set), table (tbl_PersonalRuleSet), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether this rule set is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.IsEnabled." If "tbl_PersonalRuleSet.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The unique text name of the personal rule set to be used when displaying entries in Cisco Personal Communications Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.Name." If "tbl_PersonalRuleSet.Name" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalRuleSet object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.ObjectId." If "tbl_PersonalRuleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object that indicates the operational hours for this rule set. (If the personal rule set is operational for a particular time period.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalRuleSet.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalRuleSet.ScheduleSetObjectId." If "tbl_PersonalRuleSet.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	New voice file to use for this rule set.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.239. csp_PersonalVoiceMailListCreate

Creates a new personal voicemail list for a user by inserting a new row into tbl_PersonalGroup. A "personal voicemail list" is a personal group that contains only Cisco Unity Connection subscribers ("IsVoiceMailList" == 1). It is used for addressing messages, either via the TUI or CPCA.

Additional Information

A personal voicemail list can contain subscribers, system distribution lists, or other personal voicemail lists.

The parameters @Alias, @DisplayName, @NumericId, and @UserObjectId must be provided.

An Alias object is created in the tbl_Alias table by calling csp_AliasCreate. The Alias is created by prepending only the first 28 characters of the user's alias (so as not to exceed the 64 character maximum of tbl_Alias.Alias) to the objectid of this personal group.

If the @VoiceName is provided, a stream file is also created.

This procedure executes csp_PersonalGroupCreate to create the PersonalGroup.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this group belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@NumericId	In	ignore	nvarchar (4 characters)	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this personal voice mail list (if voice name has already been recorded).

Exceptions

csp_PersonalVoiceMailListCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName, @Alias, @NumericId, and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NumericId

Property Name	Value
Description:	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Notes:	If @NumericID is not NULL, @NumericId is appended to the user's alias to generate the SMTPAddress for the personal group.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.NumericId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (4 characters)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Objectld

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.Objectld
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.Objectld." If "tbl_PersonalGroup.Objectld" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@UserObjectld

Property Name	Value
Description:	The unique identifier of the User object to which this group belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.UserObjectld
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.UserObjectld." If "tbl_PersonalGroup.UserObjectld" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this personal voice mail list (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.240. csp_PersonalVoiceMailListDelete

Deletes a PersonalGroup object from tbl_PersonalGroup as specified by the @ObjectId parameter.

Additional Information

Member mappings in tbl_PersonalGroupMember will automatically be deleted (SQL cascade delete). Also any member mappings where this group is the member of another group will automatically be deleted.

The Alias associated with this PersonalGroup will be deleted from tbl_Alias. Also if a stream file exists for this PersonalGroup, it will be deleted from tbl_StreamFile.

If the specified instance of a PersonalGroup object is successfully deleted, this stored procedure returns success (0).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalVoiceMailListDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are two conditions that can cause an Object Not Found exception to be thrown:</p> <ol style="list-style-type: none"> 1. The specified PersonalGroup object was not found. The names of the object (PersonalGroup), table (tbl_PersonalGroup), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalGroup), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.241. csp_PersonalVoiceMailListMemberCreate

Adds a member (subscriber, distribution list, or another personal voicemail list) to a personal voicemail list by inserting a new row into tbl_PersonalGroupMember.

Additional Information

The parameter @PersonalVoiceMailListObjectId must be provided. In addition, one of the following parameters must also be provided:

- @MemberSubscriberObjectId
- @MemberDistributionListObjectId
- @MemberPersonalGroupObjectId

One of the @Member* parameters must contain a valid member, while the remaining @Member* parameters contains a value of NULL.

This procedure executes csp_PersonalGroupMemberCreate to create the member.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PersonalVoiceMailListObjectId	In	inherit	char (36 characters)	The unique identifier of the PersonalGroup object to which this member belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MemberContactObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in tbl_Contact. Otherwise, this attribute is set to NULL.
Optional	@MemberDistributionListObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a distribution list, the unique identifier of the corresponding DistributionList object in tbl_DistributionList. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MemberPersonalVoiceMailListObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in tbl_PersonalGroup. Otherwise, this attribute is set ot NULL.
Optional	@MemberSubscriberObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set ot NULL.
Optional	@ObjectId	Out	inherit	char (36 characters)	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.

Exceptions

csp_PersonalVoiceMailListMemberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that cause this exception to be thrown: 1. The value of the required parameter @PersonalVoiceMailListObjectId is NULL. The name of the missing parameter is included with the exception message. 2. From csp_PersonalGroupMemberSetRebuild - The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MemberSubscriberObjectId was not found, and is therefore not a subscriber. The names of the object (Subscriber), table (tbl_UserSubscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MemberContactObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in tbl_Contact. Otherwise, this attribute is set ot NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberContactObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberContactObjectId." If "tbl_PersonalGroupMember.MemberContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberDistributionListObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a distribution list, the unique identifier of the corresponding DistributionList object in tbl_DistributionList. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberDistributionListObjectId." If "tbl_PersonalGroupMember.MemberDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberPersonalVoiceMailListObjectId

Property Name	Value
Description:	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in tbl_PersonalGroup. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberPersonalGroupId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberPersonalGroupId." If "tbl_PersonalGroupMember.MemberPersonalGroupId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberSubscriberObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set ot NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberUserObjectId." If "tbl_PersonalGroupMember.MemberUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.ObjectId." If "tbl_PersonalGroupMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalVoiceMailListObjectId

Property Name	Value
Description:	The unique identifier of the PersonalGroup object to which this member belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.PersonalGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.PersonalGroupObjectId." If "tbl_PersonalGroupMember.PersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.242. csp_PersonalVoiceMailListMemberDelete

Deletes a personal voicemail list member (PersonalGroupMember object) specified by the @ObjectId parameter from tbl_PersonalGroupMember.

Additional Information

This procedure executes csp_PersonalGroupMemberDelete to delete the member.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PersonalVoiceMailListMemberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that cause this exception to be thrown: 1. The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message. 2. From csp_PersonalGroupMemberSetRebuild - The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are two conditions that can cause an Object Not Found exception to be thrown:</p> <ol style="list-style-type: none"> 1. From csp_PersonalGroupMemberDelete - The specified PersonalGroupMember was not found. The names of the object (Personal group member), table (tbl_PersonalGroupMember), and column (ObjectId) are included with the exception message. 2. From csp_PersonalGroupMemberDelete - The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalGroupMember), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.ObjectId." If "tbl_PersonalGroupMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.243. csp_PersonalVoiceMailListModify

Updates the attributes of a personal voicemail list (PersonalGroup object) based on the values passed in via the parameters. The @ObjectId parameter identifies the PersonalGroup object that is updated.

Additional Information

This procedure executes csp_PersonalGroupModify to update the PersonalGroup attributes.

If the @VoiceName is provided, a check is made to determine if a stream file already exists for this PersonalGroup. If a stream file does exist, it is deleted, and then a new stream file is created. Otherwise a new stream file is created.

Note that this procedure does not update the Alias in tbl_Alias.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@NumericId	In	inherit	nvarchar (4 characters)	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this personal voice mail list.

Exceptions

csp_PersonalVoiceMailListModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalGroup object was not found. The names of the object (PersonalGroup), table (tbl_PersonalGroup), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NumericId

Property Name	Value
Description:	If being used as a personal voicemail list (i.e., "private" voicemail list), the numeric identifier for the personal group,
Notes:	
Business Rules:	@NumericId is appended to the user's alias to generate the alias for the personal group.
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.NumericId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (4 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.NumericId." If "tbl_PersonalGroup.NumericId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this personal voice mail list.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.244. csp_PhoneNumberCreate

Creates a new PhoneNumber object for a user such as "Home Phone" by inserting a new row into tbl_PhoneNumber.

Additional Information

The parameter @PhoneNumber must be provided. Either @Owner_ContactObjectId or @Owner_UserObjectId must be passed in to the procedure.

If @DialablePhoneNumber is not passed in to the procedure, it is set to the same value as @PhoneNumber.

This procedure will not create a PhoneNumber object if a duplicate phone number with Autologon set already exists. Also, a new PhoneNumber object cannot be created if the number already exists in tbl_DtmfAccessId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PhoneNumber	In	inherit	varchar (255 characters)	A phone number.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@AutoLogon	In	inherit	smallint (2 bytes)	A flag indicating whether the phone number can be used for automatically logging on the caller.
Optional	@CallPickupTimeout	In	inherit	smallint (2 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Optional	@DialablePhoneNumber	In	ignore	varchar (255 characters)	A dialable version of the PhoneNumber column.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the phone number to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.
Optional	@Owner_ContactObjectId	In	inherit	char (36 characters)	The object to which this phone number belongs. If the phone number belongs to a Contact, the unique identifier of the Contact object to which this phone number belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_UserObjectId	In	inherit	char (36 characters)	The object to which this phone number belongs. If the phone number belongs to a User, the unique identifier of the User object to which this phone number belongs. Otherwise, this attribute is set to NULL.
Optional	@PhoneType	In	inherit	smallint (2 bytes)	A well-defined name for the phone number, such as "Home," "Business," "Mobile," etc.
Optional	@SearchablePhoneNumber	In	inherit	varchar (255 characters)	Phone number without formatting or any dial codes. A basic form suitable for searching on.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.

Exceptions

csp_PhoneNumberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @PhoneNumber is NULL. The name of the missing parameter is included with the exception message.
1024	EXCEPTION_AUTOLOGON_PHONENUMBER_DUPLICATE	A duplicate phone number with AutoLogon set to true (1) already exists.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AutoLogon

Property Name	Value
Description:	A flag indicating whether the phone number can be used for automatically logging on the caller.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.AutoLogon
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.AutoLogon." If "tbl_PhoneNumber.AutoLogon" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.CallPickupTimeout." If "tbl_PhoneNumber.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.ClientMatterCode." If "tbl_PhoneNumber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DialablePhoneNumber

Property Name	Value
Description:	A dialable version of the PhoneNumber column.
Notes:	If @DialablePhoneNumber is not passed in to the procedure, it is set to the same value as @PhoneNumber.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.DialablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DialablePhoneNumber
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the phone number to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.DisplayName." If "tbl_PhoneNumber.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.ObjectId." If "tbl_PhoneNumber.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Owner_ContactObjectId

Property Name	Value
Description:	The object to which this phone number belongs. If the phone number belongs to a Contact, the unique identifier of the Contact object to which this phone number belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	Either @Owner_ContactObjectId or @Owner_UserObjectId must be passed in to the procedure.
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_PhoneNumber.Owner_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.Owner_ContactObjectId." If "tbl_PhoneNumber.Owner_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Owner_UserObjectId

Property Name	Value
Description:	The object to which this phone number belongs. If the phone number belongs to a User, the unique identifier of the User object to which this phone number belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	Either @Owner_ContactObjectId or @Owner_UserObjectId must be passed in to the procedure.
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.Owner_UserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.Owner_UserObjectId." If "tbl_PhoneNumber.Owner_UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	A phone number.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_PhoneNumber.PhoneNumber
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.PhoneNumber." If "tbl_PhoneNumber.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumberType

Property Name	Value
Description:	A well-defined name for the phone number, such as "Home," "Business," "Mobile," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.PhoneType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PhoneType
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.PhoneType." If "tbl_PhoneNumber.PhoneType" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@SearchablePhoneNumber

Property Name	Value
Description:	Phone number without formatting or any dial codes. A basic form suitable for searching on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.SearchablePhoneNumber
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.SearchablePhoneNumber." If "tbl_PhoneNumber.SearchablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.TransmitForcedAuthorizationCode." If "tbl_PhoneNumber.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.245. csp_PhoneNumberDelete

Deletes a PhoneNumber object from tbl_PhoneNumber as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PhoneNumberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PhoneNumber object was not found. The names of the object (Phone number), table (tbl_PhoneNumber), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PhoneNumber), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.ObjectId." If "tbl_PhoneNumber.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.246. csp_PhoneNumberModify

Updates the attributes of a PhoneNumber object based on the values passed in via the parameters. The @ObjectId parameter identifies the PhoneNumber object that is updated.

Additional Information

If @DialablePhoneNumber is not passed in to the procedure, it is set to the same value as @PhoneNumber.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@AutoLogon	In	inherit	smallint (2 bytes)	A flag indicating whether the phone number can be used for automatically logging on the caller.
Optional	@CallPickupTimeout	In	inherit	smallint (2 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Optional	@DialablePhoneNumber	In	inherit	varchar (255 characters)	A dialable version of the PhoneNumber column.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the phone number to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@PhoneNumber	In	inherit	varchar (255 characters)	A phone number.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@PhoneType	In	inherit	smallint (2 bytes)	A well-defined name for the phone number, such as "Home," "Business," "Mobile," etc.
Optional	@SearchablePhoneNumber	In	inherit	varchar (255 characters)	Phone number without formatting or any dial codes. A basic form suitable for searching on.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.

Exceptions

csp_PhoneNumberModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PhoneNumber object was not found. The names of the object (Phone number), table (tbl_PhoneNumber), and column (ObjectId) are included with the exception message.
1024	EXCEPTION_AUTOLOGON_PHONENUMBER_DUPLICATE	A duplicate phone number with AutoLogon set to true (1) already exists.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AutoLogon

Property Name	Value
Description:	A flag indicating whether the phone number can be used for automatically logging on the caller.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.AutoLogon
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.AutoLogon." If "tbl_PhoneNumber.AutoLogon" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.CallPickupTimeout." If "tbl_PhoneNumber.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.ClientMatterCode." If "tbl_PhoneNumber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@DialablePhoneNumber

Property Name	Value
Description:	A dialable version of the PhoneNumber column.
Notes:	If @DialablePhoneNumber is not passed in to the procedure, it is set to the same value as @PhoneNumber.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.DialablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DialablePhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.DialablePhoneNumber." If "tbl_PhoneNumber.DialablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the phone number to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.DisplayName." If "tbl_PhoneNumber.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PhoneNumber object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.ObjectId." If "tbl_PhoneNumber.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PhoneNumber

Property Name	Value
Description:	A phone number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.PhoneNumber." If "tbl_PhoneNumber.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneType

Property Name	Value
Description:	A well-defined name for the phone number, such as "Home," "Business," "Mobile," etc.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.PhoneType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PhoneType
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.PhoneType." If "tbl_PhoneNumber.PhoneType" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@SearchablePhoneNumber

Property Name	Value
Description:	Phone number without formatting or any dial codes. A basic form suitable for searching on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.SearchablePhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.SearchablePhoneNumber." If "tbl_PhoneNumber.SearchablePhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PhoneNumber.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_PhoneNumber.TransmitForcedAuthorizationCode." If "tbl_PhoneNumber.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.247. csp_PolicyCreate

Creates a new policy to give a user authorization to access a resource on a target by inserting a new row into tbl_Policy. This procedure assigns a role to a user, and then associates the policy to a target (distribution list, handler, user or VMS).

Additional Information

The parameters @RoleObjectId and @UserObjectId must be provided.

If @VmsObjectId is not provided or is NULL, it will be set objectid of the primary LocationVMS.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@RoleObjectId	In	inherit	char (36 characters)	The unique identifier of the Role object that specifies the privileges to be granted to the subject, for the target. For example, the role could be a "Technician."
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object (subject) to which this policy is assigned.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DateExpires	In	inherit	datetime (8 bytes)	The date and time the policy automatically expires. Used to limit the period of time that a policy is active.
Optional	@ObjectId	Out	inherit	char (36 characters)	Returns the unique identifier (ObjectId) of the newly created policy.
Optional	@TargetAgencyObjectId	In	inherit	char (36 characters)	The unique identifier of the Agency object to which this policy applies.
Optional	@TargetDistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object to which this policy applies.
Optional	@TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the Handler object to which this policy applies.
Optional	@TargetUserObjectId	In	inherit	char (36 characters)	The unique identifier of the user object to which this policy applies.
Optional	@TargetVmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@VmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.

Exceptions

csp_PolicyCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@RoleObjectId and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Role object was not found in vw_Role. The names of the object (Role), view (vw_Role), and column (ObjectId) are included with the exception message.
1051	EXCEPTION_ROLE_DISABLED	The Role specified by @RoleObjectId is disabled. The Role cannot be assigned to this policy.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DateExpires

Property Name	Value
Description:	The date and time the policy automatically expires. Used to limit the period of time that a policy is active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.DateExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.DateExpires." If "tbl_Policy.DateExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Returns the unique identifier (ObjectId) of the newly created policy.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.ObjectId." If "tbl_Policy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@RoleObjectId

Property Name	Value
Description:	The unique identifier of the Role object that specifies the privileges to be granted to the subject, for the target. For example, the role could be a "Technician."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.RoleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.RoleObjectId." If "tbl_Policy.RoleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TargetAgencyObjectId

Property Name	Value
Description:	The unique identifier of the Agency object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetAgencyObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetAgencyObjectID." If "tbl_Policy.TargetAgencyObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetDistributionListObjectID

Property Name	Value
Description:	The unique identifier of the DistributionList object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetDistributionListObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetDistributionListObjectID." If "tbl_Policy.TargetDistributionListObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetHandlerObjectID

Property Name	Value
Description:	The unique identifier of the Handler object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetHandlerObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetHandlerObjectId." If "tbl_Policy.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetUserId

Property Name	Value
Description:	The unique identifier of the user object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetUserId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetUserId." If "tbl_Policy.TargetUserId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetVmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object (subject) to which this policy is assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.UserId." If "tbl_Policy.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	Defaults to the primary location.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

6.248. csp_PolicyDelete

Deletes a Policy object from tbl_Policy as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Policy object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_PolicyDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Policy object was not found. The names of the object (Policy), table (tbl_Policy), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Policy), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.
1313	EXCEPTION_POLICY_IS_ONLY_SYSADMIN	The policy cannot be deleted because there are no other System Administrator policies.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Policy object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.ObjectId." If "tbl_Policy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.249. csp_PolicyModify

Updates the attributes of a Policy object based on the values passed in via the parameters. The @ObjectId parameter identifies the Policy object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Policy object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DateExpires	In	inherit	datetime (8 bytes)	The date and time the policy automatically expires. Used to limit the period of time that a policy is active.
Optional	@RoleObjectId	In	inherit	char (36 characters)	The unique identifier of the Role object that specifies the privileges to be granted to the subject, for the target. For example, the role could be a "Technician."
Optional	@TargetAgencyObjectId	In	inherit	char (36 characters)	The unique identifier of the Agency object to which this policy applies.
Optional	@TargetDistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object to which this policy applies.
Optional	@TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the Handler object to which this policy applies.
Optional	@TargetUserObjectId	In	inherit	char (36 characters)	The unique identifier of the user object to which this policy applies.
Optional	@TargetVmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.
Optional	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object (subject) to which this policy is assigned.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@VmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.

Exceptions

csp_PolicyModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause this procedure to throw an Object Not Found exception: 1. The specified Policy object was not found. The names of the object (Policy), table (tbl_Policy), and column (ObjectId) are included with the exception message. 2. The specified Role object was not found in vw_Role. The names of the object (Role), view (vw_Role), and column (ObjectId) are included with the exception message. This condition occurs when the Role is disabled (tbl_Role.IsEnabled = 0).
1051	EXCEPTION_ROLE_DISABLED	The Role specified by @RoleObjectId is disabled. The Role cannot be assigned to this policy.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DateExpires

Property Name	Value
Description:	The date and time the policy automatically expires. Used to limit the period of time that a policy is active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.DateExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.DateExpires." If "tbl_Policy.DateExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Policy object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.ObjectId." If "tbl_Policy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@RoleObjectId

Property Name	Value
Description:	The unique identifier of the Role object that specifies the privileges to be granted to the subject, for the target. For example, the role could be a "Technician."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.RoleObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.RoleObjectId." If "tbl_Policy.RoleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TargetAgencyObjectId

Property Name	Value
Description:	The unique identifier of the Agency object to which this policy applies.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetAgencyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetAgencyObjectId." If "tbl_Policy.TargetAgencyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetDistributionListObjectId

Property Name	Value
Description:	The unique identifier of the DistributionList object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetDistributionListObjectId." If "tbl_Policy.TargetDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the Handler object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Policy.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetHandlerObjectId." If "tbl_Policy.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetUserObjectId

Property Name	Value
Description:	The unique identifier of the user object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetUserObjectId." If "tbl_Policy.TargetUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetVmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object (subject) to which this policy is assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.UserId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.UserId." If "tbl_Policy.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

6.250. csp_RestrictionPatternCreate

Creates a new RestrictionPattern object by inserting a new row into tbl_RestrictionPattern. A RestrictionPattern contains dial strings consisting of a call pattern and a setting that specifies whether numbers matching the call pattern are permitted for use.

Additional Information

The parameters @NumberPattern and @RestrictionTableObjectId must be provided.

When adding a new RestrictionPattern, the new RestrictionPattern is assigned a SequenceNumber of zero -- placed at the top of the stack. The sequence numbers for all existing RestrictionPatterns for the specified RestrictionTableobject are automatically renumbered.

Business Rules

If the SequenceNumber is not passed-in or is set to NULL, the pattern is added to the top of the list.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NumberPattern	In	inherit	nvarchar (40 characters)	The specific numbers or patterns of numbers (including external and long-distance access codes) that can be permitted or restricted.
Required	@RestrictionTableObjectId	In	inherit	char (36 characters)	The unique identifier of the RestrictionTable object to which this restriction pattern belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Blocked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection permits the use of dial strings matching the pattern.
Optional	@ObjectId	Out	inherit	char (36 characters)	Surrogate key for the table.
Optional	@SequenceNumber	In	inherit	smallint (2 bytes)	A sequential index for this RestrictionPattern within the parent RestrictionTable, which specifies the order in which Cisco Unity Connection will apply each call pattern.

Exceptions

csp_RestrictionPatternCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@NumberPattern and @RestrictionTableObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Blocked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection permits the use of dial strings matching the pattern.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.Blocked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.Blocked." If "tbl_RestrictionPattern.Blocked" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NumberPattern

Property Name	Value
Description:	The specific numbers or patterns of numbers (including external and long-distance access codes) that can be permitted or restricted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.NumberPattern
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.NumberPattern." If "tbl_RestrictionPattern.NumberPattern" can be NULL, then explicit NULL is allowed.
Default Value:	'*'
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key for the table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.ObjectId." If "tbl_RestrictionPattern.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RestrictionTableObjectId

Property Name	Value
Description:	The unique identifier of the RestrictionTable object to which this restriction pattern belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.RestrictionTableObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.RestrictionTableObjectId." If "tbl_RestrictionPattern.RestrictionTableObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SequenceNumber

Property Name	Value
Description:	A sequential index for this RestrictionPattern within the parent RestrictionTable, which specifies the order in which Cisco Unity Connection will apply each call pattern.
Notes:	If NULL, it will be auto-assigned by the sproc to 0 (first).
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.SequenceNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.SequenceNumber." If "tbl_RestrictionPattern.SequenceNumber" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.251. csp_RestrictionPatternDelete

Deletes a RestrictionPattern object from tbl_RestrictionPattern as specified by the @ObjectId parameter.

Additional Information

When deleting an existing RestrictionPattern object, the SequenceNumber for all remaining RestrictionPattern objects belonging to the same RestrictionTable are automatically renumbered.

ObjectId OR (RestrictionTableObjectId,SequenceNumber) were at one time allowed, but ObjectId is now required (makes life better for SA code generator)

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Surrogate key for the table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RestrictionPatternDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@SequenceNumber and @RestrictionTableObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified RestrictionPattern object was not found. The names of the object (Restriction pattern), table (tbl_RestrictionPattern), and columns (SequenceNumber and RestrictionTableObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_RestrictionPattern), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key for the table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.ObjectId." If "tbl_RestrictionPattern.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.252. csp_RestrictionPatternModify

Updates the attributes of a RestrictionPattern object based on the values passed in via the parameters. The @ObjectId parameter identifies the RestrictionPattern object that is updated.

Additional Information

Note that the @RestrictionTableObjectId parameters cannot be updated.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Surrogate key for the table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Blocked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection permits the use of dial strings matching the pattern.
Optional	@NumberPattern	In	inherit	nvarchar (40 characters)	The specific numbers or patterns of numbers (including external and long-distance access codes) that can be permitted or restricted.
Optional	@RestrictionTableObjectId	In	inherit	char (36 characters)	*** Obsolete, do not use.
Optional	@SequenceNumber	In	inherit	smallint (2 bytes)	A sequential index for this RestrictionPattern within the parent RestrictionTable, which specifies the order in which Cisco Unity Connection will apply each call pattern.

Exceptions

csp_RestrictionPatternModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@SequenceNumber and @RestrictionTableObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	he specified RestrictionPattern object was not found. The names of the object (Restriction pattern), table (tbl_RestrictionPattern), and columns (SequenceNumber and RestrictionTableObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Blocked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection permits the use of dial strings matching the pattern.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.Blocked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.Blocked." If "tbl_RestrictionPattern.Blocked" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NumberPattern

Property Name	Value
Description:	The specific numbers or patterns of numbers (including external and long-distance access codes) that can be permitted or restricted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.NumberPattern
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.NumberPattern." If "tbl_RestrictionPattern.NumberPattern" can be NULL, then explicit NULL is allowed.
Default Value:	'*'
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key for the table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.ObjectId." If "tbl_RestrictionPattern.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@RestrictionTableObjectId

Property Name	Value
Description:	*** Obsolete, do not use.
Notes:	
Business Rules:	
Developer Notes:	This cannot be changed - parameter should be removed at some point, it is not needed since we now require ObjectId as key.
Reference Table/Column:	tbl_RestrictionPattern.RestrictionTableObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.RestrictionTableObjectId." If "tbl_RestrictionPattern.RestrictionTableObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@SequenceNumber

Property Name	Value
Description:	A sequential index for this RestrictionPattern within the parent RestrictionTable, which specifies the order in which Cisco Unity Connection will apply each call pattern.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionPattern.SequenceNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionPattern.SequenceNumber." If "tbl_RestrictionPattern.SequenceNumber" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

6.253. csp_RestrictionPatternSequenceNumberSwap

Swaps the SequenceNumbers of two restriction patterns.

Additional Information

Clients use this to move restrictions up and down in the restriction table list.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId1	In	ignore	char (36 characters)	The ObjectId of the first pattern.
Required	@ObjectId2	In	ignore	char (36 characters)	The ObjectId of the second pattern.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RestrictionPatternSequenceNumberSwap will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ObjectId1 and @ObjectId2) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The RestrictionPattern object specified by @ObjectId1 was not found. The names of the object (Restriction pattern), table (tbl_RestrictionPattern), and parameter (ObjectId1) are included with the exception message. 2. The RestrictionPattern object specified by @ObjectId2 was not found. The names of the object (Restriction pattern), table (tbl_RestrictionPattern), and parameter (ObjectId2) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId1

Property Name	Value
Description:	The ObjectId of the first pattern.
Notes:	An ObjectId is generated using newid().

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectID2

Property Name	Value
Description:	The ObjectID of the second pattern.
Notes:	An ObjectID is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.254. csp_RestrictionTableCreate

Creates a new RestrictionTable object by inserting a new row into tbl_RestrictionTable. A RestrictionTable object is used to control which phone numbers subscribers can use for transferring calls, recording and playback by phone from Cisco Unity Connection applications, delivering faxes to a fax machine, and sending message notifications.

Additional Information

The parameter @DisplayName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this restriction table to be used when displaying entries in the administrative console. For example, "{Default Transfer}."
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DefaultBlocked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection permits the phone number in the case where a phone number does not match any call patterns in this restriction table.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this restriction table belongs.
Optional	@MaxDigits	In	inherit	smallint (2 bytes)	The maximum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Optional	@MinDigits	In	inherit	smallint (2 bytes)	The minimum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Undeatable	In	inherit	smallint (2 bytes)	A flag indicating whether this restriction table can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_RestrictionTableCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultBlocked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection permits the phone number in the case where a phone number does not match any call patterns in this restriction table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.DefaultBlocked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.DefaultBlocked." If "tbl_RestrictionTable.DefaultBlocked" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this restriction table to be used when displaying entries in the administrative console. For example, "{Default Transfer}."
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.DisplayName." If "tbl_RestrictionTable.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this restriction table belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.LocationObjectId." If "tbl_RestrictionTable.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxDigits

Property Name	Value
Description:	The maximum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_RestrictionTable.MaxDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.MaxDigits." If "tbl_RestrictionTable.MaxDigits" can be NULL, then explicit NULL is allowed.
Default Value:	40
Direction:	In
Update Column Value From Parameter:	True

@MinDigits

Property Name	Value
Description:	The minimum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.MinDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.MinDigits." If "tbl_RestrictionTable.MinDigits" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.ObjectId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.ObjectId." If "tbl_RestrictionTable.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this restriction table can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.Undeletable." If "tbl_RestrictionTable.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.255. csp_RestrictionTableDelete

Deletes a RestrictionTable object from tbl_RestrictionTable as specified by the @ObjectId parameter.

Additional Information

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the restriction table.

An FK Cascade Delete constraint ensures that all tbl_RestrictionPattern rows belonging to this RestrictionTable object will be deleted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RestrictionTableDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified RestrictionTable object was not found. The names of the object (Restriction table), table (tbl_RestrictionTable), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_RestrictionTable), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Error #	Name	Description
1016	EXCEPTION_OBJECT_UNDELETABLE	The RestrictionTable specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Restriction table) and table (tbl_RestrictionTable), are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.ObjectId." If "tbl_RestrictionTable.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.256. csp_RestrictionTableEvaluate

Evaluates a phone number against a specified restriction table (and restriction patterns) to determine if it should be blocked (restricted) or not.

Additional Information

The parameters @ObjectId and @PhoneNumber must be provided.

The parameter @Blocked returns a value of 1 if the number is restricted, or 0 if the number is unrestricted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Required	@PhoneNumber	In	ignore	varchar (255 characters)	Phone number to check against the specified restriction table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Blocked	Out	ignore	smallint (2 bytes)	Indicates whether the phone number is restricted and should be blocked. Returns a value of 1 if the number is restricted, or 0 if unrestricted.

Exceptions

csp_RestrictionTableEvaluate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ObjectId and @PhoneNumber) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified RestrictionTable object was not found. The names of the object (Restriction table), table (tbl_RestrictionTable), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Blocked

Property Name	Value
Description:	Indicates whether the phone number is restricted and should be blocked. Returns a value of 1 if the number is restricted, or 0 if unrestricted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.ObjectId." If "tbl_RestrictionTable.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PhoneNumber

Property Name	Value
Description:	Phone number to check against the specified restriction table.
Notes:	Length of 255 is required to support SIP format phone numbers.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.257. csp_RestrictionTableModify

Updates the attributes of a RestrictionTable object based on the values passed in via the parameters. The @ObjectId parameter identifies the RestrictionTable object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DefaultBlocked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection permits the phone number in the case where a phone number does not match any call patterns in this restriction table.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this restriction table to be used when displaying entries in the administrative console. For example, "{Default Transfer}."
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this restriction table belongs.
Optional	@MaxDigits	In	inherit	smallint (2 bytes)	The maximum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Optional	@MinDigits	In	inherit	smallint (2 bytes)	The minimum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this restriction table can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_RestrictionTableModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified RestrictionTable object was not found. The names of the object (Restriction table), table (tbl_RestrictionTable), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultBlocked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection permits the phone number in the case where a phone number does not match any call patterns in this restriction table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.DefaultBlocked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.DefaultBlocked." If "tbl_RestrictionTable.DefaultBlocked" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this restriction table to be used when displaying entries in the administrative console. For example, "{Default Transfer}."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.DisplayName
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.DisplayName." If "tbl_RestrictionTable.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this restriction table belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.LocationObjectId." If "tbl_RestrictionTable.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxDigits

Property Name	Value
Description:	The maximum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.MaxDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.MaxDigits." If "tbl_RestrictionTable.MaxDigits" can be NULL, then explicit NULL is allowed.
Default Value:	40
Direction:	In
Update Column Value From Parameter:	True

@MinDigits

Property Name	Value
Description:	The minimum number of digits in a dial string (including access codes) allowed by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.MinDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.MinDigits." If "tbl_RestrictionTable.MinDigits" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RestrictionTable object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.ObjectId." If "tbl_RestrictionTable.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Undeletable

Property Name	Value
Description:	A flag indicating whether this restriction table can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RestrictionTable.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RestrictionTable.Undeletable." If "tbl_RestrictionTable.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.258. csp_RoleCreate

Creates a new Role object by inserting a new row into tbl_Role. A Role consists of a range of authorized operations for users that control access to the system.

Additional Information

The parameter @RoleName must be provided.

Cisco Unity Connection comes with a collection of predefined roles, which can be assigned to a user for a given resource. In the future, administrators will have the ability to create custom roles.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@RoleName	In	inherit	nvarchar (64 characters)	The given, unique text name of the user role. For example, "User Administrator," "Help Desk Administrator," "Technician," etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the role is enabled and is available in the SA.
Optional	@ObjectId	Out	inherit	char (36 characters)	Returns the unique identifier (ObjectId) of the newly created role.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	Is role read-only?
Optional	@RoleDescription	In	inherit	lvarchar (256 characters)	A description of the purpose of this role and its assigned capabilities.

Exceptions

csp_RoleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @RoleName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the role is enabled and is available in the SA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Role.IsEnabled." If "tbl_Role.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Returns the unique identifier (ObjectId) of the newly created role.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Role.ObjectId." If "tbl_Role.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ReadOnly

Property Name	Value
Description:	Is role read-only?
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Role.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Role.ReadOnly." If "tbl_Role.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RoleDescription

Property Name	Value
Description:	A description of the purpose of this role and its assigned capabilities.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.RoleDescription
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Role.RoleDescription." If "tbl_Role.RoleDescription" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RoleName

Property Name	Value
Description:	The given, unique text name of the user role. For example, "User Administrator," "Help Desk Administrator," "Technician," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.RoleName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Role.RoleName." If "tbl_Role.RoleName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.259. csp_RoleDelete

Deletes a Role object from tbl_Role as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Find a role by Object ID.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RoleDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The Role object specified by @ObjectId was not found. The names of the object (Role), table (tbl_Role), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Role), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Find a role by Object ID.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Role.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Role.ObjectId." If "tbl_Role.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.260. csp_RoleEnableCVM

Enables user administration roles needed for managing Community Voice Mail (CVM) application.

Additional Information

This procedure is called by the utility that enables a standard Cisco Unity Connection system for Community Voice Mail. It is only used to enable CVM roles (CVM Administrator and CVM Case Worker).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RoleEnableCVM will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	A Role with a rolename beginning with 'CVM' and not enabled (IsEnable = 0) was not found. The names of the object (role), table (tbl_Role), and columns (IsEnabled, RoleName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.261. csp_RoleModify

Updates the attributes of a Role object based on the values passed in via the parameters. The @ObjectId parameter identifies the Role object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Find role by Object ID.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the role is enabled and is available in the SA.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	Is role read-only?
Optional	@RoleDescription	In	inherit	lvarchar (256 characters)	A description of the purpose of this role and its assigned capabilities.
Optional	@RoleName	In	inherit	nvarchar (64 characters)	The given, unique text name of the user role. For example, "User Administrator," "Help Desk Administrator," "Technician," etc.

Exceptions

csp_RoleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The Role object specified by @ObjectId was not found. The names of the object (Role), table (tbl_Role), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the role is enabled and is available in the SA.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Role.IsEnabled." If "tbl_Role.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Find role by Object ID.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Role.ObjectId." If "tbl_Role.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReadOnly

Property Name	Value
Description:	Is role read-only?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.ReadOnly
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Role.ReadOnly." If "tbl_Role.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RoleDescription

Property Name	Value
Description:	A description of the purpose of this role and its assigned capabilities.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.RoleDescription
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Role.RoleDescription." If "tbl_Role.RoleDescription" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RoleName

Property Name	Value
Description:	The given, unique text name of the user role. For example, "User Administrator," "Help Desk Administrator," "Technician," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Role.RoleName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Role.RoleName." If "tbl_Role.RoleName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.262. csp_RoutingRuleConditionCreate

Create a row in tbl_RoutingRuleCondition

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@OperandValue	In	inherit	varchar (64 characters)	Value of operand in condition
Required	@Operator	In	inherit	int (4 bytes)	Type of operator in this condition - equals, greater than, etc.
Required	@Parameter	In	inherit	int (4 bytes)	Type of parameter in this condition - port, calling number, etc.
Required	@RoutingRuleObjectId	In	inherit	char (36 characters)	Object Id of the routing rule this condition belongs to
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ObjectId	Out	inherit	char (36 characters)	Unique identifier for this condition

Exceptions

csp_RoutingRuleConditionCreate does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	Unique identifier for this condition
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.ObjectId." If "tbl_RoutingRuleCondition.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	Out
Update Column Value From Parameter:	True

@OperandValue

Property Name	Value
Description:	Value of operand in condition
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.OperandValue
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.OperandValue." If "tbl_RoutingRuleCondition.OperandValue" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Operator

Property Name	Value
Description:	Type of operator in this condition - equals, greater than, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.Operator
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RoutingRuleOperator
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.Operator." If "tbl_RoutingRuleCondition.Operator" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parameter

Property Name	Value
Description:	Type of parameter in this condition - port, calling number, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.Parameter
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RoutingRuleParameter
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.Parameter." If "tbl_RoutingRuleCondition.Parameter" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RoutingRuleObjectId

Property Name	Value
Description:	Object Id of the routing rule this condition belongs to
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.RoutingRuleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.RoutingRuleObjectId." If "tbl_RoutingRuleCondition.RoutingRuleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.263. csp_RoutingRuleConditionDelete

Delete a row in tbl_RoutingRuleCondition

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Unique identifier for this condition
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_RoutingRuleConditionDelete does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Unique identifier for this condition
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.ObjectId." If "tbl_RoutingRuleCondition.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.264. csp_RoutingRuleConditionModify

Modify a row in tbl_RoutingRuleCondition

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Unique identifier for this condition
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@OperandValue	In	inherit	varchar (64 characters)	Value of operand in condition
Optional	@Operator	In	inherit	int (4 bytes)	Type of operator in this condition - equals, greater than, etc.
Optional	@Parameter	In	inherit	int (4 bytes)	Type of parameter in this condition - port, calling number, etc.

Exceptions

csp_RoutingRuleConditionModify does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Unique identifier for this condition
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.ObjectId." If "tbl_RoutingRuleCondition.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@OperandValue

Property Name	Value
Description:	Value of operand in condition
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.OperandValue
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.OperandValue." If "tbl_RoutingRuleCondition.OperandValue" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Operator

Property Name	Value
Description:	Type of operator in this condition - equals, greater than, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.Operator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RoutingRuleOperator
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.Operator." If "tbl_RoutingRuleCondition.Operator" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parameter

Property Name	Value
Description:	Type of parameter in this condition - port, calling number, etc.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRuleCondition.Parameter
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RoutingRuleParameter
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRuleCondition.Parameter." If "tbl_RoutingRuleCondition.Parameter" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.265. csp_RoutingRuleCreate

Creates a new RoutingRule by inserting a row into tbl_RoutingRule. The new rule is added to the top of the list.

Additional Information

The parameters @Condition and @DisplayName must be provided.

IF @Route_Action is not passed in, the default call action will be to Goto the default system directory handler and the conversation is set to the AD conversation.

Business Rules

The new rule is added to the top of the list with an RuleIndex of 0.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the routing rule to be used when displaying entries in the administrative console. For example, the display name for the default routing rule for attempting subscriber sign-in is "Attempt Sign-In."
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallType	In	inherit	smallint (2 bytes)	The type of call.
Optional	@Flags	In	inherit	smallint (2 bytes)	A flag indicating whether the rule can be edited or deleted.
Optional	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language Cisco Unity Connection will associate with the call.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Optional	@Route_Action	In	explicit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Route_TargetConversation	In	explicit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Route_TargetHandlerObjectId	In	explicit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@State	In	inherit	smallint (2 bytes)	The state of the rule (active, inactive, or invalid).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Type	In	inherit	smallint (2 bytes)	The type of rule based on call type (direct, forwarded, or system).
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the routing rule inherit language from location.

Exceptions

csp_RoutingRuleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Condition, @DisplayName and @Route_Action) is NULL. The name of the missing parameter is included with the exception message.
1036	EXCEPTION_INVALID_ROUTING_RULE_CONDITION	The specified condition is not valid for a routing rule.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallType

Property Name	Value
Description:	The type of call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.CallType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleCallType
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.CallType." If "tbl_RoutingRule.CallType" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the routing rule to be used when displaying entries in the administrative console. For example, the display name for the default routing rule for attempting subscriber sign-in is "Attempt Sign-In."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.DisplayName." If "tbl_RoutingRule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Flags

Property Name	Value
Description:	A flag indicating whether the rule can be edited or deleted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.Flags
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleFlags
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.Flags." If "tbl_RoutingRule.Flags" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language Cisco Unity Connection will associate with the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.LanguageCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.LanguageCode." If "tbl_RoutingRule.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.ObjectId." If "tbl_RoutingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Route_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Route_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Route_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The state of the rule (active, inactive, or invalid).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleState
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.State." If "tbl_RoutingRule.State" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Type

Property Name	Value
Description:	The type of rule based on call type (direct, forwarded, or system).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.Type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleType
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.Type." If "tbl_RoutingRule.Type" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.UseCallLanguage." If "tbl_RoutingRule.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the routing rule inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.266. csp_RoutingRuleDelete

Deletes a RoutingRule object from tbl_RoutingRule as specified by the @ObjectId parameter. All rules below the one deleted are moved up in the list by one.

Additional Information

This procedure also deletes the associated call action from tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallType	In	inherit	smallint (2 bytes)	The type of call.

Exceptions

csp_RoutingRuleDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The RoutingRule object specified by @ObjectId was not found. The names of the object (Routing rule), table (tbl_RoutingRule), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_RoutingRule), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallType

Property Name	Value
Description:	The type of call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.CallType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleCallType
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.CallType." If "tbl_RoutingRule.CallType" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.ObjectId." If "tbl_RoutingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.267. csp_RoutingRuleIndexSwap

Swaps the indexes of two routing rules.

Additional Information

Clients use this to move routing rules up and down the routing rules list.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId1	In	ignore	char (36 characters)	The objectid of the first rule.
Required	@ObjectId2	In	ignore	char (36 characters)	The ObjectId of the second rule.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_RoutingRuleIndexSwap will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ObjectId1 and @ObjectId2) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The RoutingRule object specified by @ObjectId1 was not found. The names of the object (Routing rule), table (tbl_RoutingRule), and parameter (ObjectId1) are included with the exception message. 2. The RoutingRule object specified by @ObjectId2 was not found. The names of the object (Routing rule), table (tbl_RoutingRule), and parameter (ObjectId2) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId1

Property Name	Value
Description:	The objectid of the first rule.
Notes:	An ObjectId is generated using newid().

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectID2

Property Name	Value
Description:	The ObjectID of the second rule.
Notes:	An ObjectID is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.268. csp_RoutingRuleModify

Updates the attributes of a RoutingRule object based on the values passed in via the parameters. The @ObjectId parameter identifies the RoutingRule object that is updated.

Additional Information

This procedure also updates the associated call action object in tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallType	In	inherit	smallint (2 bytes)	The type of call.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the routing rule to be used when displaying entries in the administrative console. For example, the display name for the default routing rule for attempting subscriber sign-in is "Attempt Sign-In."
Optional	@Flags	In	inherit	smallint (2 bytes)	A flag indicating whether the rule can be edited or deleted.
Optional	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language Cisco Unity Connection will associate with the call.
Optional	@Route_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Route_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Route_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@State	In	inherit	smallint (2 bytes)	The state of the rule (active, inactive, or invalid).
Optional	@Type	In	inherit	smallint (2 bytes)	The type of rule based on call type (direct, forwarded, or system).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the routing rule inherit language from location.

Exceptions

csp_RoutingRuleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The routing rule was not found.
1036	EXCEPTION_INVALID_ROUTING_RULE_CONDITION	The specified condition is not valid for a routing rule.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallType

Property Name	Value
Description:	The type of call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.CallType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleCallType
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.CallType." If "tbl_RoutingRule.CallType" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the routing rule to be used when displaying entries in the administrative console. For example, the display name for the default routing rule for attempting subscriber sign-in is "Attempt Sign-In."

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.DisplayName." If "tbl_RoutingRule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Flags

Property Name	Value
Description:	A flag indicating whether the rule can be edited or deleted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.Flags
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleFlags
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.Flags." If "tbl_RoutingRule.Flags" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language Cisco Unity Connection will associate with the call.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_RoutingRule.LanguageCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.LanguageCode." If "tbl_RoutingRule.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a RoutingRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.ObjectId." If "tbl_RoutingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Route_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Route_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Route_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The state of the rule (active, inactive, or invalid).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RuleState
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.State." If "tbl_RoutingRule.State" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Type

Property Name	Value
Description:	The type of rule based on call type (direct, forwarded, or system).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.Type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	RoutingRuleType
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.Type." If "tbl_RoutingRule.Type" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_RoutingRule.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_RoutingRule.UseCallLanguage." If "tbl_RoutingRule.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the routing rule inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.269. csp_ScheduleCreate

Creates a new Schedule object by inserting a new row into tbl_Schedule.

Additional Information

The parameter @DisplayName must be provided.

A Schedule must be either a System (Location) or Subscriber schedule. Either @Owner_LocationObjectId or @Owner_SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of this schedule to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date and time when schedule ends, or NULL if effective indefinitely.
Optional	@IsHoliday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule represents a holiday.
Optional	@LastModified	In	inherit	datetime (8 bytes)	The date and time this schedule was last modified in Exchange - for synchronization.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule belongs. Commonly referred to as a "system" schedule. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Owner_PersonalRuleSetObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule belongs. Otherwise, this attribute is set to NULL.
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date and time when schedule becomes active, or NULL if active immediately.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_ScheduleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @Owner_SubscriberObjectId was not found. Rather the object specified by @Owner_SubscriberObjectId is a user template. The names of the object (Subscriber), parameter (@Owner_SubscriberObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of this schedule to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Schedule.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.DisplayName." If "tbl_Schedule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date and time when schedule ends, or NULL if effective indefinitely.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.EndDate." If "tbl_Schedule.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@IsHoliday

Property Name	Value
Description:	A flag indicating whether this schedule represents a holiday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.IsHoliday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.IsHoliday." If "tbl_Schedule.IsHoliday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastModified

Property Name	Value
Description:	The date and time this schedule was last modified in Exchange - for synchronization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.LastModified
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.LastModified." If "tbl_Schedule.LastModified" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.ObjectId." If "tbl_Schedule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	Out
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule belongs. Commonly referred to as a "system" schedule. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_LocationObjectId." If "tbl_Schedule.Owner_LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_PersonalRuleSetObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_PersonalRuleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_PersonalRuleSetObjectId." If "tbl_Schedule.Owner_PersonalRuleSetObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_SubscriberObjectId." If "tbl_Schedule.Owner_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StartDate

Property Name	Value
Description:	The date and time when schedule becomes active, or NULL if active immediately.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.StartDate." If "tbl_Schedule.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this schedule can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Undeletable." If "tbl_Schedule.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.270. csp_ScheduleDelete

Deletes a Schedule object from tbl_Schedule as specified by the @ObjectId parameter.

Additional Information

Two FK Cascade Delete constraints ensure that all tbl_ScheduleDetail rows belonging to this Schedule object will be deleted and that all tbl_ScheduleSetMemberMap rows pertaining to this Schedule object will also be deleted.

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the schedule.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_ScheduleDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Schedule object was not found. The names of the object (Schedule), table (tbl_Schedule), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Schedule), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.
1016	EXCEPTION_OBJECT_UNDELETABLE	The Schedule specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Schedule) and table (tbl_Schedule), are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.ObjectId." If "tbl_Schedule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.271. csp_ScheduleDetailCreate

Creates a new ScheduleDetail object by inserting a new row into tbl_ScheduleDetail.

Additional Information

The parameter @ScheduleObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ScheduleObjectId	In	inherit	char (36 characters)	The unique identifier of the parent Schedule object to which this schedule detail row belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The ID of this object in the directory or message store if it represents an appointment in another groupware package.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date when this schedule detail ends. A value of NULL indicates the scheule is active indefinitely.
Optional	@EndTime	In	inherit	int (4 bytes)	The end time (in minutes) for the active day or days. The end time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL means "till the end of the day" (e.g. 11:59:59 PM in Linux land).
Optional	@IsActiveFriday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Friday.
Optional	@IsActiveMonday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Monday.
Optional	@IsActiveSaturday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Saturday.
Optional	@IsActiveSunday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Sunday.
Optional	@IsActiveThursday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on this Thursday.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsActiveTuesday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Tuesday.
Optional	@IsActiveWednesday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Wednesday.
Optional	@LastModified	In	inherit	datetime (8 bytes)	The time this appointment was last modified in Exchange - for synchronization.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a SceduelDetail object.
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date when this schedule detail becomes active. A value of NULL means the schedule is active immediately.
Optional	@StartTime	In	inherit	int (4 bytes)	The start time (in minutes) for the active day or days. The start time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL for the start time indicates 12:00 AM.
Optional	@Subject	In	inherit	nvarchar (2048 characters)	The subject matter or description for this schedule detail row.

Exceptions

csp_ScheduleDetailCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ScheduleObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The ID of this object in the directory or message store if it represents an appointment in another groupware package.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.DirectoryId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.DirectoryId." If "tbl_ScheduleDetail.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date when this schedule detail ends. A value of NULL indicates the schedule is active indefinitely.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.EndDate." If "tbl_ScheduleDetail.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EndTime

Property Name	Value
Description:	The end time (in minutes) for the active day or days. The end time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL means "till the end of the day" (e.g. 11:59:59 PM in Linux land).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.EndTime
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.EndTime." If "tbl_ScheduleDetail.EndTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@IsActiveFriday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Friday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveFriday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveFriday." If "tbl_ScheduleDetail.IsActiveFriday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveMonday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Monday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveMonday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveMonday." If "tbl_ScheduleDetail.IsActiveMonday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveSaturday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Saturday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveSaturday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveSaturday." If "tbl_ScheduleDetail.IsActiveSaturday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveSunday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Sunday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveSunday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveSunday." If "tbl_ScheduleDetail.IsActiveSunday" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@IsActiveThursday

Property Name	Value
Description:	A flag indicating whether this schedule is active on this Thursday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveThursday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveThursday." If "tbl_ScheduleDetail.IsActiveThursday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveTuesday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Tuesday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveTuesday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveTuesday." If "tbl_ScheduleDetail.IsActiveTuesday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveWednesday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Wednesday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveWednesday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveWednesday." If "tbl_ScheduleDetail.IsActiveWednesday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastModified

Property Name	Value
Description:	The time this appointment was last modified in Exchange - for synchronization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.LastModified
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.LastModified." If "tbl_ScheduleDetail.LastModified" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SceduelDetail object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.ObjectId." If "tbl_ScheduleDetail.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@ScheduleObjectId

Property Name	Value
Description:	The unique identifier of the parent Schedule object to which this schedule detail row belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.ScheduleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.ScheduleObjectId." If "tbl_ScheduleDetail.ScheduleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StartDate

Property Name	Value
Description:	The date when this schedule detail becomes active. A value of NULL means the schedule is active immediately.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.StartDate." If "tbl_ScheduleDetail.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StartTime

Property Name	Value
Description:	The start time (in minutes) for the active day or days. The start time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL for the start time indicates 12:00 AM.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.StartTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.StartTime." If "tbl_ScheduleDetail.StartTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Subject

Property Name	Value
Description:	The subject matter or description for this schedule detail row.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.Subject

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2048 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.Subject." If "tbl_ScheduleDetail.Subject" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.272. csp_ScheduleDetailDelete

Deletes a ScheduleDetail object from tbl_ScheduleDetail as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScehduelDetail object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_ScheduleDetailDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified ScheduleDetail object was not found. The names of the object (Schedule detail), table (tbl_ScheduleDetail), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_ScheduleDetail), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SceduelDetail object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.ObjectId." If "tbl_ScheduleDetail.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.273. csp_ScheduleDetailModify

Updates the attributes of a ScheduleDetail object based on the values passed in via the parameters. The @ObjectId parameter identifies the ScheduleDetail object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScheduleDetail object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The ID of this object in the directory or message store if it represents an appointment in another groupware package.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date when this schedule detail ends. A value of NULL indicates the schedule is active indefinitely.
Optional	@EndTime	In	inherit	int (4 bytes)	The end time (in minutes) for the active day or days. The end time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL means "till the end of the day" (e.g. 11:59:59 PM in Linux land).
Optional	@IsActiveFriday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Friday.
Optional	@IsActiveMonday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Monday.
Optional	@IsActiveSaturday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Saturday.
Optional	@IsActiveSunday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Sunday.
Optional	@IsActiveThursday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on this Thursday.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsActiveTuesday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Tuesday.
Optional	@IsActiveWednesday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule is active on Wednesday.
Optional	@LastModified	In	inherit	datetime (8 bytes)	The time this appointment was last modified in Exchange - for synchronization.
Optional	@ScheduleObjectId	In	inherit	char (36 characters)	The unique identifier of the parent Schedule object to which this schedule detail row belongs.
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date when this schedule detail becomes active. A value of NULL means the schedule is active immediately.
Optional	@StartTime	In	inherit	int (4 bytes)	The start time (in minutes) for the active day or days. The start time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL for the start time indicates 12:00 AM.
Optional	@Subject	In	inherit	nvarchar (2048 characters)	The subject matter or description for this schedule detail row.

Exceptions

csp_ScheduleDetailModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified ScheduleDetail object was not found. The names of the object (Schedule detail), table (tbl_ScheduleDetail), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The ID of this object in the directory or message store if it represents an appointment in another groupware package.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.DirectoryId." If "tbl_ScheduleDetail.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date when this schedule detail ends. A value of NULL indicates the scheule is active indefinitely.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.EndDate." If "tbl_ScheduleDetail.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EndTime

Property Name	Value
Description:	The end time (in minutes) for the active day or days. The end time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL means "till the end of the day" (e.g. 11:59:59 PM in Linux land).
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_ScheduleDetail.EndTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.EndTime." If "tbl_ScheduleDetail.EndTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@IsActiveFriday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Friday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveFriday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveFriday." If "tbl_ScheduleDetail.IsActiveFriday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveMonday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Monday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveMonday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveMonday." If "tbl_ScheduleDetail.IsActiveMonday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveSaturday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Saturday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveSaturday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveSaturday." If "tbl_ScheduleDetail.IsActiveSaturday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveSunday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Sunday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveSunday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveSunday." If "tbl_ScheduleDetail.IsActiveSunday" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@IsActiveThursday

Property Name	Value
Description:	A flag indicating whether this schedule is active on this Thursday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveThursday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveThursday." If "tbl_ScheduleDetail.IsActiveThursday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveTuesday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Tuesday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveTuesday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveTuesday." If "tbl_ScheduleDetail.IsActiveTuesday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsActiveWednesday

Property Name	Value
Description:	A flag indicating whether this schedule is active on Wednesday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.IsActiveWednesday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.IsActiveWednesday." If "tbl_ScheduleDetail.IsActiveWednesday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastModified

Property Name	Value
Description:	The time this appointment was last modified in Exchange - for synchronization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.LastModified
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.LastModified." If "tbl_ScheduleDetail.LastModified" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SceduelDetail object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.ObjectId." If "tbl_ScheduleDetail.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScheduleObjectId

Property Name	Value
Description:	The unique identifier of the parent Schedule object to which this schedule detail row belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.ScheduleObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.ScheduleObjectId." If "tbl_ScheduleDetail.ScheduleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StartDate

Property Name	Value
Description:	The date when this schedule detail becomes active. A value of NULL means the schedule is active immediately.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.StartDate." If "tbl_ScheduleDetail.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StartTime

Property Name	Value
Description:	The start time (in minutes) for the active day or days. The start time is stored as the number of minutes from midnight. So a value of 480 would mean 8:00 AM and 1020 would mean 5:00 PM. In addition, a value of NULL for the start time indicates 12:00 AM.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.StartTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.StartTime." If "tbl_ScheduleDetail.StartTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Subject

Property Name	Value
Description:	The subject matter or description for this schedule detail row.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleDetail.Subject

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2048 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleDetail.Subject." If "tbl_ScheduleDetail.Subject" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.274. csp_ScheduleIsActive

Determines if a Schedule is currently active. Returns a value of 1 in @IsActive if the Schedule object specified by @ScheduleObjectId is found to be active.

Additional Information

The parameter ScheduleObjectId must be provided.

This procedure is not intended to be called directly by clients. Rather it is intended to be called from csp_ScheduleSetIsActive, since that is the top level schedule object.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ScheduleObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Exclude	In	explicit-with default	smallint (2 bytes)	Set to 1 if the schedule set is exclusionary (e.g., a holiday).
Optional	@IsActive	Out	ignore	smallint (2 bytes)	Indicates if the schedule set is active. A value of 1 indicates the schedule set is active.
Optional	@ReferenceTime	In	ignore	datetime (8 bytes)	Reference time against which to evaluate the schedule. Defaults to the current local time.

Exceptions

csp_ScheduleIsActive will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ScheduleObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Exclude

Property Name	Value
Description:	Set to 1 if the scheduleset is exclusionary (e.g., a holiday).
Notes:	
Business Rules:	
Developer Notes:	We need to know this because if an exclusionary ScheduleSet has a schedule with no details, it should not be active.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@IsActive

Property Name	Value
Description:	Indicates if the schedule set is active. A value of 1 indicates the schedule set is active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ReferenceTime

Property Name	Value
Description:	Reference time against which to evaluate the schedule. Defaults to the current local time.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ScheduleObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.ObjectId." If "tbl_Schedule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.275. csp_ScheduleModify

Updates the attributes of a Schedule object based on the values passed in via the parameters. The @ObjectId parameter identifies the Schedule object that is updated.

Additional Information

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of this schedule to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date and time when schedule ends, or NULL if effective indefinitely.
Optional	@IsHoliday	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule represents a holiday.
Optional	@LastModified	In	inherit	datetime (8 bytes)	The date and time this schedule was last modified in Exchange - for synchronization.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule belongs. Commonly referred to as a "system" schedule. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Owner_PersonalRuleSetObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this schedule. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule belongs. Otherwise, this attribute is set to NULL.
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date and time when schedule becomes active, or NULL if active immediately.
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_ScheduleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Schedule object was not found. The names of the object (Schedule), table (tbl_Schedule), and column (ObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @Owner_SubscriberObjectId was not found. Rather the object specified by @Owner_SubscriberObjectId is a user template. The names of the object (subscriber), parameter (@Owner_SubscriberObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of this schedule to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Schedule.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.DisplayName." If "tbl_Schedule.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date and time when schedule ends, or NULL if effective indefinitely.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.EndDate." If "tbl_Schedule.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@IsHoliday

Property Name	Value
Description:	A flag indicating whether this schedule represents a holiday.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.IsHoliday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.IsHoliday." If "tbl_Schedule.IsHoliday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastModified

Property Name	Value
Description:	The date and time this schedule was last modified in Exchange - for synchronization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.LastModified
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.LastModified." If "tbl_Schedule.LastModified" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Schedule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.ObjectId." If "tbl_Schedule.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule belongs. Commonly referred to as a "system" schedule. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_LocationObjectId." If "tbl_Schedule.Owner_LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_PersonalRuleSetObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_PersonalRuleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_PersonalRuleSetObjectId." If "tbl_Schedule.Owner_PersonalRuleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectId

Property Name	Value
Description:	The owner of this schedule. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Owner_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Owner_SubscriberObjectId." If "tbl_Schedule.Owner_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StartDate

Property Name	Value
Description:	The date and time when schedule becomes active, or NULL if active immediately.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.StartDate." If "tbl_Schedule.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this schedule can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.Undeletable." If "tbl_Schedule.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.276. csp_ScheduleSetCreate

Creates a new ScheduleSet object by inserting a new row into tbl_ScheduleSet. A ScheduleSet is a group of schedules.

Additional Information

The parameter @DisplayName must be provided.

A ScheduleSet must be either a System (Location) or Subscriber schedule set. Either @Owner_LocationObjectId or @Owner_SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this schedule set to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule set (i.e., "system" schedule) belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_PersonalRuleSetObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule set belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule set belongs. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule set can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_ScheduleSetCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this schedule set to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.DisplayName." If "tbl_ScheduleSet.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.ObjectId." If "tbl_ScheduleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule set (i.e., "system" schedule) belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_LocationObjectId." If "tbl_ScheduleSet.Owner_LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_PersonalRuleSetObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule set belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_PersonalRuleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_PersonalRuleSetObjectId." If "tbl_ScheduleSet.Owner_PersonalRuleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule set belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_SubscriberObjectId." If "tbl_ScheduleSet.Owner_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this schedule set can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Undeletable." If "tbl_ScheduleSet.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.277. csp_ScheduleSetDelete

Deletes a ScheduleSet object from tbl_ScheduleSet as specified by the @ObjectId parameter.

Additional Information

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the schedule set.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_ScheduleSetDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified ScheduleSet object was not found. The names of the object (Schedule set), table (tbl_ScheduleSet), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_ScheduleSet), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.
1016	EXCEPTION_OBJECT_UNDELETABLE	The ScheduleSet specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Schedule set) and table (tbl_ScheduleSet), are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.ObjectId." If "tbl_ScheduleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.278. csp_ScheduleSetIsActive

Determines if a ScheduleSet is currently active. Returns a value of 1 in @IsActive if the ScheduleSet object specified by @ScheduleSetObjectId is found to be active.

Additional Information

The parameters @IsActive and @ScheduleSetObjectId must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ScheduleSetObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsActive	Out	ignore	smallint (2 bytes)	Indicates if the schedule set is active. A value of 1 indicates the schedule set is active.
Optional	@IsHoliday	Out	inherit	smallint (2 bytes)	This will be set to 1 (true) if the schedule set is inactive due to a holiday schedule.
Optional	@ReferenceTime	In	ignore	datetime (8 bytes)	Reference time against which to evaluate the schedule set. Defaults to the current local time.

Exceptions

csp_ScheduleSetIsActive will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ScheduleSetObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsActive

Property Name	Value
Description:	Indicates if the schedule set is active. A value of 1 indicates the schedule set is active.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@IsHoliday

Property Name	Value
Description:	This will be set to 1 (true) if the schedule set is inactive due to a holiday schedule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Schedule.IsHoliday
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Schedule.IsHoliday." If "tbl_Schedule.IsHoliday" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	Out
Update Column Value From Parameter:	True

@ReferenceTime

Property Name	Value
Description:	Reference time against which to evaluate the schedule set. Defaults to the current local time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ScheduleSetObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.ObjectId." If "tbl_ScheduleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.279. csp_ScheduleSetMemberMapCreate

Creates a new ScheduleSetMemberMap object by inserting a new row into tbl_ScheduleSetMemberMap thereby assigning a Schedule to a particular ScheduleSet.

Additional Information

The parameters @ScheduleObjectId and @ScheduleSetObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ScheduleObjectId	In	inherit	char (36 characters)	The unique identifier of the Schedule object that is a member of the schedule set.
Required	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object to which the schedule belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Exclude	In	inherit	smallint (2 bytes)	A flag indicating whether the schedule is to be included or excluded from the schedule set.

Exceptions

csp_ScheduleSetMemberMapCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ScheduleObjectId and @ScheduleSetObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Exclude

Property Name	Value
Description:	A flag indicating whether the schedule is to be included or excluded from the schedule set.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSetMemberMap.Exclude
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSetMemberMap.Exclude." If "tbl_ScheduleSetMemberMap.Exclude" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ScheduleObjectId

Property Name	Value
Description:	The unique identifier of the Schedule object that is a member of the schedule set.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSetMemberMap.ScheduleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSetMemberMap.ScheduleObjectId." If "tbl_ScheduleSetMemberMap.ScheduleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object to which the schedule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSetMemberMap.ScheduleSetObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSetMemberMap.ScheduleSetObjectId." If "tbl_ScheduleSetMemberMap.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.280. csp_ScheduleSetMemberMapDelete

Deletes a ScheduleSetMemberMap object from tbl_ScheduleSetMemberMap as specified by the @ScheduleObjectId and @ScheduleSetObjectId parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ScheduleObjectId	In	inherit	char (36 characters)	The unique identifier of the Schedule object that is a member of the schedule set.
Required	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the ScheduleSet object to which the schedule belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_ScheduleSetMemberMapDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ScheduleObjectId and @ScheduleSetObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified ScheduleSetMemberMap object was not found. The names of the object (Schedule set member map), table (tbl_ScheduleSetMemberMap), and columns (ScheduleObjectId and ScheduleSetObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_ScheduleSetmemberMap), and the columns (ScheduleObjectId and ScheduleSetObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScheduleObjectId

Property Name	Value
Description:	The unique identifier of the Schedule object that is a member of the schedule set.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSetMemberMap.ScheduleObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSetMemberMap.ScheduleObjectId." If "tbl_ScheduleSetMemberMap.ScheduleObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the ScheduleSet object to which the schedule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSetMemberMap.ScheduleSetObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSetMemberMap.ScheduleSetObjectId." If "tbl_ScheduleSetMemberMap.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.281. csp_ScheduleSetModify

Updates the attributes of a ScheduleSet object based on the values passed in via the parameters. The @ObjectId parameter identifies the ScheduleSet object that is updated.

Additional Information

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this schedule set to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule set (i.e., "system" schedule) belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_PersonalRuleSetObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule set belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this schedule set. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule set belongs. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this schedule set can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.

Exceptions

csp_ScheduleSetModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified ScheduleSet object was not found. The names of the object (Schedule set), table (tbl_ScheduleSet), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this schedule set to be used when displaying entries in the administrative console and Cisco Personal Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.DisplayName." If "tbl_ScheduleSet.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a ScheduleSet object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.ObjectId." If "tbl_ScheduleSet.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a LocationVMS, the unique identifier of the LocationVMS object to which this schedule set (i.e., "system" schedule) belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_LocationObjectId." If "tbl_ScheduleSet.Owner_LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_PersonalRuleSetObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a personal rule set, the unique identifier of the PersonalRuleSet to which this schedule set belongs. Otherwise, this attribute is set to NULL.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_PersonalRuleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_PersonalRuleSetObjectId." If "tbl_ScheduleSet.Owner_PersonalRuleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectId

Property Name	Value
Description:	The owner of this schedule set. If the owner is a subscriber, the unique identifier of the Subscriber object to which this schedule set belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Owner_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Owner_SubscriberObjectId." If "tbl_ScheduleSet.Owner_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this schedule set can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_ScheduleSet.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_ScheduleSet.Undeletable." If "tbl_ScheduleSet.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.282. csp_ServiceModify

Updates the attributes of a Service object based on the values passed in via the parameters. The @ObjectId parameter identifies the Service object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Unique identifier for this service.
Optional	@AlarmCatalogId	In	inherit	varchar (254 characters)	Alarm catalog file name.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DefaultMaxTraceFile Number	In	inherit	int (4 bytes)	The default value for the "MaxTraceFileNumber" column, the maximum number of trace files for this process.
Optional	@DefaultMaxTraceFile Size	In	inherit	int (4 bytes)	The default value for the "MaxTraceFileSize" column, the maximum size of the trace file for this process (in MB).
Optional	@DefaultMaxTraceState mentsPerFile	In	inherit	int (4 bytes)	The default value for the "MaxTraceStatementsPerFile" column, maximum number of trace statements per file.
Optional	@Description	In	inherit	lvarchar (256 characters)	Description of the service.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	Unitue text name of the service for display purposes.
Optional	@MaxTraceFileNumber	In	inherit	int (4 bytes)	Maximum number of trace files for this process.
Optional	@MaxTraceFileSize	In	inherit	int (4 bytes)	Maximum size of the trace file for this process (in MB).
Optional	@MaxTraceStatementsP erFile	In	inherit	int (4 bytes)	Maximum number of trace statements per file.
Optional	@ProcessName	In	inherit	varchar (254 characters)	Name of process.

Exceptions

csp_ServiceModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Service object was not found. The names of the object (Service), table (tbl_Service), and column (ObjectId) are included with the exception message.

Parameter Properties

@AlarmCatalogId

Property Name	Value
Description:	Alarm catalog file name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.AlarmCatalogId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.AlarmCatalogId." If "tbl_Service.AlarmCatalogId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DefaultMaxTraceFileNumber

Property Name	Value
Description:	The default value for the "MaxTraceFileNumber" column, the maximum number of trace files for this process.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.DefaultMaxTraceFileNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.DefaultMaxTraceFileNumber." If "tbl_Service.DefaultMaxTraceFileNumber" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@DefaultMaxTraceFileSize

Property Name	Value
Description:	The default value for the "MaxTraceFileSize" column, the maximum size of the trace file for this process (in MB).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.DefaultMaxTraceFileSize
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.DefaultMaxTraceFileSize." If "tbl_Service.DefaultMaxTraceFileSize" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultMaxTraceStatementsPerFile

Property Name	Value
Description:	The default value for the "MaxTraceStatementsPerFile" column, maximum number of trace statements per file.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.DefaultMaxTraceStatementsPerFile
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.DefaultMaxTraceStatementsPerFile." If "tbl_Service.DefaultMaxTraceStatementsPerFile" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@Description

Property Name	Value
Description:	Description of the service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.Description
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.Description." If "tbl_Service.Description" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	Unitue text name of the service for display purposes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Service.DisplayName." If "tbl_Service.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxTraceFileNumber

Property Name	Value
Description:	Maximum number of trace files for this process.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.MaxTraceFileNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.MaxTraceFileNumber." If "tbl_Service.MaxTraceFileNumber" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxTraceFileSize

Property Name	Value
Description:	Maximum size of the trace file for this process (in MB).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.MaxTraceFileSize
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.MaxTraceFileSize." If "tbl_Service.MaxTraceFileSize" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxTraceStatementsPerFile

Property Name	Value
Description:	Maximum number of trace statements per file.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.MaxTraceStatementsPerFile
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.MaxTraceStatementsPerFile." If "tbl_Service.MaxTraceStatementsPerFile" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Unique identifier for this service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Service.ObjectId." If "tbl_Service.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ProcessName

Property Name	Value
Description:	Name of process.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Service.ProcessName

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Service.ProcessName." If "tbl_Service.ProcessName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.283. csp_SMPPProviderCreate

Creates a new SMPPProvider object, by inserting a new row into tbl_SMPPProvider. A SMPPProvider object contains the configuration data for a Short Message Peer-To-Peer Provider in tbl_SMPPProvider.

Additional Information

The parameters @remote_addr, @system_id, and @TextName must be provided.

Either @Owner_LocationObjectId (owned by the "system") or @Owner_SubscriberObjectId (owned by a subscriber) , but not both, need to be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@remote_addr	In	inherit	nvarchar (65 characters)	The IP address or host name of the SMPP server at the SMSC.
Required	@system_id	In	inherit	nvarchar (16 characters)	The name or system ID that Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Required	@TextName	In	inherit	nvarchar (128 characters)	The unique text name of the SMPP Provider that represents the service provider in Cisco Unity Connection applications and is used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@address_range	In	inherit	nvarchar (41 characters)	A set of addresses or a single address the SMPP server uses to communicate with the Cisco Unity Connection server.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@data_coding	In	inherit	smallint (2 bytes)	The character set that each SMS message will be converted to when the messages are sent to the SMS device.
Optional	@dest_addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@dest_addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@destination_addr	In	inherit	nvarchar (65 characters)	The destination address of this short message.
Optional	@esm_class	In	inherit	int (4 bytes)	The special message attributes (Message Mode and Message Type) associated with the short message.
Optional	@interface_version	In	inherit	int (4 bytes)	The version of the SMPP protocol (e.g., v3.3 or v3.4) that the SMPP server uses to communicate with ESMEs like Cisco Unity Connection.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the SMPP is enabled and available to all applicable subscribers to use for SMS (SMPP) message notifications.
Optional	@local_addr	In	inherit	nvarchar (65 characters)	The IP address or hostname.
Optional	@local_port	In	inherit	int (4 bytes)	The port number.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this SMPP provider. If the owner is the system, the unique identifier of the LocationVMS object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this SMPP provider. If the owner is a subscriber, the unique identifier of the Subscriber object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Optional	@password	In	inherit	nvarchar (9 characters)	The password (as provided by the service provider) Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Optional	@priority_flag	In	inherit	smallint (2 bytes)	The priority level of the message.
Optional	@protocol_id	In	inherit	int (4 bytes)	The protocol identifier.
Optional	@registered_delivery	In	inherit	int (4 bytes)	Whether an SMSC delivery receipt or an SME acknowledgment is required.
Optional	@remote_port	In	inherit	int (4 bytes)	The port used by the SMPP server to connect to an ESME like Cisco Unity Connection.
Optional	@replace_if_present_flag	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection can request the SMSC to replace a previously submitted message, that is still pending delivery. The SMSC will replace an existing message provided that the source address, destination address and service_type match the same fields in the new message.
Optional	@schedule_delivery_time	In	inherit	nvarchar (17 characters)	The time the short message is scheduled by the SMSC for delivery. Set to NULL for immediate message delivery.
Optional	@service_type	In	inherit	nvarchar (6 characters)	The SMS Application service associated with the message.
Optional	@sm_default_msg_id	In	inherit	int (4 bytes)	The short message to send from a list of predefined short messages stored in the SMSC.
Optional	@source_addr	In	inherit	nvarchar (65 characters)	The IP address or hostname of the SME which originated this message.
Optional	@source_addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@source_addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@system_type	In	inherit	nvarchar (13 characters)	The type of ESME that is communicating with the SMPP server at the SMSC. For example, an application like Cisco Unity Connection may be categorized as a "VMS" (voice mail system).
Optional	@validity_period	In	inherit	nvarchar (17 characters)	The SMSC expiration time, after which the message should be discarded if not delivered to the destination.

Exceptions

csp_SMPPProviderCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@remote_addr, @system_id, and @TextName) is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	The @Owner_SubscriberObjectId is not a Subscriber, but rather a User/Subscriber template. A template cannot own a SMPP Provider. The name of the object (Subscriber), parameter (@Owner_SubscriberObjectId), table (tbl_UserTemplate) and column (ObjectId) are included with the message.

Parameter Properties

@addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.addr_npi." If "tbl_SMPPProvider.addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.addr_ton." If "tbl_SMPPProvider.addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@address_range

Property Name	Value
Description:	A set of addresses or a single address the SMPP server uses to communicate with the Cisco Unity Connection server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.address_range

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (41 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.address_range." If "tbl_SMPPProvider.address_range" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@data_coding

Property Name	Value
Description:	The character set that each SMS message will be converted to when the messages are sent to the SMS device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.data_coding
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DataCoding
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.data_coding." If "tbl_SMPPProvider.data_coding" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@dest_addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.dest_addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.dest_addr_npi." If "tbl_SMPPProvider.dest_addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@dest_addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.dest_addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.dest_addr_ton." If "tbl_SMPPProvider.dest_addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@destination_addr

Property Name	Value
Description:	The destination address of this short message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.destination_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.destination_addr." If "tbl_SMPPProvider.destination_addr" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@esm_class

Property Name	Value
Description:	The special message attributes (Message Mode and Message Type) associated with the short message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.esm_class
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.esm_class." If "tbl_SMPPProvider.esm_class" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@interface_version

Property Name	Value
Description:	The version of the SMPP protocol (e.g., v3.3 or v3.4) that the SMPP server uses to communicate with ESMEs like Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.interface_version
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.interface_version." If "tbl_SMPPProvider.interface_version" can be NULL, then explicit NULL is allowed.
Default Value:	52
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the SMPP is enabled and available to all applicable subscribers to use for SMS (SMPP) message notifications.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.IsEnabled." If "tbl_SMPPProvider.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@local_addr

Property Name	Value
Description:	The IP address or hostname.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.local_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.local_addr." If "tbl_SMPPProvider.local_addr" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@local_port

Property Name	Value
Description:	The port number.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.local_port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.local_port." If "tbl_SMPPProvider.local_port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.ObjectId." If "tbl_SMPPProvider.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this SMPP provider. If the owner is the system, the unique identifier of the LocationVMS object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.Owner_LocationObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.Owner_LocationObjectID." If "tbl_SMPPProvider.Owner_LocationObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectID

Property Name	Value
Description:	The owner of this SMPP provider. If the owner is a subscriber, the unique identifier of the Subscriber object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.Owner_SubscriberObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.Owner_SubscriberObjectID." If "tbl_SMPPProvider.Owner_SubscriberObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@password

Property Name	Value
Description:	The password (as provided by the service provider) Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_SMPPProvider.password
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (9 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.password." If "tbl_SMPPProvider.password" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@priority_flag

Property Name	Value
Description:	The priority level of the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.priority_flag
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SMSPriorityFlag
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.priority_flag." If "tbl_SMPPProvider.priority_flag" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@protocol_id

Property Name	Value
Description:	The protocol identifier.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.protocol_id
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.protocol_id." If "tbl_SMPPProvider.protocol_id" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@registered_delivery

Property Name	Value
Description:	Whether an SMSC delivery receipt or an SME acknowledgment is required.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.registered_delivery
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.registered_delivery." If "tbl_SMPPProvider.registered_delivery" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@remote_addr

Property Name	Value
Description:	The IP address or host name of the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.remote_addr
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.remote_addr." If "tbl_SMPPProvider.remote_addr" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@remote_port

Property Name	Value
Description:	The port used by the SMPP server to connect to an ESME like Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.remote_port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.remote_port." If "tbl_SMPPProvider.remote_port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@replace_if_present_flag

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection can request the SMSC to replace a previously submitted message, that is still pending delivery. The SMSC will replace an existing message provided that the source address, destination address and service_type match the same fields in the new message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.replace_if_present_flag
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.replace_if_present_flag." If "tbl_SMPPProvider.replace_if_present_flag" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@schedule_delivery_time

Property Name	Value
Description:	The time the short message is scheduled by the SMSC for delivery. Set to NULL for immediate message delivery.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.schedule_delivery_time
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (17 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.schedule_delivery_time." If "tbl_SMPPProvider.schedule_delivery_time" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@service_type

Property Name	Value
Description:	The SMS Application service associated with the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.service_type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (6 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.service_type." If "tbl_SMPPProvider.service_type" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@sm_default_msg_id

Property Name	Value
Description:	The short message to send from a list of predefined short messages stored in the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.sm_default_msg_id
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.sm_default_msg_id." If "tbl_SMPPProvider.sm_default_msg_id" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@source_addr

Property Name	Value
Description:	The IP address or hostname of the SME which originated this message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr." If "tbl_SMPPProvider.source_addr" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@source_addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr_npi." If "tbl_SMPPProvider.source_addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@source_addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr_ton." If "tbl_SMPPProvider.source_addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@system_id

Property Name	Value
Description:	The name or system ID that Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.system_id
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (16 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.system_id." If "tbl_SMPPProvider.system_id" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@system_type

Property Name	Value
Description:	The type of ESME that is communicating with the SMPP server at the SMSC. For example, an application like Cisco Unity Connection may be categorized as a "VMS" (voice mail system).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.system_type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (13 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.system_type." If "tbl_SMPPProvider.system_type" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TextName

Property Name	Value
Description:	The unique text name of the SMPP Provider that represents the service provider in Cisco Unity Connection applications and is used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.TextName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.TextName." If "tbl_SMPPProvider.TextName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@validity_period

Property Name	Value
Description:	The SMSC expiration time, after which the message should be discarded if not delivered to the destination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.validity_period
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (17 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.validity_period." If "tbl_SMPPProvider.validity_period" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.284. csp_SMPPProviderDelete

Deletes a SMPPProvider object from tbl_SMPPProvider as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_SMPPProviderDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified SMPPProvider object was not found. The names of the object (SMPP provider), table (tbl_SMPPProvider), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_SMPPProvider), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.ObjectId." If "tbl_SMPPProvider.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.285. csp_SMPPProviderModify

Updates the attributes of a SMPPProvider object based on the values passed in via the parameters. The @ObjectId parameter identifies the SMPPProvider object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.
Optional	@addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@address_range	In	inherit	nvarchar (41 characters)	A set of addresses or a single address the SMPP server uses to communicate with the Cisco Unity Connection server.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@data_coding	In	inherit	smallint (2 bytes)	The character set that each SMS message will be converted to when the messages are sent to the SMS device.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@dest_addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@dest_addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@destination_addr	In	inherit	nvarchar (65 characters)	The destination address of this short message.
Optional	@esm_class	In	inherit	int (4 bytes)	The special message attributes (Message Mode and Message Type) associated with the short message.
Optional	@interface_version	In	inherit	int (4 bytes)	The version of the SMPP protocol (e.g., v3.3 or v3.4) that the SMPP server uses to communicate with ESMEs like Cisco Unity Connection.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the SMPP is enabled and available to all applicable subscribers to use for SMS (SMPP) message notifications.
Optional	@local_addr	In	inherit	nvarchar (65 characters)	The IP address or hostname.
Optional	@local_port	In	inherit	int (4 bytes)	The port number.
Optional	@Owner_LocationObjectId	In	inherit	char (36 characters)	The owner of this SMPP provider. If the owner is the system, the unique identifier of the LocationVMS object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Optional	@Owner_SubscriberObjectId	In	inherit	char (36 characters)	The owner of this SMPP provider. If the owner is a subscriber, the unique identifier of the Subscriber object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Optional	@password	In	inherit	nvarchar (9 characters)	The password (as provided by the service provider) Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Optional	@priority_flag	In	inherit	smallint (2 bytes)	The priority level of the message.
Optional	@protocol_id	In	inherit	int (4 bytes)	The protocol identifier.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@registered_delivery	In	inherit	int (4 bytes)	Whether an SMSC delivery receipt or an SME acknowledgment is required.
Optional	@remote_addr	In	inherit	nvarchar (65 characters)	The IP address or host name of the SMPP server at the SMSC.
Optional	@remote_port	In	inherit	int (4 bytes)	The port used by the SMPP server to connect to an ESME like Cisco Unity Connection.
Optional	@replace_if_present_flag	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection can request the SMSC to replace a previously submitted message, that is still pending delivery. The SMSC will replace an existing message provided that the source address, destination address and service_type match the same fields in the new message.
Optional	@schedule_delivery_time	In	inherit	nvarchar (17 characters)	The time the short message is scheduled by the SMSC for delivery. Set to NULL for immediate message delivery.
Optional	@service_type	In	inherit	nvarchar (6 characters)	The SMS Application service associated with the message.
Optional	@sm_default_msg_id	In	inherit	int (4 bytes)	The short message to send from a list of predefined short messages stored in the SMSC.
Optional	@source_addr	In	inherit	nvarchar (65 characters)	The IP address or hostname of the SME which originated this message.
Optional	@source_addr_npi	In	inherit	smallint (2 bytes)	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@source_addr_ton	In	inherit	smallint (2 bytes)	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Optional	@system_id	In	inherit	nvarchar (16 characters)	The name or system ID that Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@system_type	In	inherit	nvarchar (13 characters)	The type of ESME that is communicating with the SMPP server at the SMSC. For example, an application like Cisco Unity Connection may be categorized as a "VMS" (voice mail system).
Optional	@TextName	In	inherit	nvarchar (128 characters)	The unique text name of the SMPP Provider that represents the service provider in Cisco Unity Connection applications and is used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@validity_period	In	inherit	nvarchar (17 characters)	The SMSC expiration time, after which the message should be discarded if not delivered to the destination.

Exceptions

csp_SMPPProviderModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified SMPPProvider object was not found. The names of the object (SMPP provider), table (tbl_SMPPProvider), and column (ObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	The owner of an SMPP provider cannot be a user template. The names of the object (User), parameter (@Owner_UserObjectId), table (vw_Subscriber) and column (ObjectId) are included with the exception message.

Parameter Properties

@addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.addr_npi." If "tbl_SMPPProvider.addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.addr_ton." If "tbl_SMPPProvider.addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@address_range

Property Name	Value
Description:	A set of addresses or a single address the SMPP server uses to communicate with the Cisco Unity Connection server.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.address_range
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (41 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.address_range." If "tbl_SMPPProvider.address_range" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@data_coding

Property Name	Value
Description:	The character set that each SMS message will be converted to when the messages are sent to the SMS device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.data_coding
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DataCoding
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.data_coding." If "tbl_SMPPProvider.data_coding" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@dest_addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.dest_addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.dest_addr_npi." If "tbl_SMPPProvider.dest_addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@dest_addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.dest_addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.dest_addr_ton." If "tbl_SMPPProvider.dest_addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@destination_addr

Property Name	Value
Description:	The destination address of this short message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.destination_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.destination_addr." If "tbl_SMPPProvider.destination_addr" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@esm_class

Property Name	Value
Description:	The special message attributes (Message Mode and Message Type) associated with the short message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.esm_class
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.esm_class." If "tbl_SMPPProvider.esm_class" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@interface_version

Property Name	Value
Description:	The version of the SMPP protocol (e.g., v3.3 or v3.4) that the SMPP server uses to communicate with ESMEs like Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.interface_version
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.interface_version." If "tbl_SMPPProvider.interface_version" can be NULL, then explicit NULL is allowed.
Default Value:	52
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the SMPP is enabled and available to all applicable subscribers to use for SMS (SMPP) message notifications.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.IsEnabled." If "tbl_SMPPProvider.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@local_addr

Property Name	Value
Description:	The IP address or hostname.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.local_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.local_addr." If "tbl_SMPPProvider.local_addr" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@local_port

Property Name	Value
Description:	The port number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.local_port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.local_port." If "tbl_SMPPProvider.local_port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system generated identifier for a SMPP Provider object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.ObjectId." If "tbl_SMPPProvider.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Owner_LocationObjectId

Property Name	Value
Description:	The owner of this SMPP provider. If the owner is the system, the unique identifier of the LocationVMS object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.Owner_LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.Owner_LocationObjectId." If "tbl_SMPPProvider.Owner_LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Owner_SubscriberObjectId

Property Name	Value
Description:	The owner of this SMPP provider. If the owner is a subscriber, the unique identifier of the Subscriber object to which this SMPP Provider belongs. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.Owner_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.Owner_SubscriberObjectId." If "tbl_SMPPProvider.Owner_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@password

Property Name	Value
Description:	The password (as provided by the service provider) Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.password
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (9 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.password." If "tbl_SMPPProvider.password" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@priority_flag

Property Name	Value
Description:	The priority level of the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.priority_flag
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SMSPriorityFlag
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.priority_flag." If "tbl_SMPPProvider.priority_flag" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@protocol_id

Property Name	Value
Description:	The protocol identifier.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.protocol_id
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.protocol_id." If "tbl_SMPPProvider.protocol_id" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@registered_delivery

Property Name	Value
Description:	Whether an SMSC delivery receipt or an SME acknowledgment is required.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.registered_delivery
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.registered_delivery." If "tbl_SMPPProvider.registered_delivery" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@remote_addr

Property Name	Value
Description:	The IP address or host name of the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.remote_addr
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.remote_addr." If "tbl_SMPPProvider.remote_addr" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@remote_port

Property Name	Value
Description:	The port used by the SMPP server to connect to an ESME like Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.remote_port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.remote_port." If "tbl_SMPPProvider.remote_port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@replace_if_present_flag

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection can request the SMSC to replace a previously submitted message, that is still pending delivery. The SMSC will replace an existing message provided that the source address, destination address and service_type match the same fields in the new message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.replace_if_present_flag
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.replace_if_present_flag." If "tbl_SMPPProvider.replace_if_present_flag" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@schedule_delivery_time

Property Name	Value
Description:	The time the short message is scheduled by the SMSC for delivery. Set to NULL for immediate message delivery.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.schedule_delivery_time
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (17 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.schedule_delivery_time." If "tbl_SMPPProvider.schedule_delivery_time" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@service_type

Property Name	Value
Description:	The SMS Application service associated with the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.service_type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (6 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.service_type." If "tbl_SMPPProvider.service_type" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@sm_default_msg_id

Property Name	Value
Description:	The short message to send from a list of predefined short messages stored in the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.sm_default_msg_id
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.sm_default_msg_id." If "tbl_SMPPProvider.sm_default_msg_id" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@source_addr

Property Name	Value
Description:	The IP address or hostname of the SME which originated this message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (65 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr." If "tbl_SMPPProvider.source_addr" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@source_addr_npi

Property Name	Value
Description:	The numeric plan indicator that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr_npi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NumberingPlanIdentity
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr_npi." If "tbl_SMPPProvider.source_addr_npi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@source_addr_ton

Property Name	Value
Description:	The type of number (TON) that subscribers can use when specifying the To and From fields for SMS (SMPP) message notification in the Cisco Unity Connection Administration and the Cisco Unity Assistant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.source_addr_ton
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TypeOfNumber
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.source_addr_ton." If "tbl_SMPPProvider.source_addr_ton" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@system_id

Property Name	Value
Description:	The name or system ID that Cisco Unity Connection uses to identify itself when communicating with the SMPP server at the SMSC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.system_id
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (16 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.system_id." If "tbl_SMPPProvider.system_id" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@system_type

Property Name	Value
Description:	The type of ESME that is communicating with the SMPP server at the SMSC. For example, an application like Cisco Unity Connection may be categorized as a "VMS" (voice mail system).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.system_type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (13 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.system_type." If "tbl_SMPPProvider.system_type" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TextName

Property Name	Value
Description:	The unique text name of the SMPP Provider that represents the service provider in Cisco Unity Connection applications and is used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.TextName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.TextName." If "tbl_SMPPProvider.TextName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@validity_period

Property Name	Value
Description:	The SMSC expiration time, after which the message should be discarded if not delivered to the destination.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SMPPProvider.validity_period
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (17 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SMPPProvider.validity_period." If "tbl_SMPPProvider.validity_period" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.286. csp_SmtpServerCreate

Creates an entry for an SMTP server that exists at this location.

Additional Information

DomainName and Port combined must be unique from all other entries in the table.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The human readable text name of the SMTP server to be used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Required	@DomainName	In	inherit	varchar (255 characters)	An internet-addressable SMTP domain name identifying the SMTP domain that this SMTP server services.
Required	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this SMTP server belongs. All Unity Connection SMTP servers belong to the LocationVMS. A Foreign Key to tbl_LocationVMS.ObjectId.
Required	@MailRootDirectory	In	inherit	nvarchar (255 characters)	The root directory for mail for the SMTP server.
Required	@Port	In	inherit	int (4 bytes)	The TCP/IP port number on which the SMTP server listens.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsDefault	In	inherit	smallint (2 bytes)	Specifies if this is the default smtp server for this location. There can only be one default at a time. If a smtp server is set to default value 1, all other servers must be set value 0.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	<p>A flag indicating whether this SMTP server is active or not.</p> <p>Values: 0: Not active. 1: Active</p>
Optional	@LimitConnections	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the number of simultaneous connections. This applies to both incoming and outgoing connections.</p> <p>Values: 0: No limit on number of connections. 1: The maximum number of connections is limited to the value contained in ?MaxNumberConnections.?</p>
Optional	@LimitMessageSize	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the size of an incoming message.</p> <p>Values: 0: No message size limit 1: Incoming message size is limited by the value contained in ?MaxMessageSize.?</p>
Optional	@LimitMessagesSession	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the number of incoming messages per SMTP session.</p> <p>Values: 0: No limit on the number of messages per SMTP session 1: The number of outgoing messages per SMTP session are limited by the value contained in ?MaxNumberMessagesSession</p>

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@LimitRecipients	In	inherit	smallint (2 bytes)	A flag indicating whether the SMTP sever shall limit the number of recipients for both incoming and outgoing messages. Values: 0: No limit on the number of recipients 1: The number of recipients for both incoming and outgoing messages is limited by the value contained in ?MaxNumberRecipients.?
Optional	@MaxMessageSizeKb	In	inherit	int (4 bytes)	The maximum size (in KBytes) of an incoming message. If a message exceeds this value, the message is rejected, and an NDR is sent to the sender.
Optional	@MaxNumberConnections	In	inherit	int (4 bytes)	The maximum number of simultaneous connections for both incoming and outgoing connections.
Optional	@MaxNumberMessagesSession	In	inherit	int (4 bytes)	The maximum number of incoming messages per SMTP session.
Optional	@MaxNumberRecipients	In	inherit	int (4 bytes)	The maximum number of recipients (i.e., addresses) for both incoming and outgoing messages. For an incoming message, if the number of recipients exceeds this value, the message is rejected. For an outgoing message, if the number of recipients exceeds this value, the message will be sent to the maximum number of recipients, and then another copy of the message is sent to the remaining recipients.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.

Exceptions

csp_SmtpServerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The human readable text name of the SMTP server to be used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.DisplayName." If "tbl_SmtpServer.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DomainName

Property Name	Value
Description:	An internet-addressable SMTP domain name identifying the SMTP domain that this SMTP server services.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.DomainName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.DomainName." If "tbl_SmtpServer.DomainName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsDefault

Property Name	Value
Description:	Specifies if this is the default smtp server for this location. There can only be one default at a time. If a smtp server is set to default value 1, all other servers must be set value 0.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.IsDefault
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.IsDefault." If "tbl_SmtpServer.IsDefault" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether this SMTP server is active or not. Values: 0: Not active. 1: Active
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.IsEnabled." If "tbl_SmtpServer.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LimitConnections

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the number of simultaneous connections. This applies to both incoming and outgoing connections. Values: 0: No limit on number of connections. 1: The maximum number of connections is limited to the value contained in ?MaxNumberConnections.?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitConnections
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitConnections." If "tbl_SmtpServer.LimitConnections" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitMessageSize

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the size of an incoming message. Values: 0: No message size limit 1: Incoming message size is limited by the value contained in ?MaxMessageSize.?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitMessageSize
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitMessageSize." If "tbl_SmtpServer.LimitMessageSize" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitMessagesSession

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the number of incoming messages per SMTP session. Values: 0: No limit on the number of messages per SMTP session 1: The number of outgoing messages per SMTP session are limited by the value contained in ?MaxNumberMessagesSession
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitMessagesSession
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitMessagesSession." If "tbl_SmtpServer.LimitMessagesSession" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitRecipients

Property Name	Value
Description:	A flag indicating whether the SMTP sever shall limit the number of recipients for both incoming and outgoing messages. Values: 0: No limit on the number of recipients 1: The number of recipients for both incoming and outgoing messages is limited by the value contained in ?MaxNumberRecipients.?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitRecipients." If "tbl_SmtpServer.LimitRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this SMTP server belongs. All Unity Connection SMTP servers belong to the LocationVMS. A Foreign Key to tbl_LocationVMS.ObjectId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LocationObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LocationObjectId." If "tbl_SmtpServer.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailRootDirectory

Property Name	Value
Description:	The root directory for mail for the SMTP server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MailRootDirectory
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MailRootDirectory." If "tbl_SmtpServer.MailRootDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMessageSizeKb

Property Name	Value
Description:	The maximum size (in KBytes) of an incoming message. If a message exceeds this value, the message is rejected, and an NDR is sent to the sender.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxMessageSizeKb
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxMessageSizeKb." If "tbl_SmtpServer.MaxMessageSizeKb" can be NULL, then explicit NULL is allowed.
Default Value:	10000
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberConnections

Property Name	Value
Description:	The maximum number of simultaneous connections for both incoming and outgoing connections.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberConnections
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberConnections." If "tbl_SmtpServer.MaxNumberConnections" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberMessagesSession

Property Name	Value
Description:	The maximum number of incoming messages per SMTP session.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberMessagesSession
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberMessagesSession." If "tbl_SmtpServer.MaxNumberMessagesSession" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberRecipients

Property Name	Value
Description:	The maximum number of recipients (i.e., addresses) for both incoming and outgoing messages. For an incoming message, if the number of recipients exceeds this value, the message is rejected. For an outgoing message, if the number of recipients exceeds this value, the message will be sent to the maximum number of recipients, and then another copy of the message is sent to the remaining recipients.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberRecipients." If "tbl_SmtpServer.MaxNumberRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.ObjectId." If "tbl_SmtpServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Port

Property Name	Value
Description:	The TCP/IP port number on which the SMTP server listens.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.Port
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.Port." If "tbl_SmtpServer.Port" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.287. csp_SmtpServerDelete

Deletes an SMTP server entry for this location.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsDefault	In	inherit	smallint (2 bytes)	Specifies if this is the default smtp server for this location. There can only be one default at a time. If a smtp server is set to default value 1, all other servers must be set value 0.

Exceptions

csp_SmtpServerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1147	EXCEPTION_CANNOT_REMOVE_DEFAULT	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.IsDefault." If "tbl_SmtpServer.IsDefault" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.ObjectId." If "tbl_SmtpServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.288. csp_SmtpServerModify

Modifies an entry for an SMTP server that exists at this location.

Additional Information

DomainName and Port combined must be unique from all other entries in the table.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The human readable text name of the SMTP server to be used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Optional	@DomainName	In	inherit	varchar (255 characters)	An internet-addressable SMTP domain name identifying the SMTP domain that this SMTP server services.
Optional	@IsDefault	In	inherit	smallint (2 bytes)	Specifies if this is the default smtp server for this location. There can only be one default at a time. If a smtp server is set to default value 1, all other servers must be set value 0.
Optional	@IsEnabled	In	ignore	smallint (2 bytes)	A flag indicating whether this SMTP server is active or not. Values: 0: Not active. 1: Active

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@LimitConnections	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the number of simultaneous connections. This applies to both incoming and outgoing connections.</p> <p>Values: 0: No limit on number of connections. 1: The maximum number of connections is limited to the value contained in ?MaxNumberConnections.?</p>
Optional	@LimitMessageSize	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the size of an incoming message.</p> <p>Values: 0: No message size limit 1: Incoming message size is limited by the value contained in ?MaxMessageSize.?</p>
Optional	@LimitMessagesSession	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP server shall limit the number of incoming messages per SMTP session.</p> <p>Values: 0: No limit on the number of messages per SMTP session 1: The number of outgoing messages per SMTP session are limited by the value contained in ?MaxNumberMessagesSession</p>
Optional	@LimitRecipients	In	inherit	smallint (2 bytes)	<p>A flag indicating whether the SMTP sever shall limit the number of recipients for both incoming and outgoing messages.</p> <p>Values: 0: No limit on the number of recipients 1: The number of recipients for both incoming and outgoing messages is limited by the value contained in ?MaxNumberRecipients.?</p>
Optional	@LocationObjectId	In	inherit	char (36 characters)	<p>The unique identifier of the LocationVMS object to which this SMTP server belongs. All Unity Connection SMTP servers belong to the LocationVMS. A Foreign Key to tbl_LocationVMS.ObjectId.</p>

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MailRootDirectory	In	inherit	nvarchar (255 characters)	The root directory for mail for the SMTP server.
Optional	@MaxMessageSizeKb	In	inherit	int (4 bytes)	The maximum size (in KBytes) of an incoming message. If a message exceeds this value, the message is rejected, and an NDR is sent to the sender.
Optional	@MaxNumberConnections	In	inherit	int (4 bytes)	The maximum number of simultaneous connections for both incoming and outgoing connections.
Optional	@MaxNumberMessagesSession	In	inherit	int (4 bytes)	The maximum number of incoming messages per SMTP session.
Optional	@MaxNumberRecipients	In	inherit	int (4 bytes)	The maximum number of recipients (i.e., addresses) for both incoming and outgoing messages. For an incoming message, if the number of recipients exceeds this value, the message is rejected. For an outgoing message, if the number of recipients exceeds this value, the message will be sent to the maximum number of recipients, and then another copy of the message is sent to the remaining recipients.
Optional	@Port	In	inherit	int (4 bytes)	The TCP/IP port number on which the SMTP server listens.

Exceptions

csp_SmtpServerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1147	EXCEPTION_CANNOT_REMOVE_DEFAULT

Property Name	Value
Reference Table/Column:	tbl_SmtpServer.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.DisplayName." If "tbl_SmtpServer.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DomainName

Property Name	Value
Description:	An internet-addressable SMTP domain name identifying the SMTP domain that this SMTP server services.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.DomainName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.DomainName." If "tbl_SmtpServer.DomainName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsDefault

Property Name	Value
Description:	Specifies if this is the default smtp server for this location. There can only be one default at a time. If a smtp server is set to default value 1, all other servers must be set value 0.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.IsDefault

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.IsDefault." If "tbl_SmtpServer.IsDefault" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether this SMTP server is active or not. Values: 0: Not active. 1: Active
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LimitConnections

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the number of simultaneous connections. This applies to both incoming and outgoing connections. Values: 0: No limit on number of connections. 1: The maximum number of connections is limited to the value contained in ?MaxNumberConnections.?
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitConnections
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitConnections." If "tbl_SmtpServer.LimitConnections" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitMessageSize

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the size of an incoming message. Values: 0: No message size limit 1: Incoming message size is limited by the value contained in ?MaxMessageSize.?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitMessageSize
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitMessageSize." If "tbl_SmtpServer.LimitMessageSize" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitMessagesSession

Property Name	Value
Description:	A flag indicating whether the SMTP server shall limit the number of incoming messages per SMTP session. Values: 0: No limit on the number of messages per SMTP session 1: The number of outgoing messages per SMTP session are limited by the value contained in ?MaxNumberMessagesSession
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitMessagesSession
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitMessagesSession." If "tbl_SmtpServer.LimitMessagesSession" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LimitRecipients

Property Name	Value
Description:	A flag indicating whether the SMTP sever shall limit the number of recipients for both incoming and outgoing messages. Values: 0: No limit on the number of recipients 1: The number of recipients for both incoming and outgoing messages is limited by the value contained in ?MaxNumberRecipients.?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LimitRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LimitRecipients." If "tbl_SmtpServer.LimitRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this SMTP server belongs. All Unity Connection SMTP servers belong to the LocationVMS. A Foreign Key to tbl_LocationVMS.ObjectId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.LocationObjectId." If "tbl_SmtpServer.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailRootDirectory

Property Name	Value
Description:	The root directory for mail for the SMTP server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MailRootDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MailRootDirectory." If "tbl_SmtpServer.MailRootDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMessageSizeKb

Property Name	Value
Description:	The maximum size (in KBytes) of an incoming message. If a message exceeds this value, the message is rejected, and an NDR is sent to the sender.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxMessageSizeKb
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxMessageSizeKb." If "tbl_SmtpServer.MaxMessageSizeKb" can be NULL, then explicit NULL is allowed.
Default Value:	10000
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberConnections

Property Name	Value
Description:	The maximum number of simultaneous connections for both incoming and outgoing connections.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberConnections
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberConnections." If "tbl_SmtpServer.MaxNumberConnections" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberMessagesSession

Property Name	Value
Description:	The maximum number of incoming messages per SMTP session.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberMessagesSession
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberMessagesSession." If "tbl_SmtpServer.MaxNumberMessagesSession" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@MaxNumberRecipients

Property Name	Value
Description:	The maximum number of recipients (i.e., addresses) for both incoming and outgoing messages. For an incoming message, if the number of recipients exceeds this value, the message is rejected. For an outgoing message, if the number of recipients exceeds this value, the message will be sent to the maximum number of recipients, and then another copy of the message is sent to the remaining recipients.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.MaxNumberRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.MaxNumberRecipients." If "tbl_SmtpServer.MaxNumberRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a SMTPServer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.ObjectId." If "tbl_SmtpServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Port

Property Name	Value
Description:	The TCP/IP port number on which the SMTP server listens.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.Port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.Port." If "tbl_SmtpServer.Port" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.289. csp_StreamFileDelete

Deletes a StreamFile object from tbl_StreamFile as specified by the @ObjectId parameter. The delete doesn't actually remove the row. It simply marks it for delete by setting the TimeDeleted column to the current date/time. The SysAgent service deletes the actual row once the file is deleted from the file system.

Additional Information

The delete doesn't actually remove the column. It simply marks it for delete and the SysAgent service deletes the actual row once the file is deleted from the file system. See csp_private_StreamFileDelete.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a StreamFile object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_StreamFileDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified StreamFile object was not found. The names of the object (Stream file), table (tbl_StreamFile), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a StreamFile object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.ObjectId." If "tbl_StreamFile.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.290. csp_StreamFileModify

Activates an existing StreamFile object in tbl_StreamFile that was allocated using csp_AllocateVoiceFile. This procedure sets the value of the TimeDeleted column to NULL. The @FileName parameter identifies the StreamFile object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FileName	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_StreamFileModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @FileName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified StreamFile object was not found. The names of the object (Stream file), table (tbl_StreamFile), and column (FileName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FileName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.291. csp_SubscriberCreate

Creates a new voice mail user (subscriber).

Additional Information

The parameters @Alias and @DtmfAccessId must be provided. Either the @TemplateAlias or @TemplateObjectId must be provided because a user must be created from a template.

To create a user without voice mail, use csp_UserCreate instead.

This procedure performs license checks on both the maximum number of licensed subscribers and allowed features. If a license violation is detected and exception is returned and the subscriber is not created. The parameter @NoLicenseCheck can be used to override the license checks, if desired.

In addition to creating a new subscription object in tbl_UserSubscriber, this procedure also creates several subscriber related objects:

- * A User object and its sub-objects by calling csp_UserCreate. See csp_UserCreate for more information.
- * An exit action by inserting a new row into tbl_CallAction.
- * A DtmfAccessId object by inserting a new row into tbl_DtmfAccessId.
- * A primary call handler by inserting a new row into tbl_Callhandler. The DisplayName of the call handler is set to the Alias of the subscriber.
- * A schedule for syncing with a corporate directory by call csp_ScheduleCreate.
- * A NotificationMwi object by call csp_NotificationMwiCreate.
- * A set of notification devices by inserting new rows into tbl_NotificationDevice, tbl_NotificationDeviceConversation, tbl_NotificationDevicePager, tbl_NotificationDeviceSMS, and tbl_NotificationDeviceSMTP.
- * A set of notification rules, criteria and events for each notification device.
- * A mailbox is configured for the subscriber by call csp_MailboxModify.
- * The subscriber is added to the "All Subscribers" distribution list by calling csp_DistributionListMemberCreate.
- * If the parameter @VoiceName contains a value other than NULL, a StreamFile object is created with the value of tbl_StreamFile.FileName = @VoiceName. If this value is specified, it must be a filename that was allocated using csp_AllocateVoiceFile. If not specified, a filename will be generated.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Required	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AddressAfterRecord	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Optional	@AddressMode	In	inherit	smallint (2 bytes)	The default method the subscriber will use to address messages to other subscribers.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AnnounceUpcoming Meetings	In	inherit	int (4 bytes)	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Optional	@AssistantRowsPerPage	In	inherit	int (4 bytes)	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CallAnswerTimeout	In	inherit	int (4 bytes)	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Optional	@CcmId	In	inherit	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Optional	@CcmIdType	In	inherit	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Optional	@ClockMode	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@ConfirmationConfidenceThreshold	In	inherit	int (4 bytes)	Voice Recognition Confirmation Confidence Threshold
Optional	@ConfirmDeleteDeletedMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.
Optional	@ConfirmDeleteMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Optional	@ConfirmDeleteMultipleMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Optional	@ConversationTui	In	inherit	nvarchar (64 characters)	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Optional	@ConversationVui	In	inherit	nvarchar (64 characters)	The VUI conversation assigned to the subscriber.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@DelayAfterGreeting	In	inherit	int (4 bytes)	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Optional	@DeletedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.
Optional	@EmployeeId	In	inherit	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Optional	@EnableMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the message locator feature is enabled for the subscriber.
Optional	@EnablePersonalRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Optional	@EnableTts	In	inherit	smallint (2 bytes)	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Optional	@EnableVisualMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Optional	@EnAltGreetDontRingPhone	In	inherit	smallint (2 bytes)	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EnAltGreetPreventMsg	In	inherit	smallint (2 bytes)	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventSkip	In	inherit	smallint (2 bytes)	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Optional	@EncryptPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Optional	@EnhancedSecurityAlias	In	inherit	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Optional	@Exit_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@FirstDigitTimeout	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Optional	@ForcedAuthorizationCode	In	inherit	varchar (40 characters)	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Optional	@GreetByName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Optional	@InboxAutoRefresh	In	inherit	int (4 bytes)	The rate (in minutes) at which Unity Inbox performs a refresh.
Optional	@InboxAutoResolveMessageRecipients	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Optional	@InboxMessagesPerPage	In	inherit	int (4 bytes)	The number of messages Unity Inbox displays in a page.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Initials	In	inherit	nvarchar (12 characters)	The initial letters of some or all of the names of this user.
Optional	@InterdigitDelay	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Optional	@IsClockMode24Hour	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@IsSetForVmEnrollment	In	ignore	smallint (2 bytes)	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Optional	@IsVmEnrolled	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Optional	@JumpToMessagesOnLogin	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxId	Out	inherit	nvarchar (110 characters)	If @MailboxStoreObjectId is specified, the ID of the new mailbox is returned in this parameter.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	Specify this value to have a mailbox created and assigned to this user account.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Optional	@MessageAgingPolicy ObjectId	In	inherit	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Optional	@MessageLocatorSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Optional	@MessageTypeMenu	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Optional	@NewMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort new messages.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@NewMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@NoLicenseCheck	In	explicit-with-default	smallint (2 bytes)	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Optional	@NotificationType	In	inherit	smallint (2 bytes)	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Optional	@ObjectId	Out	inherit	char (36 characters)	The ObjectId of the user to make a Unity Subscriber. If NULL, contains the ObjectId of the newly created object upon returning.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PcaAddressBookRowsPerPage	In	inherit	int (4 bytes)	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Optional	@PcaHomePage	In	inherit	lvarchar (256 characters)	The Home Page is the first page that is displayed after logging in to the PCA.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@PromptSpeed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Optional	@PromptVolume	In	inherit	int (4 bytes)	The volume level for playback of system prompts.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ReceiveQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@RecordUnknownCallerName	In	inherit	smallint (2 bytes)	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.
Optional	@RepeatMenu	In	inherit	int (4 bytes)	The number of times to repeat a menu in TUI.
Optional	@RingPrimaryPhoneFirst	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SavedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort saved messages.
Optional	@SavedMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@SayAltGreetWarning	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Optional	@SayAni	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Optional	@SayCopiedNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SayDistributionList	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Optional	@SayMsgNumber	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Optional	@SaySender	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Optional	@SaySenderExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Optional	@SayTimestampAfter	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Optional	@SayTimestampBefore	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Optional	@SayTotalNew	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Optional	@SayTotalNewEmail	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Optional	@SayTotalNewFax	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Optional	@SayTotalNewVoice	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Optional	@SayTotalReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SayTotalSaved	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Optional	@SendBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber may send broadcast messages.
Optional	@SendConv	In	inherit	smallint (2 bytes)	Type of send conversation to use - standard or streamlined.
Optional	@SendQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) send limit.
Optional	@SendReadReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Optional	@SkipPasswordForKnownDevice	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Optional	@SpeechCompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechConfidenceThreshold	In	inherit	int (4 bytes)	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Optional	@SpeechIncompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechSensitivity	In	inherit	int (4 bytes)	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechSpeedVsAccuracy	In	inherit	int (4 bytes)	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Optional	@Speed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TemplateAlias	In	ignore	nvarchar (64 characters)	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Optional	@TemplateObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Optional	@TimeLastCall	In	inherit	datetime (8 bytes)	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Title	In	inherit	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@UseBriefPrompts	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@UseVui	In	inherit	smallint (2 bytes)	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for the subscriber's recorded voice name.
Optional	@VoiceNameRequired	In	inherit	smallint (2 bytes)	A flag indicating whether a recorded voice name is required for this subscriber.
Optional	@Volume	In	inherit	int (4 bytes)	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Optional	@WarningQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) warning limit.
Optional	@XferString	In	inherit	nvarchar (40 characters)	The alternate transfer option extension for the primary call handler for the subscriber.

Exceptions

csp_SubscriberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber template object as specified by @ObjectId was not found. The names of the object (template), parameter (@TemplateObjectId), view (vw_SubscriberTemplate), and columns (Alias, ObjectId) are included with the exception message.
1025	EXCEPTION_LICENSE_VIOLATION	The number of subscribers would exceed the licensed maximum.
1026	EXCEPTION_LICENSE_VIOLATION_FEATURE	The number of subscribers exceeds the allowed number for a licensed feature. The name of the feature is included with the message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AddressAfterRecord

Property Name	Value
Description:	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressAfterRecord
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressAfterRecord." If "tbl_UserSubscriber.AddressAfterRecord" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AddressMode

Property Name	Value
Description:	The default method the subscriber will use to address messages to other subscribers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressMode." If "tbl_UserSubscriber.AddressMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltFirstName." If "tbl_User.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltLastName." If "tbl_User.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AnnounceUpcomingMeetings

Property Name	Value
Description:	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.AnnounceUpcomingMeetings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AnnounceUpcomingMeetings." If "tbl_UserSubscriber.AnnounceUpcomingMeetings" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@AssistantRowsPerPage

Property Name	Value
Description:	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AssistantRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AssistantRowsPerPage." If "tbl_UserSubscriber.AssistantRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallAnswerTimeout

Property Name	Value
Description:	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.CallAnswerTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.CallAnswerTimeout." If "tbl_UserSubscriber.CallAnswerTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CcmId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmId." If "tbl_User.CcmId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmIdType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmIdType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CcmIdType
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmIdType." If "tbl_User.CcmIdType" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClientMatterCode." If "tbl_UserSubscriber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClockMode

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClockMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ClockMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClockMode." If "tbl_UserSubscriber.ClockMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmationConfidenceThreshold

Property Name	Value
Description:	Voice Recognition Confirmation Confidence Threshold
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmationConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmationConfidenceThreshold." If "tbl_UserSubscriber.ConfirmationConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteDeletedMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteDeletedMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteDeletedMessage." If "tbl_UserSubscriber.ConfirmDeleteDeletedMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMessage." If "tbl_UserSubscriber.ConfirmDeleteMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMultipleMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMultipleMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMultipleMessages." If "tbl_UserSubscriber.ConfirmDeleteMultipleMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ConversationTui

Property Name	Value
Description:	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationTui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationTui." If "tbl_UserSubscriber.ConversationTui" can be NULL, then explicit NULL is allowed.
Default Value:	SubMenu
Direction:	In
Update Column Value From Parameter:	True

@ConversationVui

Property Name	Value
Description:	The VUI conversation assigned to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationVui." If "tbl_UserSubscriber.ConversationVui" can be NULL, then explicit NULL is allowed.
Default Value:	VuiStart
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DelayAfterGreeting

Property Name	Value
Description:	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.DelayAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DelayAfterGreeting." If "tbl_UserSubscriber.DelayAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DeletedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.DeletedMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DeletedMessageSortOrder." If "tbl_UserSubscriber.DeletedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmailAddress." If "tbl_User.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmployeeId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmployeeId." If "tbl_User.EmployeeId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@EnableMessageLocator

Property Name	Value
Description:	A flag indicating whether the message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableMessageLocator." If "tbl_UserSubscriber.EnableMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnablePersonalRules

Property Name	Value
Description:	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnablePersonalRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnablePersonalRules." If "tbl_UserSubscriber.EnablePersonalRules" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableTts

Property Name	Value
Description:	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableTts." If "tbl_UserSubscriber.EnableTts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableVisualMessageLocator

Property Name	Value
Description:	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableVisualMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableVisualMessageLocator." If "tbl_UserSubscriber.EnableVisualMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetDontRingPhone

Property Name	Value
Description:	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetDontRingPhone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetDontRingPhone." If "tbl_UserSubscriber.EnAltGreetDontRingPhone" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventMsg

Property Name	Value
Description:	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventMsg." If "tbl_UserSubscriber.EnAltGreetPreventMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventSkip

Property Name	Value
Description:	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventSkip
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventSkip." If "tbl_UserSubscriber.EnAltGreetPreventSkip" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptPrivateMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EncryptPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EncryptPrivateMessages." If "tbl_UserSubscriber.EncryptPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EnhancedSecurityAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (50 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EnhancedSecurityAlias." If "tbl_User.EnhancedSecurityAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstDigitTimeout

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.FirstDigitTimeout

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.FirstDigitTimeout." If "tbl_UserSubscriber.FirstDigitTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.FirstName." If "tbl_User.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ForcedAuthorizationCode

Property Name	Value
Description:	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)

Property Name	Value
Custom Type:	ForcedAuthorizationCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ForcedAuthorizationCode." If "tbl_UserSubscriber.ForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@GreetByName

Property Name	Value
Description:	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.GreetByName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.GreetByName." If "tbl_UserSubscriber.GreetByName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoRefresh

Property Name	Value
Description:	The rate (in minutes) at which Unity Inbox performs a refresh.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoRefresh
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoRefresh." If "tbl_UserSubscriber.InboxAutoRefresh" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoResolveMessageRecipients

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoResolveMessageRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoResolveMessageRecipients." If "tbl_UserSubscriber.InboxAutoResolveMessageRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxMessagesPerPage

Property Name	Value
Description:	The number of messages Unity Inbox displays in a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxMessagesPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxMessagesPerPage." If "tbl_UserSubscriber.InboxMessagesPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	20
Direction:	In
Update Column Value From Parameter:	True

@Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Initials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Initials." If "tbl_User.Initials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InterdigitDelay

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InterdigitDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InterdigitDelay." If "tbl_UserSubscriber.InterdigitDelay" can be NULL, then explicit NULL is allowed.
Default Value:	3000

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@IsClockMode24Hour

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsClockMode24Hour
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsClockMode24Hour." If "tbl_UserSubscriber.IsClockMode24Hour" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsSetForVmEnrollment

Property Name	Value
Description:	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsVmEnrolled

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsVmEnrolled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsVmEnrolled." If "tbl_UserSubscriber.IsVmEnrolled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@JumpToMessagesOnLogin

Property Name	Value
Description:	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.JumpToMessagesOnLogin
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.JumpToMessagesOnLogin." If "tbl_UserSubscriber.JumpToMessagesOnLogin" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.LastName." If "tbl_User.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ListInDirectory." If "tbl_UserSubscriber.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.LocationObjectId." If "tbl_User.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	If @MailboxStoreObjectId is specified, the ID of the new mailbox is returned in this parameter.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	Specify this value to have a mailbox created and assigned to this user account.
Notes:	This will cause a cross-database call to be made to the UnityMbx database to create a mailbox and assign it to this user account.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character ' ' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MediaSwitchObjectId." If "tbl_UserSubscriber.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MessageAgingPolicyObjectId." If "tbl_UserTemplate.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageLocatorSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageLocatorSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageLocatorSortOrder." If "tbl_UserSubscriber.MessageLocatorSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageTypeMenu

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageTypeMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageTypeMenu." If "tbl_UserSubscriber.MessageTypeMenu" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NewMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort new messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageSortOrder." If "tbl_UserSubscriber.NewMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NewMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageStackOrder." If "tbl_UserSubscriber.NewMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Notes:	The default is 0 so that license check do occur - this is normally the desired behavior, since otherwise license violations will be caught later. The license checks in this procedure are "soft checks", designed to alert administrators but not to be relied upon for enforcement. It may be desirable at times to override the checks, such as when licenses are going to be purchased in the very near future but the subscriber additions need to be made immediately.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.NotificationType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NotificationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.NotificationType." If "tbl_UserTemplate.NotificationType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The ObjectId of the user to make a Unity Subscriber. If NULL, contains the ObjectId of the newly created object upon returning.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PcaAddressBookRowsPerPage

Property Name	Value
Description:	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaAddressBookRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaAddressBookRowsPerPage." If "tbl_UserSubscriber.PcaAddressBookRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@PcaHomePage

Property Name	Value
Description:	The Home Page is the first page that is displayed after logging in to the PCA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaHomePage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaHomePage." If "tbl_UserSubscriber.PcaHomePage" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptSpeed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptSpeed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptSpeed." If "tbl_UserSubscriber.PromptSpeed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@PromptVolume

Property Name	Value
Description:	The volume level for playback of system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptVolume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptVolume." If "tbl_UserSubscriber.PromptVolume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ReceiveQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ReceiveQuota." If "tbl_UserTemplate.ReceiveQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	False

@RecordUnknownCallerName

Property Name	Value
Description:	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RecordUnknownCallerName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RecordUnknownCallerName." If "tbl_UserSubscriber.RecordUnknownCallerName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RepeatMenu

Property Name	Value
Description:	The number of times to repeat a menu in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RepeatMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RepeatMenu." If "tbl_UserSubscriber.RepeatMenu" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RingPrimaryPhoneFirst

Property Name	Value
Description:	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RingPrimaryPhoneFirst
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RingPrimaryPhoneFirst." If "tbl_UserSubscriber.RingPrimaryPhoneFirst" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRTToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRTToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRTToSender." If "tbl_User.RouteNDRTToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort saved messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageSortOrder." If "tbl_UserSubscriber.SavedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageStackOrder." If "tbl_UserSubscriber.SavedMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@SayAltGreetWarning

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAltGreetWarning
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAltGreetWarning." If "tbl_UserSubscriber.SayAltGreetWarning" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayAni

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAni
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAni." If "tbl_UserSubscriber.SayAni" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayCopiedNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayCopiedNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayCopiedNames." If "tbl_UserSubscriber.SayCopiedNames" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayDistributionList

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayDistributionList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayDistributionList." If "tbl_UserSubscriber.SayDistributionList" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayMsgNumber

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayMsgNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayMsgNumber." If "tbl_UserSubscriber.SayMsgNumber" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySender

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySender." If "tbl_UserSubscriber.SaySender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySenderExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.SaySenderExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySenderExtension." If "tbl_UserSubscriber.SaySenderExtension" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampAfter

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampAfter
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampAfter." If "tbl_UserSubscriber.SayTimestampAfter" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampBefore

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampBefore

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampBefore." If "tbl_UserSubscriber.SayTimestampBefore" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNew

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNew
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNew." If "tbl_UserSubscriber.SayTotalNew" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewEmail

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewEmail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewEmail." If "tbl_UserSubscriber.SayTotalNewEmail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewFax

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewFax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewFax." If "tbl_UserSubscriber.SayTotalNewFax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewVoice

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewVoice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewVoice." If "tbl_UserSubscriber.SayTotalNewVoice" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTotalReceipts

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalReceipts." If "tbl_UserSubscriber.SayTotalReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalSaved

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalSaved
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalSaved." If "tbl_UserSubscriber.SayTotalSaved" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber may send broadcast messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendBroadcastMsg." If "tbl_UserSubscriber.SendBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendConv

Property Name	Value
Description:	Type of send conversation to use - standard or streamlined.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendConv
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SendConverationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendConv." If "tbl_UserSubscriber.SendConv" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendQuota." If "tbl_UserTemplate.SendQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	False

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendReadReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendReadReceipts." If "tbl_UserTemplate.SendReadReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	False

@SkipPasswordForKnownDevice

Property Name	Value
Description:	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SkipPasswordForKnownDevice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SkipPasswordForKnownDevice." If "tbl_UserSubscriber.SkipPasswordForKnownDevice" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SpeechCompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechCompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechCompleteTimeout." If "tbl_UserSubscriber.SpeechCompleteTimeout" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@SpeechConfidenceThreshold

Property Name	Value
Description:	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechConfidenceThreshold." If "tbl_UserSubscriber.SpeechConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	45
Direction:	In
Update Column Value From Parameter:	True

@SpeechIncompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechIncompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechIncompleteTimeout." If "tbl_UserSubscriber.SpeechIncompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	750
Direction:	In
Update Column Value From Parameter:	True

@SpeechSensitivity

Property Name	Value
Description:	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSensitivity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSensitivity." If "tbl_UserSubscriber.SpeechSensitivity" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@SpeechSpeedVsAccuracy

Property Name	Value
Description:	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSpeedVsAccuracy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSpeedVsAccuracy." If "tbl_UserSubscriber.SpeechSpeedVsAccuracy" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Speed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Speed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Speed." If "tbl_UserSubscriber.Speed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateAlias

Property Name	Value
Description:	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TemplateObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TimeLastCall

Property Name	Value
Description:	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.TimeLastCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.TimeLastCall." If "tbl_UserSubscriber.TimeLastCall" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Title
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Title." If "tbl_User.Title" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UpdateBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UpdateBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UpdateBroadcastMsg." If "tbl_UserSubscriber.UpdateBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseBriefPrompts

Property Name	Value
Description:	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseBriefPrompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseBriefPrompts." If "tbl_UserSubscriber.UseBriefPrompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseVui

Property Name	Value
Description:	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseVui." If "tbl_UserSubscriber.UseVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for the subscriber's recorded voice name.
Notes:	If this value is specified, it must be a filename that was allocated using csp_AllocateVoiceFile. If not specified, a filename will be generated.
Business Rules:	
Developer Notes:	See csp_AllocateVoiceFile for more information.
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceNameRequired

Property Name	Value
Description:	A flag indicating whether a recorded voice name is required for this subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.VoiceNameRequired
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.VoiceNameRequired." If "tbl_UserSubscriber.VoiceNameRequired" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Volume

Property Name	Value
Description:	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Volume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Volume." If "tbl_UserSubscriber.Volume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.WarningQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.WarningQuota." If "tbl_UserTemplate.WarningQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	False

@XferString

Property Name	Value
Description:	The alternate transfer option extension for the primary call handler for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.XferString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.XferString." If "tbl_UserSubscriber.XferString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

6.292. csp_SubscriberDelete

Deletes a voice mail user (subscriber).

Additional Information

This procedure calls csp_UserDelete, which removes all subscriber related objects including removing this subscriber from tbl_UserSubscriber. See csp_UserDelete for more information.

To delete a user without voice mail, use csp_UserDelete.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber to delete.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ReplacementSubscriberObjectId	In	ignore	char (36 characters)	Any references to subscriber being deleted will be replaced with this subscriber.

Exceptions

csp_SubscriberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @ObjectId was not found. The names of the object (subscriber), parameter (@ObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber to delete.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ObjectId." If "tbl_UserSubscriber.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReplacementSubscriberObjectId

Property Name	Value
Description:	Any references to subscriber being deleted will be replaced with this subscriber.
Notes:	This is an optional parameter. By default, no replacements will be made and the delete will fail if there are any references.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.293. csp_SubscriberExternalServiceMapCreate

Creates a mapping of a user with an external service such as IMAP, WebDav or MPE.

Additional Information

To create a mapping for a user with an external service, provide the @ExternalServiceObjectId, @UserId and @SubscriberObjectId parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ExternalServiceObjectId	In	inherit	char (36 characters)	The unique identifier of the external service object to which the user is mapped.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the User account object that is mapped to the external service.
Required	@UserId	In	inherit	nvarchar (110 characters)	The unique text name (e.g., logon name) used by the User to logon to the service.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@LoginType	In	inherit	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it).
Optional	@UserPassword	In	inherit	varchar (254 characters)	The user password for logon to the external service.
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for accessing user's calendar and contact information on the external service.

Exceptions

csp_SubscriberExternalServiceMapCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ExternalServiceObjectId, @UserId, @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The ExternalServiceObjectId for the specified MailboxStore was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ExternalServiceObjectId

Property Name	Value
Description:	The unique identifier of the external service object to which the user is mapped.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it).
Notes:	Applies only to MPE external service currently. Default is to use the user alias.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxLoginType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxLoginType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxLoginType." If "tbl_MailboxMap.MailboxLoginType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the User account object that is mapped to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.UserObjectId." If "tbl_MailboxMap.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserId

Property Name	Value
Description:	The unique text name (e.g., logon name) used by the User to logon to the service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserPassword

Property Name	Value
Description:	The user password for logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxPassword." If "tbl_MailboxMap.MailboxPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@WebdavUrl

Property Name	Value
Description:	Relative URL for accessing user's calendar and contact information on the external service.
Notes:	This is usually a url comprised of the UserId, but that is not always the case, so it is in a separate column.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.294. csp_SubscriberExternalServiceMapDelete

Deletes a specified mapping of an external service with a user.

Additional Information

The identifier of the external service and user logon name (UserId) must be provided via the input parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ExternalServiceObjectId	In	inherit	char (36 characters)	The unique identifier of the external service object to which the user is mapped.
Required	@UserId	In	inherit	nvarchar (110 characters)	The unique text name (e.g., logon name) used by the User to logon to the service.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_SubscriberExternalServiceMapDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserId and @ExternalServiceObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The UserId for the specified ExternalService was not found. The names of the object (Mailbox map), table (tbl_MailboxMap), and columns (MailboxStoreObjectId and MailboxId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ExternalServiceObjectId

Property Name	Value
Description:	The unique identifier of the external service object to which the user is mapped.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserId

Property Name	Value
Description:	The unique text name (e.g., logon name) used by the User to logon to the service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.295. csp_SubscriberExternalServiceMapModify

Updates the attributes of a specified instance of a SubscriberExternalServiceMap object based on the values passed in via the parameters.

Additional Information

The identifier of the MailboxStore, User and Mailbox must be provided via the input parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ExternalServiceObjectId	In	inherit	char (36 characters)	The unique identifier of the external service object to which the user is mapped.
Required	@UserId	In	inherit	nvarchar (110 characters)	The unique text name (e.g., logon name) used by the User to logon to the service.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@LastGuiAccessTime	In	inherit	datetime (8 bytes)	The last time the user accessed the external service through the GUI (e.g., CPCA, IMAP client).
Optional	@LastTuiAccessTime	In	inherit	datetime (8 bytes)	The last time the user accessed the external service through the TUI.
Optional	@LoginType	In	inherit	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it).
Optional	@UserPassword	In	inherit	varchar (254 characters)	The user password for logon to the external service.
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for accessing user's calendar and contact information on the external service.

Exceptions

csp_SubscriberExternalServiceMapModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserId and @ExternalServiceObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The UserId for the specified ExternalService was not found. The names of the object (Mailbox map), table (tbl_MailboxMap), and columns (MailboxStoreObjectId and MailboxId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ExternalServiceObjectId

Property Name	Value
Description:	The unique identifier of the external service object to which the user is mapped.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LastGuiAccessTime

Property Name	Value
Description:	The last time the user accessed the external service through the GUI (e.g., CPCA, IMAP client).
Notes:	A NULL value indicates the external service has never been access via the GUI. Timestamp stored in GMT/UTC.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.LastGuiAccessTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.LastGuiAccessTime." If "tbl_MailboxMap.LastGuiAccessTime" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LastTuiAccessTime

Property Name	Value
Description:	The last time the user accessed the external service through the TUI.
Notes:	A NULL value indicates the external service has never been access via the TUI. Timestamp stored in GMT/UTC.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.LastTuiAccessTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.LastTuiAccessTime." If "tbl_MailboxMap.LastTuiAccessTime" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it).
Notes:	Applies only to MPE external service currently. Default is to use the user alias.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxLoginType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxLoginType

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxLoginType." If "tbl_MailboxMap.MailboxLoginType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UserId

Property Name	Value
Description:	The unique text name (e.g., logon name) used by the User to logon to the service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UserPassword

Property Name	Value
Description:	The user password for logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxPassword." If "tbl_MailboxMap.MailboxPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@WebdavUrl

Property Name	Value
Description:	Relative URL for accessing user's calendar and contact information on the external service.
Notes:	This is usually a url comprised of the UserId, but that is not always the case, so it is in a separate column.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.296. csp_SubscriberModify

Updates the attributes of a voice mail user (subscriber) based on the values passed in.

Additional Information

In addition to updating the properties of the specified UserSubscriber object in tbl_UserSubscriber, associate DtmfAccessId in tbl_DtmfAccessId, and associated CallAction object in tbl_CallAction, this procedure calls csp_UserModify to update all subscriber related objects including tbl_User. See csp_UserModify for more information.

To modify a user that does not have voice mail, use csp_UserModify. csp_UserModify may be used to modify voice mail users as well, but not the voice mail specific attributes.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the subscriber to modify.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@AddressAfterRecord	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Optional	@AddressMode	In	inherit	smallint (2 bytes)	The default method the subscriber will use to address messages to other subscribers.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AnnounceUpcomingMeetings	In	inherit	int (4 bytes)	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Optional	@AssistantRowsPerPage	In	inherit	int (4 bytes)	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CallAnswerTimeout	In	inherit	int (4 bytes)	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Optional	@CcmId	In	inherit	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Optional	@CcmIdType	In	inherit	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Optional	@ClockMode	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@ConfirmationConfidenceThreshold	In	inherit	int (4 bytes)	Voice Recognition Confirmation Confidence Threshold

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ConfirmDeleteDeletedMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.
Optional	@ConfirmDeleteMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Optional	@ConfirmDeleteMultipleMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Optional	@ConversationTui	In	inherit	nvarchar (64 characters)	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Optional	@ConversationVui	In	inherit	nvarchar (64 characters)	The VUI conversation assigned to the subscriber.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@DelayAfterGreeting	In	inherit	int (4 bytes)	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Optional	@DeletedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	ignore	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.
Optional	@EmployeeId	In	inherit	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Optional	@EnableMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the message locator feature is enabled for the subscriber.
Optional	@EnablePersonalRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Optional	@EnableTts	In	inherit	smallint (2 bytes)	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Optional	@EnableVisualMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Optional	@EnAltGreetDontRingPhone	In	inherit	smallint (2 bytes)	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventMsg	In	inherit	smallint (2 bytes)	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventSkip	In	inherit	smallint (2 bytes)	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Optional	@EncryptPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Optional	@EnhancedSecurityAlias	In	inherit	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Exit_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@ExitCallActionObjectId	In	inherit	char (36 characters)	The unique identifier of the CallAction object that is taken when a caller exits the subscriber conversation by pressing the * key or timing out.
Optional	@FirstDigitTimeout	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Optional	@ForcedAuthorizationCode	In	inherit	varchar (40 characters)	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Optional	@GreetByName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Optional	@InboxAutoRefresh	In	inherit	int (4 bytes)	The rate (in minutes) at which Unity Inbox performs a refresh.
Optional	@InboxAutoResolveMessageRecipients	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Optional	@InboxMessagesPerPage	In	inherit	int (4 bytes)	The number of messages Unity Inbox displays in a page.
Optional	@Initials	In	inherit	nvarchar (12 characters)	The initial letters of some or all of the names of this user.
Optional	@InterdigitDelay	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Optional	@IsClockMode24Hour	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsSetForVmEnrollment	In	ignore	smallint (2 bytes)	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Optional	@IsVmEnrolled	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Optional	@JumpToMessagesOnLogin	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtpAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtpAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@MediaSwitchId	In	inherit	char (36 characters)	** obsolete -please use MediaSwitchObjectId

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Optional	@MessageLocatorSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Optional	@MessageTypeMenu	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Optional	@NewMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort new messages.
Optional	@NewMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "new" messages: * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@NoLicenseCheck	In	explicit	smallint (2 bytes)	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PcaAddressBookRowsPerPage	In	inherit	int (4 bytes)	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Optional	@PcaHomePage	In	inherit	lvarchar (256 characters)	The Home Page is the first page that is displayed after logging in to the PCA.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@PromptSpeed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Optional	@PromptVolume	In	inherit	int (4 bytes)	The volume level for playback of system prompts.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@RecordUnknownCallerName	In	inherit	smallint (2 bytes)	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.
Optional	@RepeatMenu	In	inherit	int (4 bytes)	The number of times to repeat a menu in TUI.
Optional	@RingPrimaryPhoneFirst	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SavedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort saved messages.
Optional	@SavedMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@SayAltGreetWarning	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SayAni	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Optional	@SayCopiedNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Optional	@SayDistributionList	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Optional	@SayMsgNumber	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Optional	@SaySender	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Optional	@SaySenderExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Optional	@SayTimestampAfter	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Optional	@SayTimestampBefore	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Optional	@SayTotalNew	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Optional	@SayTotalNewEmail	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SayTotalNewFax	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Optional	@SayTotalNewVoice	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Optional	@SayTotalReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Optional	@SayTotalSaved	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Optional	@SendBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber may send broadcast messages.
Optional	@SendConv	In	inherit	smallint (2 bytes)	Type of send conversation to use - standard or streamlined.
Optional	@SkipPasswordForKnownDevice	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Optional	@SpeechCompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechConfidenceThreshold	In	inherit	int (4 bytes)	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Optional	@SpeechIncompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechSensitivity	In	inherit	int (4 bytes)	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechSpeedVsAccuracy	In	inherit	int (4 bytes)	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Optional	@Speed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TimeLastCall	In	inherit	datetime (8 bytes)	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Title	In	inherit	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@UseBriefPrompts	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@UseVui	In	inherit	smallint (2 bytes)	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Optional	@VoiceName	In	explicit	varchar (40 characters)	Voice file to use for the subscriber's recorded voice name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@VoiceNameRequired	In	inherit	smallint (2 bytes)	A flag indicating whether a recorded voice name is required for this subscriber.
Optional	@Volume	In	inherit	int (4 bytes)	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Optional	@XferString	In	inherit	nvarchar (40 characters)	The alternate transfer option extension for the primary call handler for the subscriber.

Exceptions

csp_SubscriberModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause Object Not Found to be thrown: 1. The Subscriber object specified by @ObjectId was not found. The names of the object (Subscriber), table (tbl_UserSubscriber), and column (ObjectId) are included with the exception message. 2. The NotificationMwi with UsePrimaryExtension = 1 and SubscriberObjectId = @ObjectId was not found. The names of the object (Notification MWI), table (tbl_NotificationMwi), and column (SubscriberObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @ObjectId was not found. The names of the object (subscriber), parameter (@ObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.
1026	EXCEPTION_LICENSE_VIOLATION_FEATURE	The number of subscribers exceeds the allowed number for a licensed feature. The name of the feature is included with the message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AddressAfterRecord

Property Name	Value
Description:	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressAfterRecord
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressAfterRecord." If "tbl_UserSubscriber.AddressAfterRecord" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AddressMode

Property Name	Value
Description:	The default method the subscriber will use to address messages to other subscribers.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressMode." If "tbl_UserSubscriber.AddressMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_User.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltFirstName." If "tbl_User.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltLastName." If "tbl_User.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AnnounceUpcomingMeetings

Property Name	Value
Description:	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AnnounceUpcomingMeetings
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AnnounceUpcomingMeetings." If "tbl_UserSubscriber.AnnounceUpcomingMeetings" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@AssistantRowsPerPage

Property Name	Value
Description:	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AssistantRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AssistantRowsPerPage." If "tbl_UserSubscriber.AssistantRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallAnswerTimeout

Property Name	Value
Description:	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.CallAnswerTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.CallAnswerTimeout." If "tbl_UserSubscriber.CallAnswerTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@CcmId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmId." If "tbl_User.CcmId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmIdType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmIdType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CcmIdType
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmIdType." If "tbl_User.CcmIdType" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClientMatterCode." If "tbl_UserSubscriber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClockMode

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClockMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ClockMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClockMode." If "tbl_UserSubscriber.ClockMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmationConfidenceThreshold

Property Name	Value
Description:	Voice Recognition Confirmation Confidence Threshold
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmationConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmationConfidenceThreshold." If "tbl_UserSubscriber.ConfirmationConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteDeletedMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteDeletedMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteDeletedMessage." If "tbl_UserSubscriber.ConfirmDeleteDeletedMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMessage." If "tbl_UserSubscriber.ConfirmDeleteMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMultipleMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMultipleMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMultipleMessages." If "tbl_UserSubscriber.ConfirmDeleteMultipleMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ConversationTui

Property Name	Value
Description:	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationTui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationTui." If "tbl_UserSubscriber.ConversationTui" can be NULL, then explicit NULL is allowed.
Default Value:	SubMenu
Direction:	In
Update Column Value From Parameter:	True

@ConversationVui

Property Name	Value
Description:	The VUI conversation assigned to the subscriber.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationVui." If "tbl_UserSubscriber.ConversationVui" can be NULL, then explicit NULL is allowed.
Default Value:	VuiStart
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DelayAfterGreeting

Property Name	Value
Description:	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.DelayAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DelayAfterGreeting." If "tbl_UserSubscriber.DelayAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DeletedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.DeletedMessageSortOrder
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DeletedMessageSortOrder." If "tbl_UserSubscriber.DeletedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmailAddress." If "tbl_User.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmployeeId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmployeeId." If "tbl_User.EmployeeId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EnableMessageLocator

Property Name	Value
Description:	A flag indicating whether the message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableMessageLocator." If "tbl_UserSubscriber.EnableMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnablePersonalRules

Property Name	Value
Description:	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnablePersonalRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnablePersonalRules." If "tbl_UserSubscriber.EnablePersonalRules" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableTts

Property Name	Value
Description:	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableTts." If "tbl_UserSubscriber.EnableTts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableVisualMessageLocator

Property Name	Value
Description:	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableVisualMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableVisualMessageLocator." If "tbl_UserSubscriber.EnableVisualMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetDontRingPhone

Property Name	Value
Description:	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetDontRingPhone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetDontRingPhone." If "tbl_UserSubscriber.EnAltGreetDontRingPhone" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventMsg

Property Name	Value
Description:	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventMsg." If "tbl_UserSubscriber.EnAltGreetPreventMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventSkip

Property Name	Value
Description:	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventSkip
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventSkip." If "tbl_UserSubscriber.EnAltGreetPreventSkip" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptPrivateMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EncryptPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EncryptPrivateMessages." If "tbl_UserSubscriber.EncryptPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EnhancedSecurityAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (50 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EnhancedSecurityAlias." If "tbl_User.EnhancedSecurityAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ExitCallActionObjectId

Property Name	Value
Description:	The unique identifier of the CallAction object that is taken when a caller exits the subscriber conversation by pressing the * key or timing out.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ExitCallActionObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ExitCallActionObjectId." If "tbl_UserSubscriber.ExitCallActionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FirstDigitTimeout

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.FirstDigitTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.FirstDigitTimeout." If "tbl_UserSubscriber.FirstDigitTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.FirstName." If "tbl_User.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ForcedAuthorizationCode

Property Name	Value
Description:	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ForcedAuthorizationCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ForcedAuthorizationCode." If "tbl_UserSubscriber.ForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@GreetByName

Property Name	Value
Description:	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.GreetByName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.GreetByName." If "tbl_UserSubscriber.GreetByName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoRefresh

Property Name	Value
Description:	The rate (in minutes) at which Unity Inbox performs a refresh.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoRefresh
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoRefresh." If "tbl_UserSubscriber.InboxAutoRefresh" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoResolveMessageRecipients

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoResolveMessageRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoResolveMessageRecipients." If "tbl_UserSubscriber.InboxAutoResolveMessageRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxMessagesPerPage

Property Name	Value
Description:	The number of messages Unity Inbox displays in a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxMessagesPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxMessagesPerPage." If "tbl_UserSubscriber.InboxMessagesPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	20
Direction:	In
Update Column Value From Parameter:	True

@Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Initials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Initials." If "tbl_User.Initials" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@InterdigitDelay

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InterdigitDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InterdigitDelay." If "tbl_UserSubscriber.InterdigitDelay" can be NULL, then explicit NULL is allowed.
Default Value:	3000
Direction:	In
Update Column Value From Parameter:	True

@IsClockMode24Hour

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsClockMode24Hour
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsClockMode24Hour." If "tbl_UserSubscriber.IsClockMode24Hour" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@IsSetForVmEnrollment

Property Name	Value
Description:	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsVmEnrolled

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsVmEnrolled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsVmEnrolled." If "tbl_UserSubscriber.IsVmEnrolled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@JumpToMessagesOnLogin

Property Name	Value
Description:	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.JumpToMessagesOnLogin
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.JumpToMessagesOnLogin." If "tbl_UserSubscriber.JumpToMessagesOnLogin" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.LastName." If "tbl_User.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ListInDirectory." If "tbl_UserSubscriber.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtpAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtpAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character ' ' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchId

Property Name	Value
Description:	** obsolete -please use MediaSwitchObjectId
Notes:	
Business Rules:	
Developer Notes:	\$todo - remove when not in use by clients any longer
Reference Table/Column:	tbl_UserSubscriber.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MediaSwitchObjectId." If "tbl_UserSubscriber.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MediaSwitchObjectId." If "tbl_UserSubscriber.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageLocatorSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageLocatorSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageLocatorSortOrder." If "tbl_UserSubscriber.MessageLocatorSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageTypeMenu

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageTypeMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageTypeMenu." If "tbl_UserSubscriber.MessageTypeMenu" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NewMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort new messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageSortOrder." If "tbl_UserSubscriber.NewMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NewMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageStackOrder." If "tbl_UserSubscriber.NewMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Notes:	The default is 0 so that license check do occur - this is normally the desired behavior, since otherwise license violations will be caught later. The license checks in this procedure are "soft checks", designed to alert administrators but not to be relied upon for enforcement. It may be desirable at times to override the checks, such as when licenses are going to be purchased in the very near future but the subscriber additions need to be made immediately.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The unique identifier of the subscriber to modify.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PcaAddressBookRowsPerPage

Property Name	Value
Description:	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaAddressBookRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaAddressBookRowsPerPage." If "tbl_UserSubscriber.PcaAddressBookRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@PcaHomePage

Property Name	Value
Description:	The Home Page is the first page that is displayed after logging in to the PCA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaHomePage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaHomePage." If "tbl_UserSubscriber.PcaHomePage" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptSpeed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptSpeed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptSpeed." If "tbl_UserSubscriber.PromptSpeed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@PromptVolume

Property Name	Value
Description:	The volume level for playback of system prompts.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptVolume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptVolume." If "tbl_UserSubscriber.PromptVolume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RecordUnknownCallerName

Property Name	Value
Description:	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RecordUnknownCallerName

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RecordUnknownCallerName." If "tbl_UserSubscriber.RecordUnknownCallerName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RepeatMenu

Property Name	Value
Description:	The number of times to repeat a menu in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RepeatMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RepeatMenu." If "tbl_UserSubscriber.RepeatMenu" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RingPrimaryPhoneFirst

Property Name	Value
Description:	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RingPrimaryPhoneFirst
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RingPrimaryPhoneFirst." If "tbl_UserSubscriber.RingPrimaryPhoneFirst" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRToSender." If "tbl_User.RouteNDRToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort saved messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageSortOrder." If "tbl_UserSubscriber.SavedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageStackOrder." If "tbl_UserSubscriber.SavedMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@SayAltGreetWarning

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAltGreetWarning
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAltGreetWarning." If "tbl_UserSubscriber.SayAltGreetWarning" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayAni

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAni
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAni." If "tbl_UserSubscriber.SayAni" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayCopiedNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayCopiedNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayCopiedNames." If "tbl_UserSubscriber.SayCopiedNames" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayDistributionList

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayDistributionList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayDistributionList." If "tbl_UserSubscriber.SayDistributionList" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayMsgNumber

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayMsgNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayMsgNumber." If "tbl_UserSubscriber.SayMsgNumber" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySender

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySender." If "tbl_UserSubscriber.SaySender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySenderExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.SaySenderExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySenderExtension." If "tbl_UserSubscriber.SaySenderExtension" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampAfter

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampAfter
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampAfter." If "tbl_UserSubscriber.SayTimestampAfter" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampBefore

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampBefore

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampBefore." If "tbl_UserSubscriber.SayTimestampBefore" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNew

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNew
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNew." If "tbl_UserSubscriber.SayTotalNew" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewEmail

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewEmail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewEmail." If "tbl_UserSubscriber.SayTotalNewEmail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewFax

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewFax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewFax." If "tbl_UserSubscriber.SayTotalNewFax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewVoice

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewVoice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewVoice." If "tbl_UserSubscriber.SayTotalNewVoice" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTotalReceipts

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalReceipts." If "tbl_UserSubscriber.SayTotalReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalSaved

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalSaved
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalSaved." If "tbl_UserSubscriber.SayTotalSaved" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber may send broadcast messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendBroadcastMsg." If "tbl_UserSubscriber.SendBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendConv

Property Name	Value
Description:	Type of send conversation to use - standard or streamlined.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendConv
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SendConverationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendConv." If "tbl_UserSubscriber.SendConv" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@SkipPasswordForKnownDevice

Property Name	Value
Description:	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SkipPasswordForKnownDevice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SkipPasswordForKnownDevice." If "tbl_UserSubscriber.SkipPasswordForKnownDevice" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SpeechCompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechCompleteTimeout
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechCompleteTimeout." If "tbl_UserSubscriber.SpeechCompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@SpeechConfidenceThreshold

Property Name	Value
Description:	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechConfidenceThreshold." If "tbl_UserSubscriber.SpeechConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	45
Direction:	In
Update Column Value From Parameter:	True

@SpeechIncompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechIncompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechIncompleteTimeout." If "tbl_UserSubscriber.SpeechIncompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	750
Direction:	In
Update Column Value From Parameter:	True

@SpeechSensitivity

Property Name	Value
Description:	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSensitivity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSensitivity." If "tbl_UserSubscriber.SpeechSensitivity" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@SpeechSpeedVsAccuracy

Property Name	Value
Description:	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSpeedVsAccuracy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSpeedVsAccuracy." If "tbl_UserSubscriber.SpeechSpeedVsAccuracy" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Speed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Speed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Speed." If "tbl_UserSubscriber.Speed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeLastCall

Property Name	Value
Description:	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.TimeLastCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.TimeLastCall." If "tbl_UserSubscriber.TimeLastCall" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Title
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Title." If "tbl_User.Title" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UpdateBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UpdateBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UpdateBroadcastMsg." If "tbl_UserSubscriber.UpdateBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseBriefPrompts

Property Name	Value
Description:	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseBriefPrompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseBriefPrompts." If "tbl_UserSubscriber.UseBriefPrompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseVui

Property Name	Value
Description:	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseVui." If "tbl_UserSubscriber.UseVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for the subscriber's recorded voice name.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceNameRequired

Property Name	Value
Description:	A flag indicating whether a recorded voice name is required for this subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.VoiceNameRequired
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.VoiceNameRequired." If "tbl_UserSubscriber.VoiceNameRequired" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Volume

Property Name	Value
Description:	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Volume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Volume." If "tbl_UserSubscriber.Volume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@XferString

Property Name	Value
Description:	The alternate transfer option extension for the primary call handler for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.XferString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.XferString." If "tbl_UserSubscriber.XferString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.297. csp_SubscriberResetMWI

Resets MWI devices for a subscriber (e.g., user with a voice mailbox).

Additional Information

The parameter @Objectid must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a UserSubscriber object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_SubscriberResetMWI will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Subscriber object was not found. The names of the object (Subscriber), table (tbl_UserSubscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a UserSubscriber object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ObjectId." If "tbl_UserSubscriber.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.298. csp_SubscriberTemplateCreate

Creates a new Subscriber template, either from scratch or based on an existing template or user, by inserting a new row into tbl_UserSubscriber and tbl_User.

Additional Information

The parameters @Alias must be provided.

Do not use this procedure to create a plain user template. Rather use csp_UserTemplateCreate.

If a valid user template is passed in (@TemplateObjectId), this new template will be based on the existing user template. Otherwise, this new subscriber template will be created from scratch based on the values of the parameters.

The MediaSwitch is set to the MediaSwitch of the template from which the new template is created. If a template is not passed in, a mediaswitch must be passed in.

In addition to creating a new subscriber template in tbl_UserSubscriber, this procedure also creates several other subscriber related objects:

- * A user template by calling csp_UserTemplateCreate. See csp_UserTemplateCreate for more information.
- * A new call handler template by calling csp_CallhandlerTemplateCreate.
- * An exist action for the primary call handler is created by inserting a new row into tbl_CallAction.
- * Four default notification devices - Conversation, Pager, SMS, and SMTP. Also their corresponding notification rules, events, and criteria.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@AddressAfterRecord	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Optional	@AddressMode	In	inherit	smallint (2 bytes)	The default method the subscriber will use to address messages to other subscribers.
Optional	@AnnounceUpcoming Meetings	In	inherit	int (4 bytes)	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AssistantRowsPerPage	In	inherit	int (4 bytes)	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CallAnswerTimeout	In	inherit	int (4 bytes)	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Optional	@ClockMode	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@ConfirmationConfidenceThreshold	In	inherit	int (4 bytes)	Voice Recognition Confirmation Confidence Threshold
Optional	@ConfirmDeleteDeletedMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ConfirmDeleteMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Optional	@ConfirmDeleteMultipleMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Optional	@ConversationTui	In	explicit-withdefault	nvarchar (64 characters)	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Optional	@ConversationVui	In	explicit-withdefault	nvarchar (64 characters)	The VUI conversation assigned to the subscriber.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@DelayAfterGreeting	In	inherit	int (4 bytes)	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Optional	@DeletedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DisplayNameRule	In	inherit	smallint (2 bytes)	The format for generating the user display name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Optional	@EnableMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the message locator feature is enabled for the subscriber.
Optional	@EnablePersonalRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Optional	@EnableTts	In	inherit	smallint (2 bytes)	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Optional	@EnableVisualMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Optional	@EnAltGreetDontRingPhone	In	inherit	smallint (2 bytes)	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventMsg	In	inherit	smallint (2 bytes)	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventSkip	In	inherit	smallint (2 bytes)	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Optional	@EncryptPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Optional	@Exit_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@FirstDigitTimeout	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ForcedAuthorizationCode	In	inherit	varchar (40 characters)	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Optional	@GreetByName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Optional	@InboxAutoRefresh	In	inherit	int (4 bytes)	The rate (in minutes) at which Unity Inbox performs a refresh.
Optional	@InboxAutoResolveMessageRecipients	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Optional	@InboxMessagesPerPage	In	inherit	int (4 bytes)	The number of messages Unity Inbox displays in a page.
Optional	@InterdigitDelay	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Optional	@IsClockMode24Hour	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@IsSetForVmEnrollment	In	ignore	smallint (2 bytes)	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Optional	@IsVmEnrolled	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Optional	@JumpToMessagesOnLogin	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	The mailbox store info for any subscribers created from this template.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Optional	@MessageAgingPolicy ObjectId	In	inherit	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Optional	@MessageLocatorSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Optional	@MessageTypeMenu	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Optional	@NewMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort new messages.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@NewMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@NotificationType	In	inherit	smallint (2 bytes)	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Optional	@ObjectId	Out	inherit	char (36 characters)	The unique identifier (ObjectId) of the newly created template.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PcaAddressBookRowsPerPage	In	inherit	int (4 bytes)	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Optional	@PcaHomePage	In	inherit	lvarchar (256 characters)	The Home Page is the first page that is displayed after logging in to the PCA.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@PromptSpeed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Optional	@PromptVolume	In	inherit	int (4 bytes)	The volume level for playback of system prompts.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@ReceiveQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@RecordUnknownCallerName	In	inherit	smallint (2 bytes)	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RepeatMenu	In	inherit	int (4 bytes)	The number of times to repeat a menu in TUI.
Optional	@RingPrimaryPhoneFirst	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SavedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort saved messages.
Optional	@SavedMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@SayAltGreetWarning	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Optional	@SayAni	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Optional	@SayCopiedNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Optional	@SayDistributionList	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Optional	@SayMsgNumber	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SaySender	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Optional	@SaySenderExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Optional	@SayTimestampAfter	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Optional	@SayTimestampBefore	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Optional	@SayTotalNew	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Optional	@SayTotalNewEmail	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Optional	@SayTotalNewFax	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Optional	@SayTotalNewVoice	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Optional	@SayTotalReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Optional	@SayTotalSaved	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Optional	@SendBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber may send broadcast messages.
Optional	@SendConv	In	inherit	smallint (2 bytes)	Type of send conversation to use - standard or streamlined.
Optional	@SendQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) send limit.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SendReadReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Optional	@SkipPasswordForKnownDevice	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Optional	@SpeechCompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechConfidenceThreshold	In	inherit	int (4 bytes)	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechIncompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechSensitivity	In	inherit	int (4 bytes)	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Optional	@SpeechSpeedVsAccuracy	In	inherit	int (4 bytes)	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Optional	@Speed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TemplateAlias	In	ignore	nvarchar (64 characters)	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Optional	@TemplateObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Optional	@TimeLastCall	In	inherit	datetime (8 bytes)	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@UseBriefPrompts	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@UseVui	In	inherit	smallint (2 bytes)	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Optional	@VoiceNameRequired	In	inherit	smallint (2 bytes)	A flag indicating whether a recorded voice name is required for this subscriber.
Optional	@Volume	In	inherit	int (4 bytes)	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Optional	@WarningQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) warning limit.
Optional	@XferString	In	inherit	nvarchar (40 characters)	The alternate transfer option extension for the primary call handler for the subscriber.

Exceptions

csp_SubscriberTemplateCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MediaSwitch object was not found. The names of the object (Media switch), table (tbl_MediaSwitch), and column (ObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user template object as specified by @TemplateObjectId was not found. The names of the object (template), parameter (@TemplateObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AddressAfterRecord

Property Name	Value
Description:	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressAfterRecord
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressAfterRecord." If "tbl_UserSubscriber.AddressAfterRecord" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AddressMode

Property Name	Value
Description:	The default method the subscriber will use to address messages to other subscribers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressMode." If "tbl_UserSubscriber.AddressMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AnnounceUpcomingMeetings

Property Name	Value
Description:	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AnnounceUpcomingMeetings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AnnounceUpcomingMeetings." If "tbl_UserSubscriber.AnnounceUpcomingMeetings" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@AssistantRowsPerPage

Property Name	Value
Description:	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AssistantRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AssistantRowsPerPage." If "tbl_UserSubscriber.AssistantRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallAnswerTimeout

Property Name	Value
Description:	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.CallAnswerTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.CallAnswerTimeout." If "tbl_UserSubscriber.CallAnswerTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.CantChange." If "tbl_UserTemplate.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClientMatterCode." If "tbl_UserSubscriber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ClockMode

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClockMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ClockMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClockMode." If "tbl_UserSubscriber.ClockMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmationConfidenceThreshold

Property Name	Value
Description:	Voice Recognition Confirmation Confidence Threshold
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmationConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmationConfidenceThreshold." If "tbl_UserSubscriber.ConfirmationConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteDeletedMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteDeletedMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteDeletedMessage." If "tbl_UserSubscriber.ConfirmDeleteDeletedMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMessage." If "tbl_UserSubscriber.ConfirmDeleteMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMultipleMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMultipleMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMultipleMessages." If "tbl_UserSubscriber.ConfirmDeleteMultipleMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ConversationTui

Property Name	Value
Description:	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationTui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'SubMenu'."
Default Value:	SubMenu
Direction:	In
Update Column Value From Parameter:	True

@ConversationVui

Property Name	Value
Description:	The VUI conversation assigned to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'VuiStart'."
Default Value:	VuiStart
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DelayAfterGreeting

Property Name	Value
Description:	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.DelayAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DelayAfterGreeting." If "tbl_UserSubscriber.DelayAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DeletedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.DeletedMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DeletedMessageSortOrder." If "tbl_UserSubscriber.DeletedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameRule

Property Name	Value
Description:	The format for generating the user display name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DisplayNameRule

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DisplayNameRule." If "tbl_UserTemplate.DisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DoesntExpire." If "tbl_UserTemplate.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableMessageLocator

Property Name	Value
Description:	A flag indicating whether the message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableMessageLocator." If "tbl_UserSubscriber.EnableMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnablePersonalRules

Property Name	Value
Description:	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnablePersonalRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnablePersonalRules." If "tbl_UserSubscriber.EnablePersonalRules" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableTts

Property Name	Value
Description:	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableTts." If "tbl_UserSubscriber.EnableTts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableVisualMessageLocator

Property Name	Value
Description:	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableVisualMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableVisualMessageLocator." If "tbl_UserSubscriber.EnableVisualMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetDontRingPhone

Property Name	Value
Description:	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetDontRingPhone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetDontRingPhone." If "tbl_UserSubscriber.EnAltGreetDontRingPhone" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventMsg

Property Name	Value
Description:	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventMsg." If "tbl_UserSubscriber.EnAltGreetPreventMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventSkip

Property Name	Value
Description:	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventSkip
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventSkip." If "tbl_UserSubscriber.EnAltGreetPreventSkip" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptPrivateMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EncryptPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EncryptPrivateMessages." If "tbl_UserSubscriber.EncryptPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@FirstDigitTimeout

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.FirstDigitTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.FirstDigitTimeout." If "tbl_UserSubscriber.FirstDigitTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@ForcedAuthorizationCode

Property Name	Value
Description:	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ForcedAuthorizationCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ForcedAuthorizationCode." If "tbl_UserSubscriber.ForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@GreetByName

Property Name	Value
Description:	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.GreetByName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.GreetByName." If "tbl_UserSubscriber.GreetByName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoRefresh

Property Name	Value
Description:	The rate (in minutes) at which Unity Inbox performs a refresh.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoRefresh
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoRefresh." If "tbl_UserSubscriber.InboxAutoRefresh" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoResolveMessageRecipients

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoResolveMessageRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoResolveMessageRecipients." If "tbl_UserSubscriber.InboxAutoResolveMessageRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxMessagesPerPage

Property Name	Value
Description:	The number of messages Unity Inbox displays in a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxMessagesPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxMessagesPerPage." If "tbl_UserSubscriber.InboxMessagesPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	20
Direction:	In
Update Column Value From Parameter:	True

@InterdigitDelay

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InterdigitDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InterdigitDelay." If "tbl_UserSubscriber.InterdigitDelay" can be NULL, then explicit NULL is allowed.
Default Value:	3000
Direction:	In
Update Column Value From Parameter:	True

@IsClockMode24Hour

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsClockMode24Hour
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsClockMode24Hour." If "tbl_UserSubscriber.IsClockMode24Hour" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsSetForVmEnrollment

Property Name	Value
Description:	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsVmEnrolled

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsVmEnrolled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsVmEnrolled." If "tbl_UserSubscriber.IsVmEnrolled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@JumpToMessagesOnLogin

Property Name	Value
Description:	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.JumpToMessagesOnLogin
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.JumpToMessagesOnLogin." If "tbl_UserSubscriber.JumpToMessagesOnLogin" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ListInDirectory." If "tbl_UserSubscriber.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.LocationObjectId." If "tbl_User.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The mailbox store info for any subscribers created from this template.
Notes:	
Business Rules:	
Developer Notes:	The parameter must refer to tbl_UserTemplate.MailboxStoreObjectId.
Reference Table/Column:	tbl_UserTemplate.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MailboxStoreObjectId." If "tbl_UserTemplate.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MediaSwitchObjectId." If "tbl_UserSubscriber.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MessageAgingPolicyObjectId." If "tbl_UserTemplate.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageLocatorSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageLocatorSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageLocatorSortOrder." If "tbl_UserSubscriber.MessageLocatorSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageTypeMenu

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageTypeMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageTypeMenu." If "tbl_UserSubscriber.MessageTypeMenu" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NewMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort new messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageSortOrder." If "tbl_UserSubscriber.NewMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NewMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageStackOrder

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageStackOrder." If "tbl_UserSubscriber.NewMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.NotificationType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NotificationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.NotificationType." If "tbl_UserTemplate.NotificationType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier (ObjectId) of the newly created template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PcaAddressBookRowsPerPage

Property Name	Value
Description:	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaAddressBookRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaAddressBookRowsPerPage." If "tbl_UserSubscriber.PcaAddressBookRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@PcaHomePage

Property Name	Value
Description:	The Home Page is the first page that is displayed after logging in to the PCA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaHomePage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaHomePage." If "tbl_UserSubscriber.PcaHomePage" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptSpeed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptSpeed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptSpeed." If "tbl_UserSubscriber.PromptSpeed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@PromptVolume

Property Name	Value
Description:	The volume level for playback of system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptVolume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptVolume." If "tbl_UserSubscriber.PromptVolume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ReceiveQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ReceiveQuota." If "tbl_UserTemplate.ReceiveQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@RecordUnknownCallerName

Property Name	Value
Description:	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RecordUnknownCallerName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RecordUnknownCallerName." If "tbl_UserSubscriber.RecordUnknownCallerName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RepeatMenu

Property Name	Value
Description:	The number of times to repeat a menu in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RepeatMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RepeatMenu." If "tbl_UserSubscriber.RepeatMenu" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RingPrimaryPhoneFirst

Property Name	Value
Description:	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RingPrimaryPhoneFirst
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RingPrimaryPhoneFirst." If "tbl_UserSubscriber.RingPrimaryPhoneFirst" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRTToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRTToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRTToSender." If "tbl_User.RouteNDRTToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort saved messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageSortOrder

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageSortOrder." If "tbl_UserSubscriber.SavedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "saved" messages: * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageStackOrder." If "tbl_UserSubscriber.SavedMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@SayAltGreetWarning

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAltGreetWarning
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAltGreetWarning." If "tbl_UserSubscriber.SayAltGreetWarning" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayAni

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAni
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAni." If "tbl_UserSubscriber.SayAni" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayCopiedNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayCopiedNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayCopiedNames." If "tbl_UserSubscriber.SayCopiedNames" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayDistributionList

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayDistributionList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayDistributionList." If "tbl_UserSubscriber.SayDistributionList" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayMsgNumber

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayMsgNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayMsgNumber." If "tbl_UserSubscriber.SayMsgNumber" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySender

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySender." If "tbl_UserSubscriber.SaySender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySenderExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySenderExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySenderExtension." If "tbl_UserSubscriber.SaySenderExtension" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampAfter

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampAfter
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampAfter." If "tbl_UserSubscriber.SayTimestampAfter" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampBefore

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampBefore
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampBefore." If "tbl_UserSubscriber.SayTimestampBefore" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNew

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNew
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNew." If "tbl_UserSubscriber.SayTotalNew" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewEmail

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewEmail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewEmail." If "tbl_UserSubscriber.SayTotalNewEmail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewFax

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewFax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewFax." If "tbl_UserSubscriber.SayTotalNewFax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewVoice

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewVoice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewVoice." If "tbl_UserSubscriber.SayTotalNewVoice" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTotalReceipts

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalReceipts." If "tbl_UserSubscriber.SayTotalReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalSaved

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalSaved
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalSaved." If "tbl_UserSubscriber.SayTotalSaved" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber may send broadcast messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendBroadcastMsg." If "tbl_UserSubscriber.SendBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendConv

Property Name	Value
Description:	Type of send conversation to use - standard or streamlined.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendConv
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SendConverationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendConv." If "tbl_UserSubscriber.SendConv" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendQuota." If "tbl_UserTemplate.SendQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendReadReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendReadReceipts." If "tbl_UserTemplate.SendReadReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SkipPasswordForKnownDevice

Property Name	Value
Description:	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SkipPasswordForKnownDevice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SkipPasswordForKnownDevice." If "tbl_UserSubscriber.SkipPasswordForKnownDevice" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SpeechCompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechCompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechCompleteTimeout." If "tbl_UserSubscriber.SpeechCompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@SpeechConfidenceThreshold

Property Name	Value
Description:	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechConfidenceThreshold." If "tbl_UserSubscriber.SpeechConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	45
Direction:	In
Update Column Value From Parameter:	True

@SpeechIncompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechIncompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechIncompleteTimeout." If "tbl_UserSubscriber.SpeechIncompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	750
Direction:	In
Update Column Value From Parameter:	True

@SpeechSensitivity

Property Name	Value
Description:	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSensitivity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSensitivity." If "tbl_UserSubscriber.SpeechSensitivity" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@SpeechSpeedVsAccuracy

Property Name	Value
Description:	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSpeedVsAccuracy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSpeedVsAccuracy." If "tbl_UserSubscriber.SpeechSpeedVsAccuracy" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Speed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Speed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Speed." If "tbl_UserSubscriber.Speed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateAlias

Property Name	Value
Description:	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Notes:	The alias is recognizable in the native language and character set of the system, e.g. Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI client name lookup purposes.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TemplateObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeLastCall

Property Name	Value
Description:	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.TimeLastCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.TimeLastCall." If "tbl_UserSubscriber.TimeLastCall" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UpdateBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UpdateBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UpdateBroadcastMsg." If "tbl_UserSubscriber.UpdateBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseBriefPrompts

Property Name	Value
Description:	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseBriefPrompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseBriefPrompts." If "tbl_UserSubscriber.UseBriefPrompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseVui

Property Name	Value
Description:	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseVui

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseVui." If "tbl_UserSubscriber.UseVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceNameRequired

Property Name	Value
Description:	A flag indicating whether a recorded voice name is required for this subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.VoiceNameRequired
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.VoiceNameRequired." If "tbl_UserSubscriber.VoiceNameRequired" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Volume

Property Name	Value
Description:	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Volume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Volume." If "tbl_UserSubscriber.Volume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.WarningQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.WarningQuota." If "tbl_UserTemplate.WarningQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@XferString

Property Name	Value
Description:	The alternate transfer option extension for the primary call handler for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.XferString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.XferString." If "tbl_UserSubscriber.XferString" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.299. csp_SubscriberTemplateDelete

Deletes a Subscriber template from tbl_UserSubscriber as specified by the @ObjectId parameter.

Additional Information

Do not use this procedure to delete a plain user template. Rather use csp_UserTemplateDelete.

In addition to deleting the specified Subscriber object from tbl_UserSubscriber, this procedure also removes several other objects related to a subscriber template:

- * The user template (and its associated objects) is removed by calling csp_UserTemplateDelete.
- * The Callhandler associated with this template is removed from tbl_Callhandler.
- * The CallAction object associated with this template is removed from tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the subscriber template to delete.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_SubscriberTemplateDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber template object as specified by @ObjectId was not found. The names of the object (subscriber), parameter (@ObjectId), view (vw_SubscriberTemplate), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the subscriber template to delete.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.300. csp_SubscriberTemplateModify

Updates the attributes of a Subscriber template based on the values passed in via the parameters. The @ObjectId identifies the Subscriber object in tbl_UserSubscriber that is updated.

Additional Information

Do not use this procedure to modify a plain user template. Rather use csp_UserTemplateModify.

In addition to updating the properties of the Subscriber object in tbl_UserSubscriber, this procedure also updates several other objects related to a subscriber template:

- * The user template (and its associated objects) is updated by calling csp_UserTemplateModify. See csp_UserTemplateModify.
- * The CallAction object associated with this template is updated.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the subscriber template to modify.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@AddressAfterRecord	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Optional	@AddressMode	In	inherit	smallint (2 bytes)	The default method the subscriber will use to address messages to other subscribers.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AnnounceUpcoming Meetings	In	inherit	int (4 bytes)	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Optional	@AssistantRowsPerPage	In	inherit	int (4 bytes)	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CallAnswerTimeout	In	inherit	int (4 bytes)	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Optional	@ClockMode	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@ConfirmationConfidenceThreshold	In	inherit	int (4 bytes)	Voice Recognition Confirmation Confidence Threshold
Optional	@ConfirmDeleteDeletedMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.
Optional	@ConfirmDeleteMessage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ConfirmDeleteMultipleMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Optional	@ConversationTui	In	inherit	nvarchar (64 characters)	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Optional	@ConversationVui	In	inherit	nvarchar (64 characters)	The VUI conversation assigned to the subscriber.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@DelayAfterGreeting	In	inherit	int (4 bytes)	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Optional	@DeletedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DisplayNameRule	In	inherit	smallint (2 bytes)	The format for generating the user display name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Optional	@EnableMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the message locator feature is enabled for the subscriber.
Optional	@EnablePersonalRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Optional	@EnableTts	In	inherit	smallint (2 bytes)	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Optional	@EnableVisualMessageLocator	In	inherit	smallint (2 bytes)	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Optional	@EnAltGreetDontRingPhone	In	inherit	smallint (2 bytes)	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventMsg	In	inherit	smallint (2 bytes)	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Optional	@EnAltGreetPreventSkip	In	inherit	smallint (2 bytes)	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Optional	@EncryptPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Optional	@Exit_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ExitCallActionObjectId	In	inherit	char (36 characters)	The unique identifier of the CallAction object that is taken when a caller exits the subscriber conversation by pressing the * key or timing out.
Optional	@FirstDigitTimeout	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Optional	@ForcedAuthorizationCode	In	inherit	varchar (40 characters)	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Optional	@GreetByName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Optional	@InboxAutoRefresh	In	inherit	int (4 bytes)	The rate (in minutes) at which Unity Inbox performs a refresh.
Optional	@InboxAutoResolveMessageRecipients	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Optional	@InboxMessagesPerPage	In	inherit	int (4 bytes)	The number of messages Unity Inbox displays in a page.
Optional	@InterdigitDelay	In	inherit	int (4 bytes)	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Optional	@IsClockMode24Hour	In	inherit	smallint (2 bytes)	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Optional	@IsSetForVmEnrollment	In	ignore	smallint (2 bytes)	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Optional	@IsVmEnrolled	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@JumpToMessagesOnLogin	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Optional	@MessageAgingPolicyObjectId	In	inherit	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Optional	@MessageLocatorSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Optional	@MessageTypeMenu	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@NewMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort new messages.
Optional	@NewMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@NotificationType	In	inherit	smallint (2 bytes)	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PcaAddressBookRowsPerPage	In	inherit	int (4 bytes)	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Optional	@PcaHomePage	In	inherit	lvarchar (256 characters)	The Home Page is the first page that is displayed after logging in to the PCA.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@PromptSpeed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Optional	@PromptVolume	In	inherit	int (4 bytes)	The volume level for playback of system prompts.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@ReceiveQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@RecordUnknownCallerName	In	inherit	smallint (2 bytes)	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RepeatMenu	In	inherit	int (4 bytes)	The number of times to repeat a menu in TUI.
Optional	@RingPrimaryPhoneFirst	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SavedMessageSortOrder	In	inherit	smallint (2 bytes)	The order in which Cisco Unity Connection will sort saved messages.
Optional	@SavedMessageStackOrder	In	inherit	nvarchar (7 characters)	The order in which Cisco Unity Connection plays the following types of "saved" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Optional	@SayAltGreetWarning	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Optional	@SayAni	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Optional	@SayCopiedNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Optional	@SayDistributionList	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Optional	@SayMsgNumber	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SaySender	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Optional	@SaySenderExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Optional	@SayTimestampAfter	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Optional	@SayTimestampBefore	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Optional	@SayTotalNew	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Optional	@SayTotalNewEmail	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Optional	@SayTotalNewFax	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Optional	@SayTotalNewVoice	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Optional	@SayTotalReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Optional	@SayTotalSaved	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Optional	@SendBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber may send broadcast messages.
Optional	@SendConv	In	inherit	smallint (2 bytes)	Type of send conversation to use - standard or streamlined.
Optional	@SendQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) send limit.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SendReadReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Optional	@SkipPasswordForKnownDevice	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Optional	@SpeechCompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechConfidenceThreshold	In	inherit	int (4 bytes)	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SpeechIncompleteTimeout	In	inherit	int (4 bytes)	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Optional	@SpeechSensitivity	In	inherit	int (4 bytes)	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Optional	@SpeechSpeedVsAccuracy	In	inherit	int (4 bytes)	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Optional	@Speed	In	inherit	smallint (2 bytes)	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TimeLastCall	In	inherit	datetime (8 bytes)	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMsg	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@UseBriefPrompts	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@UseVui	In	inherit	smallint (2 bytes)	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Optional	@VoiceNameRequired	In	inherit	smallint (2 bytes)	A flag indicating whether a recorded voice name is required for this subscriber.
Optional	@Volume	In	inherit	int (4 bytes)	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Optional	@WarningQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) warning limit.
Optional	@XferString	In	inherit	nvarchar (40 characters)	The alternate transfer option extension for the primary call handler for the subscriber.

Exceptions

csp_SubscriberTemplateModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber template object as specified by @ObjectId was not found. The names of the object (subscriber), parameter (@ObjectId), view (vw_SubscriberTemplate), and column (ObjectId) are included with the exception message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AddressAfterRecord

Property Name	Value
Description:	A flag indicating whether the subscriber will be prompted to address message before or after it is recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressAfterRecord
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressAfterRecord." If "tbl_UserSubscriber.AddressAfterRecord" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AddressMode

Property Name	Value
Description:	The default method the subscriber will use to address messages to other subscribers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AddressMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AddressMode." If "tbl_UserSubscriber.AddressMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AnnounceUpcomingMeetings

Property Name	Value
Description:	The amount ahead of time, in minutes, that Connection will warn the subscriber of upcoming meetings when the subscriber calls into the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AnnounceUpcomingMeetings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AnnounceUpcomingMeetings." If "tbl_UserSubscriber.AnnounceUpcomingMeetings" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@AssistantRowsPerPage

Property Name	Value
Description:	This controls the number of entries to display per page for all tables in the Unity Assistant, e.g. the Private List Members table.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.AssistantRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.AssistantRowsPerPage." If "tbl_UserSubscriber.AssistantRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CallAnswerTimeout

Property Name	Value
Description:	The number of rings to wait for a subscriber destination to answer before the call is forwarded to the subscriber's primary phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.CallAnswerTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.CallAnswerTimeout." If "tbl_UserSubscriber.CallAnswerTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.CantChange." If "tbl_UserTemplate.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The client matter code to transmit to Call Manger when a phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assigning account or billing codes to the call. Whether or not the CMC will be transmitted is dictated by a setting on outbound call. The subscriber's CMC is used only if the outbound call doesn't have its own CMC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClientMatterCode." If "tbl_UserSubscriber.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ClockMode

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ClockMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ClockMode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ClockMode." If "tbl_UserSubscriber.ClockMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmationConfidenceThreshold

Property Name	Value
Description:	Voice Recognition Confirmation Confidence Threshold
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmationConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmationConfidenceThreshold." If "tbl_UserSubscriber.ConfirmationConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	60
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteDeletedMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single deleted message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteDeletedMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteDeletedMessage." If "tbl_UserSubscriber.ConfirmDeleteDeletedMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMessage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will request confirmation from a subscriber before proceeding with a deletion of a single new or saved message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMessage." If "tbl_UserSubscriber.ConfirmDeleteMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConfirmDeleteMultipleMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows the subscriber to choose which message they want to delete or whether Cisco Unity Connection permanently deletes the specified type of messages. Changes what Cisco Unity Connection does when subscribers press 3 > 2 > 2 from the Main menu to permanently delete multiple deleted messages at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConfirmDeleteMultipleMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConfirmDeleteMultipleMessages." If "tbl_UserSubscriber.ConfirmDeleteMultipleMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ConversationTui

Property Name	Value
Description:	The name of the conversation the subscriber uses to set up, send, and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationTui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationTui." If "tbl_UserSubscriber.ConversationTui" can be NULL, then explicit NULL is allowed.
Default Value:	SubMenu
Direction:	In
Update Column Value From Parameter:	True

@ConversationVui

Property Name	Value
Description:	The VUI conversation assigned to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ConversationVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ConversationVui." If "tbl_UserSubscriber.ConversationVui" can be NULL, then explicit NULL is allowed.
Default Value:	VuiStart
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DelayAfterGreeting

Property Name	Value
Description:	The amount of time (in milliseconds) Cisco Unity Connection will delay after playing greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.DelayAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DelayAfterGreeting." If "tbl_UserSubscriber.DelayAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DeletedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection presents deleted messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_UserSubscriber.DeletedMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.DeletedMessageSortOrder." If "tbl_UserSubscriber.DeletedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameRule

Property Name	Value
Description:	The format for generating the user display name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DisplayNameRule

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DisplayNameRule." If "tbl_UserTemplate.DisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DoesntExpire." If "tbl_UserTemplate.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableMessageLocator

Property Name	Value
Description:	A flag indicating whether the message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableMessageLocator." If "tbl_UserSubscriber.EnableMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnablePersonalRules

Property Name	Value
Description:	A flag indicating whether a subscriber's personal rules are enabled. Subscribers can use this setting to disable all personal rules at once.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnablePersonalRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnablePersonalRules." If "tbl_UserSubscriber.EnablePersonalRules" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableTts

Property Name	Value
Description:	A flag indicating whether TTS is enabled for the subscriber. Only relevant if TTS enabled in User's COS also.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableTts." If "tbl_UserSubscriber.EnableTts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableVisualMessageLocator

Property Name	Value
Description:	A flag indicating whether the visual message locator feature is enabled for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnableVisualMessageLocator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnableVisualMessageLocator." If "tbl_UserSubscriber.EnableVisualMessageLocator" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetDontRingPhone

Property Name	Value
Description:	A flag indicating whether a caller is prevented from being transferred to the subscriber phone when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetDontRingPhone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetDontRingPhone." If "tbl_UserSubscriber.EnAltGreetDontRingPhone" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventMsg

Property Name	Value
Description:	A flag indicating whether callers can leave a message after the greeting when the subscriber alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventMsg." If "tbl_UserSubscriber.EnAltGreetPreventMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnAltGreetPreventSkip

Property Name	Value
Description:	A flag indicating whether callers can skip the greeting while it is playing when the alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EnAltGreetPreventSkip
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EnAltGreetPreventSkip." If "tbl_UserSubscriber.EnAltGreetPreventSkip" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptPrivateMessages

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection encrypts messages from the subscriber that are marked private.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.EncryptPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.EncryptPrivateMessages." If "tbl_UserSubscriber.EncryptPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ExitCallActionObjectId

Property Name	Value
Description:	The unique identifier of the CallAction object that is taken when a caller exits the subscriber conversation by pressing the * key or timing out.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ExitCallActionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ExitCallActionObjectId." If "tbl_UserSubscriber.ExitCallActionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FirstDigitTimeout

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for first digit when collecting touch tones.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.FirstDigitTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.FirstDigitTimeout." If "tbl_UserSubscriber.FirstDigitTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ForcedAuthorizationCode

Property Name	Value
Description:	A valid authorization code that is entered prior to extending calls to classes of dialed numbers, for example, external, toll and international calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ForcedAuthorizationCode
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ForcedAuthorizationCode." If "tbl_UserSubscriber.ForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@GreetByName

Property Name	Value
Description:	A flag indicating whether the subscriber hears his/her name when they log into their mailbox over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.GreetByName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.GreetByName." If "tbl_UserSubscriber.GreetByName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoRefresh

Property Name	Value
Description:	The rate (in minutes) at which Unity Inbox performs a refresh.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoRefresh
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoRefresh." If "tbl_UserSubscriber.InboxAutoRefresh" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@InboxAutoResolveMessageRecipients

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection automatically resolves a recipient address entered in the To, Cc or Bcc fields to a subscriber or distribution list. Known as the "AutoResolve" feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxAutoResolveMessageRecipients
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxAutoResolveMessageRecipients." If "tbl_UserSubscriber.InboxAutoResolveMessageRecipients" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@InboxMessagesPerPage

Property Name	Value
Description:	The number of messages Unity Inbox displays in a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InboxMessagesPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InboxMessagesPerPage." If "tbl_UserSubscriber.InboxMessagesPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	20
Direction:	In
Update Column Value From Parameter:	True

@InterdigitDelay

Property Name	Value
Description:	The amount of time to wait (in milliseconds) for input between touch tones when collecting digits in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.InterdigitDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.InterdigitDelay." If "tbl_UserSubscriber.InterdigitDelay" can be NULL, then explicit NULL is allowed.
Default Value:	3000
Direction:	In
Update Column Value From Parameter:	True

@IsClockMode24Hour

Property Name	Value
Description:	The time format used for the message timestamps that the subscriber hears when they listen to their messages over the phone.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsClockMode24Hour
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsClockMode24Hour." If "tbl_UserSubscriber.IsClockMode24Hour" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IsSetForVmEnrollment

Property Name	Value
Description:	Temporary placeholder until IsVmEnrolled can be phased out. At that point, delete this column and rename tbl_UserSubscriber.IsVmEnrolled to IsSetForVmEnrollment.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsVmEnrolled

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the enrollment conversation (record a voice name, indicate if they are listed in the directory, etc.) for the subscriber when they login.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.IsVmEnrolled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.IsVmEnrolled." If "tbl_UserSubscriber.IsVmEnrolled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@JumpToMessagesOnLogin

Property Name	Value
Description:	A flag indicating whether the subscriber conversation jumps directly to the first message in the message stack after subscriber sign-in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.JumpToMessagesOnLogin
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.JumpToMessagesOnLogin." If "tbl_UserSubscriber.JumpToMessagesOnLogin" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the subscriber in the phone directory for outside callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.ListInDirectory." If "tbl_UserSubscriber.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MailboxStoreObjectId." If "tbl_UserTemplate.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MediaSwitchObjectId." If "tbl_UserSubscriber.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MessageAgingPolicyObjectId." If "tbl_UserTemplate.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageLocatorSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageLocatorSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageLocatorSortOrder." If "tbl_UserSubscriber.MessageLocatorSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageTypeMenu

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.MessageTypeMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.MessageTypeMenu." If "tbl_UserSubscriber.MessageTypeMenu" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NewMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort new messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageSortOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageSortOrder." If "tbl_UserSubscriber.NewMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NewMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.NewMessageStackOrder

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.NewMessageStackOrder." If "tbl_UserSubscriber.NewMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.NotificationType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NotificationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.NotificationType." If "tbl_UserTemplate.NotificationType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the subscriber template to modify.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PcaAddressBookRowsPerPage

Property Name	Value
Description:	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaAddressBookRowsPerPage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaAddressBookRowsPerPage." If "tbl_UserSubscriber.PcaAddressBookRowsPerPage" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@PcaHomePage

Property Name	Value
Description:	The Home Page is the first page that is displayed after logging in to the PCA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PcaHomePage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PcaHomePage." If "tbl_UserSubscriber.PcaHomePage" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptSpeed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptSpeed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptSpeed." If "tbl_UserSubscriber.PromptSpeed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@PromptVolume

Property Name	Value
Description:	The volume level for playback of system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.PromptVolume
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.PromptVolume." If "tbl_UserSubscriber.PromptVolume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ReceiveQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ReceiveQuota." If "tbl_UserTemplate.ReceiveQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@RecordUnknownCallerName

Property Name	Value
Description:	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RecordUnknownCallerName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RecordUnknownCallerName." If "tbl_UserSubscriber.RecordUnknownCallerName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RepeatMenu

Property Name	Value
Description:	The number of times to repeat a menu in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RepeatMenu
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RepeatMenu." If "tbl_UserSubscriber.RepeatMenu" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@RingPrimaryPhoneFirst

Property Name	Value
Description:	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.RingPrimaryPhoneFirst
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.RingPrimaryPhoneFirst." If "tbl_UserSubscriber.RingPrimaryPhoneFirst" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRToSender." If "tbl_User.RouteNDRToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort saved messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageSortOrder

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MessageSortOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageSortOrder." If "tbl_UserSubscriber.SavedMessageSortOrder" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@SavedMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "saved" messages: * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SavedMessageStackOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (7 characters)
Custom Type:	MessageStackOrder
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SavedMessageStackOrder." If "tbl_UserSubscriber.SavedMessageStackOrder" can be NULL, then explicit NULL is allowed.
Default Value:	1234567
Direction:	In
Update Column Value From Parameter:	True

@SayAltGreetWarning

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAltGreetWarning
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAltGreetWarning." If "tbl_UserSubscriber.SayAltGreetWarning" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayAni

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayAni
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayAni." If "tbl_UserSubscriber.SayAni" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayCopiedNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayCopiedNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayCopiedNames." If "tbl_UserSubscriber.SayCopiedNames" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayDistributionList

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayDistributionList
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayDistributionList." If "tbl_UserSubscriber.SayDistributionList" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayMsgNumber

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayMsgNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayMsgNumber." If "tbl_UserSubscriber.SayMsgNumber" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySender

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySender." If "tbl_UserSubscriber.SaySender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SaySenderExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SaySenderExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SaySenderExtension." If "tbl_UserSubscriber.SaySenderExtension" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampAfter

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampAfter
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampAfter." If "tbl_UserSubscriber.SayTimestampAfter" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTimestampBefore

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTimestampBefore
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTimestampBefore." If "tbl_UserSubscriber.SayTimestampBefore" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNew

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNew
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNew." If "tbl_UserSubscriber.SayTotalNew" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewEmail

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewEmail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewEmail." If "tbl_UserSubscriber.SayTotalNewEmail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewFax

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewFax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewFax." If "tbl_UserSubscriber.SayTotalNewFax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalNewVoice

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalNewVoice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalNewVoice." If "tbl_UserSubscriber.SayTotalNewVoice" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SayTotalReceipts

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalReceipts." If "tbl_UserSubscriber.SayTotalReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayTotalSaved

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SayTotalSaved
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SayTotalSaved." If "tbl_UserSubscriber.SayTotalSaved" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber may send broadcast messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendBroadcastMsg." If "tbl_UserSubscriber.SendBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendConv

Property Name	Value
Description:	Type of send conversation to use - standard or streamlined.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SendConv
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SendConverationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SendConv." If "tbl_UserSubscriber.SendConv" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendQuota." If "tbl_UserTemplate.SendQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendReadReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendReadReceipts." If "tbl_UserTemplate.SendReadReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SkipPasswordForKnownDevice

Property Name	Value
Description:	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SkipPasswordForKnownDevice
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SkipPasswordForKnownDevice." If "tbl_UserSubscriber.SkipPasswordForKnownDevice" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SpeechCompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar.</p> <p>A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechCompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechCompleteTimeout." If "tbl_UserSubscriber.SpeechCompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@SpeechConfidenceThreshold

Property Name	Value
Description:	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechConfidenceThreshold
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechConfidenceThreshold." If "tbl_UserSubscriber.SpeechConfidenceThreshold" can be NULL, then explicit NULL is allowed.
Default Value:	45
Direction:	In
Update Column Value From Parameter:	True

@SpeechIncompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechIncompleteTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechIncompleteTimeout." If "tbl_UserSubscriber.SpeechIncompleteTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	750
Direction:	In
Update Column Value From Parameter:	True

@SpeechSensitivity

Property Name	Value
Description:	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSensitivity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSensitivity." If "tbl_UserSubscriber.SpeechSensitivity" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@SpeechSpeedVsAccuracy

Property Name	Value
Description:	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.SpeechSpeedVsAccuracy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.SpeechSpeedVsAccuracy." If "tbl_UserSubscriber.SpeechSpeedVsAccuracy" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Speed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Speed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Speed." If "tbl_UserSubscriber.Speed" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeLastCall

Property Name	Value
Description:	The date and time when the subscriber last accessed their mailbox by phone (last time they were offered messages).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.TimeLastCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.TimeLastCall." If "tbl_UserSubscriber.TimeLastCall" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@UpdateBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UpdateBroadcastMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UpdateBroadcastMsg." If "tbl_UserSubscriber.UpdateBroadcastMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseBriefPrompts

Property Name	Value
Description:	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseBriefPrompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseBriefPrompts." If "tbl_UserSubscriber.UseBriefPrompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseVui

Property Name	Value
Description:	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.UseVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.UseVui." If "tbl_UserSubscriber.UseVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceNameRequired

Property Name	Value
Description:	A flag indicating whether a recorded voice name is required for this subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.VoiceNameRequired
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.VoiceNameRequired." If "tbl_UserSubscriber.VoiceNameRequired" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Volume

Property Name	Value
Description:	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.Volume

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	Volume
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.Volume." If "tbl_UserSubscriber.Volume" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.WarningQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.WarningQuota." If "tbl_UserTemplate.WarningQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@XferString

Property Name	Value
Description:	The alternate transfer option extension for the primary call handler for the subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserSubscriber.XferString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserSubscriber.XferString." If "tbl_UserSubscriber.XferString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.301. csp_TaskContextCreate

Creates a new TaskContext object by inserting a new row into tbl_TaskContext.

Additional Information

The parameters @Name and @TaskPeriodicObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	varchar (64 characters)	The text name for the name value pair.
Required	@TaskPeriodicObjectId	In	inherit	char (36 characters)	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Value	In	inherit	nvarchar (255 characters)	The value for the name, value pair.

Exceptions

csp_TaskContextCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name and @TaskPeriodicObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Name

Property Name	Value
Description:	The text name for the name value pair.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.Name." If "tbl_TaskContext.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TaskPeriodicObjectId

Property Name	Value
Description:	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.TaskPeriodicObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.TaskPeriodicObjectId." If "tbl_TaskContext.TaskPeriodicObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value for the name, value pair.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.Value." If "tbl_TaskContext.Value" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.302. csp_TaskContextDelete

Deletes a TaskContext object from tbl_TaskContext as specified by the combination of the @Name and TaskPeriodicObjectId parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	varchar (64 characters)	The text name for the name value pair.
Required	@TaskPeriodicObjectId	In	inherit	char (36 characters)	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_TaskContextDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name and @TaskPeriodicObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified TaskContext object was not found. The names of the object (Task context), table (tbl_TaskContext), and columns (TaskPeriodicObjectId, Name) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_TaskContext), and the columns (TaskPeriodicObjectId, Name) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Name

Property Name	Value
Description:	The text name for the name value pair.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.Name." If "tbl_TaskContext.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TaskPeriodicObjectId

Property Name	Value
Description:	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.TaskPeriodicObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.TaskPeriodicObjectId." If "tbl_TaskContext.TaskPeriodicObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.303. csp_TaskContextModify

Modify a row in tbl_TaskContext

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	varchar (64 characters)	The text name for the name value pair.
Required	@TaskPeriodicObjectId	In	inherit	char (36 characters)	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Value	In	inherit	nvarchar (255 characters)	The value for the name, value pair.

Exceptions

csp_TaskContextModify does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name for the name value pair.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.Name." If "tbl_TaskContext.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TaskPeriodicObjectId

Property Name	Value
Description:	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.TaskPeriodicObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.TaskPeriodicObjectId." If "tbl_TaskContext.TaskPeriodicObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value for the name, value pair.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskContext.Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskContext.Value." If "tbl_TaskContext.Value" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.304. csp_TaskDefinitionCreate

Creates a new TaskDefinition object by inserting a new row into tbl_TaskDefinition.

Additional Information

The parameters @ClassName and @DisplayNameKey must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ClassName	In	inherit	varchar (255 characters)	The full name of the java class to load when running this task.
Required	@DisplayNameKey	In	inherit	varchar (255 characters)	A key into the localized text table, which provides a display name for this task.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@IsAdHoc	In	inherit	smallint (2 bytes)	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.
Optional	@Summary	In	inherit	nvarchar (255 characters)	A summary of the task used for display purposes.

Exceptions

csp_TaskDefinitionCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@ClassName and @DisplayNameKey) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.ClassName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.ClassName." If "tbl_TaskDefinition.ClassName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameKey

Property Name	Value
Description:	A key into the localized text table, which provides a display name for this task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.DisplayNameKey
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.DisplayNameKey." If "tbl_TaskDefinition.DisplayNameKey" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsAdHoc

Property Name	Value
Description:	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_TaskDefinition.IsAdHoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.IsAdHoc." If "tbl_TaskDefinition.IsAdHoc" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Summary

Property Name	Value
Description:	A summary of the task used for display purposes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.Summary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.Summary." If "tbl_TaskDefinition.Summary" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.305. csp_TaskDefinitionDelete

Deletes a TaskDefinition object from tbl_TaskDefinition as specified by the combination of the @ClassName and @DisplayNameKey parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ClassName	In	inherit	varchar (255 characters)	The full name of the java class to load when running this task.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_TaskDefinitionDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ClassName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified TaskDefinition object was not found. The names of the object (Task definition), table (tbl_TaskDefinition), and column (ClassName) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_TaskDefinition), and the column (ClassName) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_TaskDefinition.ClassName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.ClassName." If "tbl_TaskDefinition.ClassName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.306. csp_TaskDefinitionModify

Updates the attributes of a TaskDefinition object based on the values passed in via the parameters. The @ClassName and @DisplayNameKey parameters identify the TaskDefinition object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ClassName	In	inherit	varchar (255 characters)	The full name of the java class to load when running this task.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DisplayNameKey	In	inherit	varchar (255 characters)	A key into the localized text table, which provides a display name for this task.
Optional	@IsAdHoc	In	inherit	smallint (2 bytes)	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.
Optional	@Summary	In	inherit	nvarchar (255 characters)	A summary of the task used for display purposes.

Exceptions

csp_TaskDefinitionModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ClassName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified TaskDefinition object was not found. The names of the object (Task definition), table (tbl_TaskDefinition), and column (ClassName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.ClassName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.ClassName." If "tbl_TaskDefinition.ClassName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameKey

Property Name	Value
Description:	A key into the localized text table, which provides a display name for this task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.DisplayNameKey
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.DisplayNameKey." If "tbl_TaskDefinition.DisplayNameKey" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsAdHoc

Property Name	Value
Description:	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.IsAdHoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.IsAdHoc." If "tbl_TaskDefinition.IsAdHoc" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Summary

Property Name	Value
Description:	A summary of the task used for display purposes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskDefinition.Summary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskDefinition.Summary." If "tbl_TaskDefinition.Summary" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.307. csp_TaskPeriodicCreate

Creates a new TaskPeriodic object by inserting a new row into tbl_TaskPeriodic.

Additional Information

If default values are not explicitly set, the defaults will be set to the value of their corresponding parameter. For example, if @DefaultPeriod is NULL, then @DefaultPeriod will be set to @Period.

The parameter @ClassName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ClassName	In	inherit	varchar (255 characters)	The full name of the java class to load when running this task.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DefaultDelayOnStart	In	inherit	int (4 bytes)	The original setting for DelayOnStart.
Optional	@DefaultIsEnabled	In	inherit	smallint (2 bytes)	The original setting for IsEnabled
Optional	@DefaultPeriod	In	inherit	int (4 bytes)	The original setting for Period.
Optional	@DefaultRunOnStart	In	inherit	smallint (2 bytes)	The original setting for RunOnStart.
Optional	@DefaultSchedExpression	In	inherit	nvarchar (255 characters)	The original setting for SchedExpression.
Optional	@DelayOnStart	In	inherit	int (4 bytes)	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.
Optional	@InstanceDetails	In	inherit	nvarchar (255 characters)	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether SysAgent should schedule this periodic task.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsReadOnly	In	inherit	smallint (2 bytes)	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Optional	@Period	In	inherit	int (4 bytes)	The interval (in minutes) at which SysAgent will run the task.
Optional	@RunOnStart	In	inherit	smallint (2 bytes)	A flag indicating whether this task will be run during startup.
Optional	@SchedExpression	In	inherit	nvarchar (255 characters)	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.

Exceptions

csp_TaskPeriodicCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ClassName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.ClassName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.ClassName." If "tbl_TaskPeriodic.ClassName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultDelayOnStart

Property Name	Value
Description:	The original setting for DelayOnStart.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DefaultDelayOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DefaultDelayOnStart." If "tbl_TaskPeriodic.DefaultDelayOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultIsEnabled

Property Name	Value
Description:	The original setting for IsEnabled
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DefaultIsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DefaultIsEnabled." If "tbl_TaskPeriodic.DefaultIsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultPeriod

Property Name	Value
Description:	The original setting for Period.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DefaultPeriod
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DefaultPeriod." If "tbl_TaskPeriodic.DefaultPeriod" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultRunOnStart

Property Name	Value
Description:	The original setting for RunOnStart.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DefaultRunOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DefaultRunOnStart." If "tbl_TaskPeriodic.DefaultRunOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultSchedExpression

Property Name	Value
Description:	The original setting for SchedExpression.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_TaskPeriodic.DefaultSchedExpression
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DefaultSchedExpression." If "tbl_TaskPeriodic.DefaultSchedExpression" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DelayOnStart

Property Name	Value
Description:	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DelayOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DelayOnStart." If "tbl_TaskPeriodic.DelayOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@InstanceDetails

Property Name	Value
Description:	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.InstanceDetails
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.InstanceDetails." If "tbl_TaskPeriodic.InstanceDetails" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether SysAgent should schedule this periodic task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.IsEnabled." If "tbl_TaskPeriodic.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsReadOnly

Property Name	Value
Description:	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.IsReadOnly

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.IsReadOnly." If "tbl_TaskPeriodic.IsReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.ObjectId." If "tbl_TaskPeriodic.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Period

Property Name	Value
Description:	The interval (in minutes) at which SysAgent will run the task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.Period
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.Period." If "tbl_TaskPeriodic.Period" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RunOnStart

Property Name	Value
Description:	A flag indicating whether this task will be run during startup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.RunOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.RunOnStart." If "tbl_TaskPeriodic.RunOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SchedExpression

Property Name	Value
Description:	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.SchedExpression
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.SchedExpression." If "tbl_TaskPeriodic.SchedExpression" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

6.308. csp_TaskPeriodicDelete

Deletes a TaskPeriodic object from tbl_TaskPeriodic as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_TaskPeriodicDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified TaskPeriodic object was not found. The names of the object (Task periodic), table (tbl_TaskPeriodic), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_TaskPeriodic), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.ObjectId." If "tbl_TaskPeriodic.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.309. csp_TaskPeriodicModify

Updates the attributes of a TaskPeriodic object based on the values passed in via the parameters. The @ObjectId identifies the TaskPeriodic object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ClassName	In	inherit	varchar (255 characters)	The full name of the java class to load when running this task.
Optional	@DelayOnStart	In	inherit	int (4 bytes)	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.
Optional	@InstanceDetails	In	inherit	nvarchar (255 characters)	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether SysAgent should schedule this periodic task.
Optional	@IsReadOnly	In	inherit	smallint (2 bytes)	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.
Optional	@Period	In	inherit	int (4 bytes)	The interval (in minutes) at which SysAgent will run the task.
Optional	@RunOnStart	In	inherit	smallint (2 bytes)	A flag indicating whether this task will be run during startup.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SchedExpression	In	inherit	nvarchar (255 characters)	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.

Exceptions

csp_TaskPeriodicModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ClassName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified TaskPeriodic object was not found. The names of the object (Task periodic), table (tbl_TaskPeriodic), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.ClassName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.ClassName." If "tbl_TaskPeriodic.ClassName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DelayOnStart

Property Name	Value
Description:	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.DelayOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.DelayOnStart." If "tbl_TaskPeriodic.DelayOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@InstanceDetails

Property Name	Value
Description:	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.InstanceDetails
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.InstanceDetails." If "tbl_TaskPeriodic.InstanceDetails" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether SysAgent should schedule this periodic task.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.IsEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.IsEnabled." If "tbl_TaskPeriodic.IsEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsReadOnly

Property Name	Value
Description:	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.IsReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.IsReadOnly." If "tbl_TaskPeriodic.IsReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_TaskPeriodic.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.ObjectId." If "tbl_TaskPeriodic.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Period

Property Name	Value
Description:	The interval (in minutes) at which SysAgent will run the task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.Period
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.Period." If "tbl_TaskPeriodic.Period" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RunOnStart

Property Name	Value
Description:	A flag indicating whether this task will be run during startup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.RunOnStart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.RunOnStart." If "tbl_TaskPeriodic.RunOnStart" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SchedExpression

Property Name	Value
Description:	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TaskPeriodic.SchedExpression
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TaskPeriodic.SchedExpression." If "tbl_TaskPeriodic.SchedExpression" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.310. csp_TimeZoneLocalUtc

Converts local time to Coordinated Universal Time (UTC) using the provided timezone identifier.

Additional Information

The parameters @TimeZoneId and @LocalDateTime must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LocalDateTime	In	ignore	datetime (8 bytes)	The local date and time.
Required	@TimeZoneId	In	inherit	int (4 bytes)	The unique ID for this time zone entry.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@UtcDateTime	Out	ignore	datetime (8 bytes)	The target UTC date and time, which is converted to local time.

Exceptions

csp_TimeZoneLocalUtc will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@TimeZoneId and @UtcDateTime) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Timezone object was not found. The names of the object (Timezone), table (tbl_TimeZone), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LocalDateTime

Property Name	Value
Description:	The local date and time.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeZoneId

Property Name	Value
Description:	The unique ID for this time zone entry.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TimeZone.TimeZoneId
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TimeZone.TimeZoneId." If "tbl_TimeZone.TimeZoneId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UtcDateTime

Property Name	Value
Description:	The target UTC date and time, which is converted to local time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.311. csp_TimeZoneLocalUtc_s

Wrapper around csp_TimeZoneLocalUtc that uses varchars to transmit the input and output dates.

Additional Information

This is provided in case Java clients need a backup plan for the problem described in CSCsh84889. If things look OK, this proc can be deleted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LocalDateTime	In	ignore	varchar (30 characters)	Date/time to convert to UTC.
Required	@TimeZoneId	In	inherit	int (4 bytes)	The unique ID for this time zone entry.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@UtcDateTime	Out	ignore	varchar (30 characters)	

Exceptions

csp_TimeZoneLocalUtc_s will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1004	EXCEPTION_OBJECT_NOTFOUND	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LocalDateTime

Property Name	Value
Description:	Date/time to convert to UTC.
Notes:	Format "Y-M-D h:m:s" (24-hour clock).
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required

Property Name	Value
SQL Data Type/Length:	varchar (30 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeZoneId

Property Name	Value
Description:	The unique ID for this time zone entry.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TimeZone.TimeZoneId
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TimeZone.TimeZoneId." If "tbl_TimeZone.TimeZoneId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UtcDateTime

Property Name	Value
Description:	
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (30 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out

Property Name	Value
Update Column Value From Parameter:	False

6.312. csp_TimeZoneServerUtc

Converts a time from server local time to UTC

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ServerTime	In	ignore	datetime (8 bytes)	Time in server local time.
Optional	@UtcTime	Out	ignore	datetime (8 bytes)	Time in UTC.

Exceptions

csp_TimeZoneServerUtc does not throw any exceptions.

Parameter Properties

@ServerTime

Property Name	Value
Description:	Time in server local time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UtcTime

Property Name	Value
Description:	Time in UTC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.313. csp_TimeZoneSet

Sets the time zone for a VMS. It sets the timezone in all user templates, default users, and for the VMS.

Additional Information

The parameter @TimeZoneId must be provided.

This procedure is used mainly for calling from setup.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TimeZoneId	In	inherit	int (4 bytes)	The unique ID for this time zone entry.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_TimeZoneSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @TimeZoneId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified TimeZone object was not found. The names of the object (Time zone), table (tbl_TimeZone), and column (TimeZoneId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeZoneld

Property Name	Value
Description:	The unique ID for this time zone entry.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TimeZone.TimeZoneId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TimeZone.TimeZoneId." If "tbl_TimeZone.TimeZoneId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.314. csp_TimeZoneUtcLocal

Converts Coordinated Universal Time (UTC) to local time using the provided timezone identifier.

Additional Information

The parameters @TimeZoneId and @UtcDateTime must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TimeZoneId	In	inherit	int (4 bytes)	The unique ID for this time zone entry.
Required	@UtcDateTime	In	ignore	datetime (8 bytes)	The target UTC date and time, which is converted to local time.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@LocalDateTime	Out	ignore	datetime (8 bytes)	The local date and time.

Exceptions

csp_TimeZoneUtcLocal will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@TimeZoneId and @UtcDateTime) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Timezone object was not found. The names of the object (Timezone), table (tbl_TimeZone), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LocalDateTime

Property Name	Value
Description:	The local date and time.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@TimeZoneId

Property Name	Value
Description:	The unique ID for this time zone entry.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TimeZone.TimeZoneId
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TimeZone.TimeZoneId." If "tbl_TimeZone.TimeZoneId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UtcDateTime

Property Name	Value
Description:	The target UTC date and time, which is converted to local time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.315. csp_TimeZoneUtcLocal_s

Wrapper around csp_TimeZoneUtcLocal that uses varchars to transmit the input and output dates.

Additional Information

This is provided in case Java clients need a backup plan for the problem described in CSCsh84889. If things look OK, this proc can be deleted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TimeZoneId	In	inherit	int (4 bytes)	The unique ID for this time zone entry.
Required	@UtcDateTime	In	ignore	varchar (30 characters)	UTC date/time to convert to local time.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@LocalDateTime	Out	ignore	varchar (30 characters)	

Exceptions

csp_TimeZoneUtcLocal_s will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1004	EXCEPTION_OBJECT_NOTFOUND	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LocalDateTime

Property Name	Value
Description:	
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (30 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@TimeZoneId

Property Name	Value
Description:	The unique ID for this time zone entry.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TimeZone.TimeZoneId
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TimeZone.TimeZoneId." If "tbl_TimeZone.TimeZoneId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UtcDateTime

Property Name	Value
Description:	UTC date/time to convert to local time.
Notes:	Format "Y-M-D h:m:s" (24-hour clock).
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (30 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

6.316. csp_TimeZoneUtcServer

Converts UTC time to server local time.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ServerTime	Out	ignore	datetime (8 bytes)	Time in server local time.
Optional	@UtcTime	In	ignore	datetime (8 bytes)	Time in UTC.

Exceptions

csp_TimeZoneUtcServer does not throw any exceptions.

Parameter Properties

@ServerTime

Property Name	Value
Description:	Time in server local time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@UtcTime

Property Name	Value
Description:	Time in UTC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.317. csp_TraceDisable

Disable database tracing.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_TraceDisable does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.318. csp_TraceEnable

Enable database tracing.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_TraceEnable does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.319. csp_TransferOptionCreate

Creates a new TransferOption object by inserting a new row into tbl_TransferOption.

Additional Information

The parameters @CallHandlerObjectId, @MediaSwitchObjectId, and @TransferTypeOption must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this transfer rule belongs.
Required	@TransferOptionType	In	inherit	nvarchar (64 characters)	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Optional	@Action	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Extension	In	inherit	nvarchar (40 characters)	The extension (phone number) to transfer to.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.
Optional	@RnaAction	In	inherit	smallint (2 bytes)	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.
Optional	@TimeExpires	In	inherit	datetime (8 bytes)	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disabled, the value is a past date.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransferAnnounce	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.
Optional	@TransferConfirm	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.
Optional	@TransferDtDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.
Optional	@TransferHoldingMode	In	inherit	smallint (2 bytes)	The action Cisco Unity Connection will take when the extension is busy.
Optional	@TransferIntroduce	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.
Optional	@TransferRings	In	inherit	smallint (2 bytes)	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Optional	@TransferScreening	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.
Optional	@TransferType	In	inherit	smallint (2 bytes)	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Optional	@UsePrimaryExtension	In	ignore	smallint (2 bytes)	Set to 1 (true) to indicate to use the subscriber or call handler primary extension

Exceptions

csp_TransferOptionCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId, @MediaSwitchObjectId, and @TransferOptionType) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@Action

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferRuleAction
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Action." If "tbl_TransferOption.Action" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this transfer rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.CallHandlerObjectId." If "tbl_TransferOption.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Extension

Property Name	Value
Description:	The extension (phone number) to transfer to.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Extension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Extension." If "tbl_TransferOption.Extension" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.MediaSwitchObjectId." If "tbl_TransferOption.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RnaAction

Property Name	Value
Description:	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.RnaAction
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallHandlerRNAAction
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.RnaAction." If "tbl_TransferOption.RnaAction" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@TimeExpires

Property Name	Value
Description:	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disable, the value is a past date.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TimeExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TimeExpires." If "tbl_TransferOption.TimeExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransferAnnounce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferAnnounce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferAnnounce." If "tbl_TransferOption.TransferAnnounce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferConfirm

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferConfirm
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferConfirm." If "tbl_TransferOption.TransferConfirm" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferDtDetect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferDtDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferDtDetect." If "tbl_TransferOption.TransferDtDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferHoldingMode

Property Name	Value
Description:	The action Cisco Unity Connection will take when the extension is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferHoldingMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallHandlerHoldMode
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferHoldingMode." If "tbl_TransferOption.TransferHoldingMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferIntroduce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferIntroduce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferIntroduce." If "tbl_TransferOption.TransferIntroduce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferOptionType

Property Name	Value
Description:	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferOptionType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TransferRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferOptionType." If "tbl_TransferOption.TransferOptionType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransferRings

Property Name	Value
Description:	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferRings." If "tbl_TransferOption.TransferRings" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferScreening

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferScreening
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferScreening." If "tbl_TransferOption.TransferScreening" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferType

Property Name	Value
Description:	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_TransferOption.TransferType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferType
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferType." If "tbl_TransferOption.TransferType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UsePrimaryExtension

Property Name	Value
Description:	Set to 1 (true) to indicate to use the subscriber or call handler primary extension
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.320. csp_TransferOptionDelete

Deletes a TransferOption object from tbl_TransferOption as specified by the combination of the @CallHandlerObjectId and @TransferOptionType parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this transfer rule belongs.
Required	@TransferOptionType	In	inherit	nvarchar (64 characters)	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_TransferOptionDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId and @TransferOptionType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified TransferOption object was not found. The names of the object (Transfer option), table (tbl_TransferOption), and columns (CallHandlerObjectId and TransferOptionType) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_TransferOptionType), and the columns (CallHandlerObjectId and TransferOptionType) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this transfer rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.CallHandlerObjectId." If "tbl_TransferOption.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferOptionType

Property Name	Value
Description:	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferOptionType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TransferRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferOptionType." If "tbl_TransferOption.TransferOptionType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.321. csp_TransferOptionModify

Updates the attributes of a TransferOption object based on the values passed in via the parameters. The @CallHandlerObjectId and @TransferOptionType parameters identify the TransferOption object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this transfer rule belongs.
Required	@TransferOptionType	In	inherit	nvarchar (64 characters)	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Optional	@Action	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Expired	In	ignore	smallint (2 bytes)	Enables or disables the transfer option.
Optional	@Extension	In	inherit	nvarchar (40 characters)	The extension (phone number) to transfer to.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.
Optional	@RnaAction	In	inherit	smallint (2 bytes)	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TimeExpires	In	inherit	datetime (8 bytes)	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disabled, the value is a past date.
Optional	@TransferAnnounce	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.
Optional	@TransferConfirm	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.
Optional	@TransferDtDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.
Optional	@TransferHoldingMode	In	inherit	smallint (2 bytes)	The action Cisco Unity Connection will take when the extension is busy.
Optional	@TransferIntroduce	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.
Optional	@TransferRings	In	inherit	smallint (2 bytes)	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Optional	@TransferScreening	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.
Optional	@TransferType	In	inherit	smallint (2 bytes)	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Optional	@UsePrimaryExtension	In	ignore	smallint (2 bytes)	Set to 1 (true) to indicate to inherit the subscriber or call handlers extension.

Exceptions

csp_TransferOptionModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId and @TransferOptionType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified TransferOption object was not found. The names of the object (Transfer option), table (tbl_TransferOption), and columns (CallHandlerObjectId and TransferOptionType) are included with the exception message.
1310	EXCEPTION_RESTRICTION_VIOLATION	The extension violated the Default Transfer restriction.

Parameter Properties

@Action

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferRuleAction
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Action." If "tbl_TransferOption.Action" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this transfer rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.CallHandlerObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.CallHandlerObjectId." If "tbl_TransferOption.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Expired

Property Name	Value
Description:	Enables or disables the transfer option.
Notes:	Set to 1 (true) to expire the transfer option and to 0 (false) to un-expire the transfer option.
Business Rules:	
Developer Notes:	Setting this parameter to 1 causes TimeExpires to be set to a Jan 1, 1972. Setting it to 0 causes TimeExpires to be NULL.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Extension

Property Name	Value
Description:	The extension (phone number) to transfer to.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Extension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)

Property Name	Value
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Extension." If "tbl_TransferOption.Extension" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.MediaSwitchObjectId." If "tbl_TransferOption.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RnaAction

Property Name	Value
Description:	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.RnaAction
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallHandlerRNAAction

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.RnaAction." If "tbl_TransferOption.RnaAction" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@TimeExpires

Property Name	Value
Description:	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disable, the value is a past date.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TimeExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TimeExpires." If "tbl_TransferOption.TimeExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransferAnnounce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferAnnounce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferAnnounce." If "tbl_TransferOption.TransferAnnounce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferConfirm

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferConfirm
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferConfirm." If "tbl_TransferOption.TransferConfirm" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferDtDetect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferDtDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferDtDetect." If "tbl_TransferOption.TransferDtDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferHoldingMode

Property Name	Value
Description:	The action Cisco Unity Connection will take when the extension is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferHoldingMode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallHandlerHoldMode
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferHoldingMode." If "tbl_TransferOption.TransferHoldingMode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferIntroduce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferIntroduce
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferIntroduce." If "tbl_TransferOption.TransferIntroduce" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferOptionType

Property Name	Value
Description:	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferOptionType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TransferRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferOptionType." If "tbl_TransferOption.TransferOptionType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferRings

Property Name	Value
Description:	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferRings." If "tbl_TransferOption.TransferRings" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferScreening

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferScreening
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferScreening." If "tbl_TransferOption.TransferScreening" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TransferType

Property Name	Value
Description:	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferType
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferType." If "tbl_TransferOption.TransferType" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@UsePrimaryExtension

Property Name	Value
Description:	Set to 1 (true) to indicate to inherit the subscriber or call handlers extension.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.322. csp_UserCreate

Creates a new User account from a user template by inserting a new row into tbl_User.

Additional Information

The parameter @Alias must be provided.

A User must be created from a template.

In addition to creating a new User object in tbl_User, this procedure also creates several User related objects:

- * An Alias object is created in the tbl_Alias table by calling csp_AliasCreate.
- * Based on the template used to create the user, a new Credential object is created for this user by inserting a new row into tbl_Credential.
- * The default credentials are added to the credential history by calling csp_private_UserCredentialHistoryCreate, which inserts a row into tbl_UserCredentialHistory.
- * The User is added as a member (new row inserted into tbl_DistributionListMember) to the DistributionList associated with the template.
- * Based on the template used to create the user, a new Policy is created for this user by inserting a new row into tbl_Policy.
- * A mailbox can also be created and assigned to the newly created user account by specifying a valid @MailboxStoreObjectId parameter. If the parameter includes a valid MailboxStoreObjectId, the ID of the mailbox (either newly created or associated if @MailboxId contains an ID for an existing mailbox) is returned in @MailboxId.
- * If the parameter @LocationObjectId contains NULL, the LocationObjectId column is set to the default location. Otherwise the LocationObjectId is set to the value contained in @LocationObjectId.
- * If the parameter @VoiceName contains a value other than NULL, a StreamFile object is created with the value of tbl_StreamFile.FileName = @VoiceName. If this value is specified, it must be a filename that was allocated using csp_AllocateVoiceFile. If not specified, a filename will be generated.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CcmId	In	inherit	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Optional	@CcmIdType	In	inherit	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EmployeeId	In	inherit	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Optional	@EnhancedSecurityAliases	In	inherit	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Optional	@Initials	In	inherit	nvarchar (12 characters)	The initial letters of some or all of the names of this user.
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxId	Out	inherit	nvarchar (110 characters)	If @MailboxStoreObjectId is specified, the ID of the new mailbox is returned in this parameter.
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	Specify this value to have a mailbox created and assigned to this user account.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtpAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtpAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@NoLicenseCheck	In	explicit-withdefault	smallint (2 bytes)	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Optional	@ObjectId	Out	inherit	char (36 characters)	The unique identifier (ObjectId) of the newly created user.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TemplateAlias	In	ignore	nvarchar (64 characters)	
Optional	@TemplateObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Title	In	inherit	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice filename for this user.

Exceptions

csp_UserCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are four conditions that can cause an Object Not Found exception to be thrown: 1. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. A Default Location was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. (This check is made only when @LocationObjectId is passed in with a value of NULL.) 3. The specified MailboxStore object was not found. The names of the object (Mailbox store), view (vw_MailboxStoreMap), and column (ObjectId) are included with the exception message. 4. The specified Mailbox object was not found. The names of the object (Mailbox/Mailbox store), table (tbl_MailboxMap), and columns (MailboxId, MailboxStoreObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user template object as specified by @TemplateObjectId was not found. The names of the object (template), parameter (@TemplateObjectId), table (tbl_User), and column (ObjecId) are included with the exception message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltFirstName." If "tbl_User.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltLastName." If "tbl_User.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmId." If "tbl_User.CcmId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmIdType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmIdType
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CcmIdType
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmIdType." If "tbl_User.CcmIdType" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmailAddress." If "tbl_User.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmployeeId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmployeeId." If "tbl_User.EmployeeId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EnhancedSecurityAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (50 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EnhancedSecurityAlias." If "tbl_User.EnhancedSecurityAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.FirstName." If "tbl_User.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.Initials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Initials." If "tbl_User.Initials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LastName

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.LastName." If "tbl_User.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.LocationObjectId." If "tbl_User.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	If @MailboxStoreObjectId is specified, the ID of the new mailbox is returned in this parameter.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	Specify this value to have a mailbox created and assigned to this user account.
Notes:	This will cause a cross-database call to be made to the UnityMbx database to create a mailbox and assign it to this user account.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character '.' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Disables license checking in this procedure. Set to 1 to prevent license checks from being performed in this procedure.
Notes:	The default is 0 so that license check do occur - this is normally the desired behavior, since otherwise license violations will be caught later. The license checks in this procedure are "soft checks", designed to alert administrators but not to be relied upon for enforcement. It may be desirable at times to override the checks, such as when licenses are going to be purchased in the very near future but the subscriber additions need to be made immediately.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The unique identifier (ObjectId) of the newly created user.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRToSender." If "tbl_User.RouteNDRToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateAlias

Property Name	Value
Description:	
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

@TemplateObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for this UserTemplate object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Title
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Title." If "tbl_User.Title" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	Voice filename for this user.
Notes:	If this value is specified, it must be a filename that was allocated using csp_AllocateVoiceFile. If not specified, a filename will be generated.
Business Rules:	
Developer Notes:	See csp_AllocateVoiceFile for more information.
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.323. csp_UserDelete

Deletes a User object from tbl_User as specified by the @ObjectId parameter.

Additional Information

This stored procedure can be used to delete a subscriber or any other kind of user.

An optional parameter is the @ReplacementUser. If passed in, any references to this user will be replaced by this user.

This procedure checks to ensure that a user is not attempting to delete themselves. If the user being deleted has administrative privileges, this procedure checks to ensure that the current user has the privilege to delete a user with administrative privileges.

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the user.

In addition to deleting the specified User object from tbl_User, this procedure also removes several other objects related to a user:

- * The associated Alias row in tbl_Alias is deleted.
- * The user's credentials are deleted from tbl_Credential.
- * The user's membership in distribution lists is removed by deleting the associated rows from tbl_DistributionListMember.
- * If the user is also a subscriber, the subscriber related properties are also removed: subscriber's primary call handler (and its related sub-objects such as Greetings) and DtmfAccessId are deleted, any PersonalRuleCaller objects associated with the subscriber are deleted, and membership in any personal groups (tbl_PersonalGroupMember) is removed.
- * If the user has a mailbox or is mapped to a mailbox, the mapping and the mailbox are deleted.
- * If the user owns any personal rule sets, personal destination groups or personal destinations, they are deleted.
- * If the user has a recorded voice name, the associated row in tbl_StreamFile is deleted.
- * If the user is a subscriber, the associated row in tbl_UserSubscriber is deleted.

Business Rules

At least one active user account must be assigned the role of a VMS Administrator (K1 requirement). At least one active user account must be assigned the role of a Unity Organization Administrator (K2 requirement).

Before deleting a user account, a check must be made to insure that at least one active user account remains that is assigned the role and privileges of a VMS Administrator and at least one account remains that is assigned the role and privileges of a Unity Organization Administrator. If the user account that is targeted for deletion is the sole user account associated with the role of a VMS Administrator or Unity Organization Administrator, the user account must not be deleted until another active user account is assigned the particular administrative role. An 'active account' is an account that is not locked and fully operational.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the User to delete.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ReplacementUserObjectId	In	ignore	char (36 characters)	Any references to user being deleted will be replaced with this user.

Exceptions

csp_UserDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid User as specified by @ObjectId was not found. The names of the object (user), parameter (@ObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1016	EXCEPTION_OBJECT_UNDELETABLE	The User specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (user) and table (tbl_User), are included with the exception message.
1309	EXCEPTION_USER_CANNOT_DELETE_SELF	Users cannot be deleted by themselves.
1312	EXCEPTION_USER_IS_ONLY_SYSADMIN	The user cannot be deleted because there are no other users assigned to the System Administrator role.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the User to delete.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReplacementUserId

Property Name	Value
Description:	Any references to user being deleted will be replaced with this user.
Notes:	This is an optional parameter. By default, no replacements will be made and the delete will fail if there are any references.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.324. csp_UserModify

Updates the attributes of a User account based on the values passed in via the parameters. The @ObjectId identifies the User object in tbl_User that is updated.

Additional Information

This procedure can be used to modify basic User attributes of any kind of user, including Subscribers. It can also be used to add a mailbox to a user or add a recorded voice name.

A check is made of the read-only flag. If it is set, the specified user cannot be updated.

If a new COS is specified, a check will be made to determine if any new features are being added, and if so, ensure that sufficient number of licenses exist.

DTMF names are not regenerated (for performance reasons) unless specified.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the user to modify.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CcmId	In	inherit	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Optional	@CcmIdType	In	inherit	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	ignore	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EmailAddress	In	inherit	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.
Optional	@EmployeeId	In	inherit	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Optional	@EnhancedSecurityAliases	In	inherit	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Initials	In	inherit	nvarchar (12 characters)	The initial letters of some or all of the names of this user.
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtetAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtetAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@NoLicenseCheck	In	explicit	smallint (2 bytes)	Set to 1 to prevent license checking
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Title	In	inherit	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this user.

Exceptions

csp_UserModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MailboxStore object was not found. The names of the object (Mailbox store), view (vw_MailboxStoreMap), and column (ObjectId) are included with the exception message. 2. The specified Mailbox object was not found. The names of the object (Mailbox/Mailbox store), table (tbl_MailboxMap), and columns (MailboxId, MailboxStoreObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid User as specified by @ObjectId was not found. The names of the object (user), parameter (@ObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1015	EXCEPTION_OBJECT_READONLY	The User specified by @ObjectId cannot be updated because it's read-only attribute is set. The name of the object (user) and table (tbl_User) are included with the message.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltFirstName." If "tbl_User.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltLastName." If "tbl_User.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmId." If "tbl_User.CcmId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmldType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CcmldType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CcmldType
Null Handling:	Inherit - inherit parameter value from "tbl_User.CcmldType." If "tbl_User.CcmldType" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EmailAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmailAddress." If "tbl_User.EmailAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_User.EmployeeId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EmployeeId." If "tbl_User.EmployeeId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.EnhancedSecurityAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (50 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.EnhancedSecurityAlias." If "tbl_User.EnhancedSecurityAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.FirstName." If "tbl_User.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Initials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Initials." If "tbl_User.Initials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.LastName." If "tbl_User.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character '.' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Set to 1 to prevent license checking
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The unique identifier of the user to modify.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRTToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRTToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRTToSender." If "tbl_User.RouteNDRTToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Title
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Title." If "tbl_User.Title" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this user.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.325. csp_UserModifyName

Updates a subset of the attributes (name attributes only) of a User object based on the values passed in via the parameters. The @ObjectId parameter identifies the User object that is updated.

This offers a subset of the UserModify procedure whereby only the name elements of a user may be modified. It is restricted in scope so it may be assigned to a finer-grained privilege that allows only name updates on users.

Additional Information

This procedure executes csp_UserModify, which performs the actual update of the specified row in tbl_User. It also updates the recorded voice name (stream file), if the @VoiceName parameter is provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Initials	In	inherit	nvarchar (12 characters)	The initial letters of some or all of the names of this user.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Optional	@VoiceName	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

csp_UserModifyName will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A User object matching the value of @ObjectId and IsTemplate = false was not found. The names of the object (user), parameter (@ObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1015	EXCEPTION_OBJECT_READONLY	The User specified by @ObjectId cannot be updated because it's read-only attribute is set. The name of the object (user) and table (tbl_User) are included with the message.

Parameter Properties

@AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltFirstName." If "tbl_User.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_User.AltLastName." If "tbl_User.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.FirstName." If "tbl_User.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Initials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Initials." If "tbl_User.Initials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_User.LastName." If "tbl_User.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.326. csp_UserTemplateCreate

Creates a new User template by inserting a new row into tbl_User and tbl_UserTemplate.

Additional Information

The parameter @Alias must be provided.

A user template may be created from another user template.

In addition to creating a new User object in tbl_User, this procedure also creates a few user template related objects:

- * An Alias object is created in the tbl_Alias table by calling csp_AliasCreate.
- * Two new Credential objects are created for this template by inserting two new rows into tbl_Credential. The credentials are random password and PIN using the MinLength setting from the CredentialPolicy.
- * A policy is created for the template by inserting a new row into tbl_Policy.
- * The user template is added as a member (new row inserted into tbl_DistributionListMember) to the DistributionList associated with the template.
- * If the parameter @LocationObjectId contains NULL, the LocationObjectId column is set to the default location. Otherwise the LocationObjectId is set to the value contained in @LocationObjectId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DisplayNameRule	In	inherit	smallint (2 bytes)	The format for generating the user display name.
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct SMTP address (the part of the address before the @ sign).
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MessageAgingPolicy ObjectId	In	inherit	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Optional	@NotificationType	In	inherit	smallint (2 bytes)	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Optional	@ObjectId	Out	inherit	char (36 characters)	ID of the new template
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@ReceiveQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SendQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) send limit.
Optional	@SendReadReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TemplateAlias	In	ignore	nvarchar (64 characters)	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Optional	@TemplateObjectId	In	ignore	char (36 characters)	The unique identifier of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Indicates whether the user will inherit language from the Location to which it belongs. Set this to 1 to have the user inherit language from their Location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Indicates whether the user will inherit the timezone of the Location from which they belong. Set this to 1 to have the user inherit timezone from their location.
Optional	@WarningQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) warning limit.

Exceptions

csp_UserTemplateCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. A Default Location was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. (This check is made only when @LocationObjectId is passed in with a value of NULL.)
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user template object as specified by @TemplateObjectId was not found. The names of the object (template), parameter (@TemplateObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1144	EXCEPTION_QUOTA_PARAMETER_CONSTRAINT_VIOLATION	The specified warning, send, or receive quota value is invalid. The warning value must be less than or equal to the send value. The send value must be less than or equal to the receive value.

Error #	Name	Description
1145	EXCEPTION_QUOTA_PARAMETER_INVALID	The specified warning, send, or receive quota value is invalid. Quota values must be greater than -1.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.CantChange." If "tbl_UserTemplate.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameRule

Property Name	Value
Description:	The format for generating the user display name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DisplayNameRule
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DisplayNameRule." If "tbl_UserTemplate.DisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DoesntExpire." If "tbl_UserTemplate.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.LocationObjectId." If "tbl_User.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MailboxStoreObjectId." If "tbl_UserTemplate.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct SMTP address (the part of the address before the @ sign).
Notes:	This is optional, and is only needed for Unicode Alias that cannot be converted into a valid SMTP address.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MessageAgingPolicyObjectId." If "tbl_UserTemplate.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.NotificationType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NotificationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.NotificationType." If "tbl_UserTemplate.NotificationType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	ID of the new template
Notes:	Generated internally
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ReceiveQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ReceiveQuota." If "tbl_UserTemplate.ReceiveQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRToSender." If "tbl_User.RouteNDRToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendQuota." If "tbl_UserTemplate.SendQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendReadReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendReadReceipts." If "tbl_UserTemplate.SendReadReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateAlias

Property Name	Value
Description:	The alias of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Notes:	The alias is recognizable in the native language and character set of the system, e.g. Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI client name lookup purposes.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TemplateObjectId

Property Name	Value
Description:	The unique identifier of an existing user template (typically one of the default user templates supplied with the system) on which the creation of this new template shall be based.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Indicates whether the use will inherit language from the Location to which it belongs. Set this to 1 to have the user inherit language from their Location.
Notes:	See vw_User.UseDefaultLanguage for more information.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Indicates whether the user will inherit the timezone of the Location from which they belong. Set this to 1 to have the user inherit timezone from their location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.WarningQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.WarningQuota." If "tbl_UserTemplate.WarningQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

6.327. csp_UserTemplateDelete

Deletes a User template from tbl_User and tbl_UserTemplate as specified by the @ObjectId parameter.

Additional Information

This procedure can also be used to delete Subscriber templates.

In addition to deleting the specified User object from tbl_User and tbl_UserTemplate, this procedure also removes several other objects related to a user or subscriber template:

- * The Alias associated with this template is removed from tbl_Alias.
- * The credentials associated with this template are deleted from tbl_Credential.
- * The Policy associated with this template is deleted from tbl_Policy.
- * If this template is a Subscriber template, the subscriber portion of the template is removed from tbl_UserSubscriber.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the user template to delete.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_UserTemplateDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user template object was not found. The names of the object (template), parameter (@TemplateObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the user template to delete.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.328. csp_UserTemplateModify

Updates the attributes of a User template based on the values passed in via the parameters. The @ObjectId identifies the User object in tbl_User and tbl_UserTemplate that is updated.

Additional Information

This procedure can be used to modify the UserTemplate attributes of any kind of User Template, including Subscriber Templates.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the user template to update.
Optional	@Address	In	inherit	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BillingId	In	inherit	nvarchar (32 characters)	Accounting information or project code associated with this user.
Optional	@Building	In	inherit	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Optional	@City	In	inherit	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Optional	@CosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Optional	@Country	In	inherit	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Department	In	inherit	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DisplayNameRule	In	inherit	smallint (2 bytes)	The format for generating the user display name.
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Optional	@Language	In	inherit	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Optional	@MailboxDn	In	inherit	lvarchar (392 characters)	The distinguished name of the mailbox.
Optional	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct SMTP address (the part of the address before the @ sign).
Optional	@Manager	In	inherit	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.
Optional	@MessageAgingPolicy ObjectId	In	inherit	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@NotificationType	In	inherit	smallint (2 bytes)	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Optional	@PabLastImported	In	inherit	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Optional	@PostalCode	In	inherit	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.
Optional	@ReceiveQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@RouteNDRToSender	In	inherit	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Optional	@SendQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) send limit.
Optional	@SendReadReceipts	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Optional	@State	In	inherit	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.
Optional	@TimeZone	In	inherit	int (4 bytes)	The time zone to which this user account is associated.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the user inherit timezone from location.
Optional	@WarningQuota	In	inherit	int (4 bytes)	The mailbox size (in bytes) warning limit.

Exceptions

csp_UserTemplateModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user template object was not found. The names of the object (template), parameter (@TemplateObjectId), table (tbl_User), and column (ObjectId) are included with the exception message.
1144	EXCEPTION_QUOTA_PARAMETER_CONSTRAINT_VIOLATION	The specified warning, send, or receive quota value is invalid. The warning value must be less than or equal to the send value. The send value must be less than or equal to the receive value.
1145	EXCEPTION_QUOTA_PARAMETER_INVALID	The specified warning, send, or receive quota value is invalid. Quota values must be greater than -1.

Parameter Properties

@Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Address." If "tbl_User.Address" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.BillingId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.BillingId." If "tbl_User.BillingId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Building
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_User.Building." If "tbl_User.Building" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.CantChange." If "tbl_UserTemplate.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.City
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.City." If "tbl_User.City" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.CosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.CosObjectId." If "tbl_User.CosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Country
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (2 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Country." If "tbl_User.Country" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Department
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Department." If "tbl_User.Department" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_User.DirectoryId." If "tbl_User.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_User.DisplayName." If "tbl_User.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayNameRule

Property Name	Value
Description:	The format for generating the user display name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	DisplayNameRule
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DisplayNameRule." If "tbl_UserTemplate.DisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.DoesntExpire." If "tbl_UserTemplate.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_User.Language." If "tbl_User.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_User.MailboxDn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (392 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.MailboxDn." If "tbl_User.MailboxDn" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MailboxStoreObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MailboxStoreObjectId." If "tbl_UserTemplate.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct SMTP address (the part of the address before the @ sign).
Notes:	This is optional, and is only needed for Unicode Alias that cannot be converted into a valid SMTP address.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Manager
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.Manager." If "tbl_User.Manager" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.MessageAgingPolicyObjectId." If "tbl_UserTemplate.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.NotificationType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	NotificationType
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.NotificationType." If "tbl_UserTemplate.NotificationType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The unique identifier of the user template to update.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ObjectId." If "tbl_UserTemplate.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PabLastImported
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PabLastImported." If "tbl_User.PabLastImported" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.PostalCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.PostalCode." If "tbl_User.PostalCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.ReadOnly." If "tbl_User.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.ReceiveQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.ReceiveQuota." If "tbl_UserTemplate.ReceiveQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.RouteNDRTToSender
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.RouteNDRTToSender." If "tbl_User.RouteNDRTToSender" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendQuota." If "tbl_UserTemplate.SendQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In
Update Column Value From Parameter:	True

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.SendReadReceipts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.SendReadReceipts." If "tbl_UserTemplate.SendReadReceipts" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.State
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.State." If "tbl_User.State" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_User.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_User.TimeZone." If "tbl_User.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_User.Undeletable." If "tbl_User.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the user inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the user inherit timezone from location.
Notes:	See vw_User.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserTemplate.WarningQuota
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_UserTemplate.WarningQuota." If "tbl_UserTemplate.WarningQuota" can be NULL, then explicit NULL is allowed.
Default Value:	-2
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

6.329. csp_VirtualContactCreate

Creates a virtual contact representing a VPIM user in a remote mail system by inserting a new row into tbl_Contact. In addition to creating a new Contact object, this procedure also creates an Alias object in the tbl_Alias table by calling csp_AliasCreate.

Additional Information

The @Alias and @DisplayName parameters are set to be a combination of the location Dialing Domain and the Remote Mail Address.

If @LocationObjectId is not provided or is NULL, it is set to the objectid of the primary LocationVMS.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DeliveryLocationObjectId	In	inherit	char (36 characters)	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Required	@RemoteAddress	In	inherit	lvarchar (256 characters)	A mail address on the remote system.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object.

Exceptions

csp_VirtualContactCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1004	EXCEPTION_OBJECT_NOTFOUND	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DeliveryLocationObjectld

Property Name	Value
Description:	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DeliveryLocationObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DeliveryLocationObjectId." If "tbl_Contact.DeliveryLocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ObjectId." If "tbl_Contact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RemoteAddress

Property Name	Value
Description:	A mail address on the remote system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.RemoteAddress
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.RemoteAddress." If "tbl_Contact.RemoteAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.330. csp_VMSServerCreate

Creates a new VMSServer object by inserting a new row into tbl_VMSServer. A VMSServer object consists of the information for each server in the Virtual Messaging System (VMS) that the SRM needs to manage the servers in the VMS.

Additional Information

The parameters @Name and @VmsTemplateObjectId must be provided.

This procedure also inserts five rows into tbl_IPPortReservation, which reserves the following TCP/IP ports:

SIP/PIMG call control: 5060-5300

RTP/RTCP SCCP: 24576-32768

RTP/RTCP ASR: 32784-33084

RTP/RTCP TTS: 33184-33484

RTP/RTCP SIP/PIMG voice: 22800-24575

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Name	In	inherit	nvarchar (64 characters)	The name of the server.
Required	@VmsTemplateObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSTemplate object that defines the roles that run on this server.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IpAddress	In	inherit	varchar (40 characters)	The IP address of the server.
Optional	@MaximumTelephonyPorts	In	inherit	smallint (2 bytes)	Maximum allowed telephony ports in system.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.

Exceptions

csp_VMSServerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Name and @VMSTemplateObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IpAddress

Property Name	Value
Description:	The IP address of the server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.IpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	IPAddress
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.IpAddress." If "tbl_VMSServer.IpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MaximumTelephonyPorts

Property Name	Value
Description:	Maximum allowed telephony ports in system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.MaximumTelephonyPorts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.MaximumTelephonyPorts." If "tbl_VMSServer.MaximumTelephonyPorts" can be NULL, then explicit NULL is allowed.
Default Value:	144
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The name of the server.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.Name
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.Name." If "tbl_VMSServer.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.ObjectId." If "tbl_VMSServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@VmsTemplateObjectId

Property Name	Value
Description:	The unique identifier of the VMSTemplate object that defines the roles that run on this server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.VmsTemplateObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.VmsTemplateObjectId." If "tbl_VMSServer.VmsTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.331. csp_VMSServerDelete

Deletes a VMSServer object from tbl_VMSServer as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_VMSServerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The VMSServer object specified by @ObjectId was not found. The names of the object (VMS server), table (tbl_VMSServer), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_VMSServer), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.ObjectId." If "tbl_VMSServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.332. csp_VMSServerModify

Updates the attributes of a VMSServer object based on the values passed in via the parameters. The @ObjectId parameter identifies the VMSServer object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IpAddress	In	inherit	varchar (40 characters)	The IP address of the server.
Optional	@MaximumTelephonyPorts	In	inherit	smallint (2 bytes)	Maximum allowed telephony ports in system.
Optional	@Name	In	inherit	nvarchar (64 characters)	The name of the server.

Exceptions

csp_VMSServerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The VMSServer object specified by @ObjectId was not found. The names of the object (VMS server), table (tbl_VMSServer), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IpAddress

Property Name	Value
Description:	The IP address of the server.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.IpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	IPAddress
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.IpAddress." If "tbl_VMSServer.IpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MaximumTelephonyPorts

Property Name	Value
Description:	Maximum allowed telephony ports in system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.MaximumTelephonyPorts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.MaximumTelephonyPorts." If "tbl_VMSServer.MaximumTelephonyPorts" can be NULL, then explicit NULL is allowed.
Default Value:	144
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The name of the server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.Name

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.Name." If "tbl_VMSServer.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_VMSServer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_VMSServer.ObjectId." If "tbl_VMSServer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

Chapter 7. Functions

7.1. fn_AvoidDefaultCredentials

Parameters

Name	SQL Data Type/Length	Description
@Credentials	varchar (254 characters)	
@RETURN_VALUE	varchar (254 characters)	
@strCredentials	nvarchar (128 characters)	

Additional Information

7.2. fn_AvoidDefaultFloat

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	float (8 bytes)	
@Val1	float (8 bytes)	
@Val2	float (8 bytes)	

Additional Information

7.3. fn_AvoidDefaultInt

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	int (4 bytes)	
@Val1	int (4 bytes)	
@Val2	int (4 bytes)	

Additional Information

7.4. fn_AvoidDefaultSmallInt

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	smallint (2 bytes)	
@Val1	smallint (2 bytes)	
@Val2	smallint (2 bytes)	

Additional Information

7.5. fn_AvoidDefaultStr

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	lvarchar (1024 characters)	
@Val1	lvarchar (1024 characters)	
@Val2	lvarchar (1024 characters)	

Additional Information

7.6. fn_AvoidDefaultTime

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	datetime (8 bytes)	
@Val1	datetime (8 bytes)	
@Val2	datetime (8 bytes)	

Additional Information

7.7. fn_AvoidDefaultUid

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	char (36 characters)	
@Val1	char (36 characters)	
@Val2	char (36 characters)	

Additional Information

7.8. fn_AvoidNull

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	lvarchar (512 characters)	
@Val1	lvarchar (512 characters)	
@Val2	lvarchar (512 characters)	

Additional Information

7.9. fn_AvoidNullBin

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	varchar (254 characters)	
@Val1	varchar (254 characters)	
@Val2	varchar (254 characters)	

Additional Information

7.10. fn_AvoidNullInt

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	int (4 bytes)	
@Val1	int (4 bytes)	
@Val2	int (4 bytes)	

Additional Information

7.11. fn_EncryptCredential

This functions take a plain text credential and hashes it using SHA1.

Parameters

Name	SQL Data Type/Length	Description
@Credentials	varchar (254 characters)	
@EncryptionType	int (4 bytes)	
@RETURN_VALUE	varchar (254 characters)	
@UserObjectId	char (36 characters)	

Additional Information

7.12. fn_GetConfigNodeId

Returns the ObjectId of a node given a combination of Name/FullName/ParentFullName/ParentObjectId

Parameters

Name	SQL Data Type/Length	Description
@FullName	lvarchar (512 characters)	
@Name	lvarchar (256 characters)	
@ParentFullName	lvarchar (512 characters)	
@ParentId	char (36 characters)	
@RETURN_VALUE	char (36 characters)	

Additional Information

7.13. fn_GetDefaultLanguage

Parameters

Name	SQL Data Type/Length	Description
@RETURN_VALUE	int (4 bytes)	

Additional Information

7.14. fn_GetSearchablePhoneNumber

Given a phone number, this returns a searchable version of it by removing formatting.

Parameters

Name	SQL Data Type/Length	Description
@PhoneNumber	varchar (255 characters)	
@RETURN_VALUE	varchar (255 characters)	

Additional Information

7.15. fn_HasChildNodes

Returns whether or not a node had any child nodes.

Parameters

Name	SQL Data Type/Length	Description
@ObjectId	char (36 characters)	
@RETURN_VALUE	smallint (2 bytes)	

Additional Information

User internally by a view (vw_configuration)

7.16. fn_local_to_utc

Parameters

Name	SQL Data Type/Length	Description
@dt	datetime (8 bytes)	
@RETURN_VALUE	datetime (8 bytes)	
@timeZoneID	int (4 bytes)	

Additional Information

7.17. fn_utc_to_local

Parameters

Name	SQL Data Type/Length	Description
@dt	datetime (8 bytes)	
@RETURN_VALUE	datetime (8 bytes)	
@timeZoneID	int (4 bytes)	

Additional Information

Chapter 8. Exceptions

This chapter describes user-defined error messages (exceptions).

8.1. 1002 - EXCEPTION_PARAMETER_NULL_REQUIRED

Error Number

1002

Description

Required parameter cannot be NULL.

Message

Required parameter cannot be NULL. Parameter = [%s]

Notes

This is for a required parameter that is set to NULL.

Replaces 50303.

8.2. 1003 - EXCEPTION_PARAMETER_INVALID

Error Number

1003

Description

Invalid parameter.

Message

Invalid parameter. Parameter = [%s], Value = [%s]

Notes

This is a generic message for an invalid parameter.

Replaces 50101, 50102, 50111, 50106, 50102, 50110, 50105, 50103, 50104, 50115, 50107, 50113, and 50108

8.3. 1004 - EXCEPTION_OBJECT_NOTFOUND

Error Number

1004

Description

Object not found.

Message

Object not found. Object = [%s], Table = [%s], Column = [%s]

Notes

A generic message when an object is not found.

Replaces 50305

8.4. 1005 - EXCEPTION_OBJECT_NOTFOUND_NOTTYPE

Error Number

1005

Description

Object not found or the object is not the correct type.

Message

Object not found or is not a %s: Parameter = [%s], Table = [%s], Column = [%s]

Notes

Generic message when an object is not found or not of a particular type.

Replaces 50305

8.5. 1006 - EXCEPTION_SPECIAL_INTERNAL

Error Number

1006

Description

Internal SQL error.

Message

Internal SQL error. Operation = [%s]

Notes

Occurs when there is an internal SQL error.

Replaces 50109

8.6. 1007 - EXCEPTION_OBJECT_ALREADY_BELONG

Error Number

1007

Description

An object already belongs to another object.

Message

%s already belongs to %s

Notes

Replaces 50001 and 50114

8.7. 1008 - EXCEPTION_OBJECT_INUSE

Error Number

1008

Description

Operation cannot be completed because the target object is in use.

Message

Operation cannot be done because the object is in use. Operation = [%s], Table = [%s], Column = [%s]

Notes

Replaces 50112

8.8. 1009 - EXCEP- TION_SPECIAL_NODETYPE_MISMATCH

Error Number

1009

Description

Cannot modify a node that is not this type.

Message

Cannot modify a node that is not this type. Type = [%s]

Notes

A special exception when a configuration node of the wrong type is modified.

Replaces 50116

8.9. 1010 - EXCEPTION_SPECIAL_NODE_DUPLICATE

Error Number

1010

Description

Duplicate configuration node.

Message

Duplicate configuration node. Column = [%s]

Notes

Used when a duplicate configuration node is found.

Replaces 50118. A CK can't take care of this since some processing needs to be done before a duplicate node can be checked for.

8.10. 1011 - EXCEP- TION_SPECIAL_MEDIADVICE_LIMITEXCEED

Error Number

1011

Description

Error creating a media port.

Message

%s exceeds maximum for the specified VMSServerObjectId

Notes

Special media port create exception.

Replaces hard coded item in csp_MediaPortCreate

8.11. 1012 - EXCEPTION_SPECIAL_VMSSERVERROLE_MATCHROLET TEMPLATE

Error Number

1012

Description

StartupState and ServerPriority match that of role template.

Message

Row %s: @StartupState and @ServerPriority match that of role template

Notes

Generated by csp_VMSServerRole create or modify when the @StartupState and @ServerPriority parameters match that of the role template associated with the server @VMSServerObjectId

8.12. 1013 - EXCEP- TION_MAX_TELEPHONY_PORTS_EXCEEDED

Error Number

1013

Description

Maximum number of telephony ports in system is exceeded.

Message

Maximum number of telephony ports in system exceeded.

Notes

8.13. 1014 - EXCEPTION_MEDIA_ENCRYPTION_ATTRIBUTE_MAXSIZE_EXCEEDED

Error Number

1014

Description

One of the media encryption type attributes exceeds the maximum of 8000 bytes.

Message

An encryption type attribute exceeds the maximum of 8k bytes. Table=[%s], Column=[%s]

Notes

Thrown by tr_MediaPort_Insert and tr_MediaPort_Update

8.14. 1015 - EXCEPTION_OBJECT_READONLY

Error Number

1015

Description

Object is read only.

Message

Object is read only. Object = [%s], Table = [%s]

Notes

A generic message when an object cannot be changed or updated.

8.15. 1016 - EXCEPTION_OBJECT_UNDELETABLE

Error Number

1016

Description

Object is protected and may not be deleted.

Message

Object is undeletable. Object = [%s], Table = [%s]

Notes

A generic message when an object cannot be deleted. This exception would occur when attempting to delete a factory default object.

8.16. 1017 - EXCEPTION_ATTRIBUTE_READONLY

Error Number

1017

Description

Field is read only and cannot be updated.

Message

Attribute is read only. Table = [%s], Column = [%s]

Notes

Used by media triggers to protect referencial integrity of particular object attributes.

8.17. 1018 - EXCEPTION_MEDIA_REMOTESEVICEENUM_INVALID

Error Number

1018

Description

The MediaRemoteService cannot be assigned to a specific type of media port group.

Message

Remote service cannot be assigned to this type of media port group. [%s]

Notes

8.18. 1019 - EXCEP- TION_MEDIA_PIMG_REMOTESERVICE_MAXSERVICE S_EXCEEDED

Error Number

1019

Description

Only one PIMG MediaRemoteService may be assigned to a media port group.

Message

Only one PIMG MediaRemoteService may be assigned to a media port group.

Notes

8.19. 1020 - EXCEPTION_MEDIA_IPPORT_OUT_OF_RANGE

Error Number

1020

Description

IPPort is outside of the range reserved for this purpose or no range has been reserved.

Message

IPPort out of range. Table=[%s], Column=[%s]

Notes

8.20. 1021 - EXCEPTION_MEDIA_IPPORT_RANGE_OVERLAP

Error Number

1021

Description

Overlapping min/max port ranges on the same VMSServer are not permitted.

Message

Overlapping min/max port ranges. Table=[%s], Columns=[%s]

Notes

8.21. 1022 - EXCEPTION_MEDIA_SIPPORT_ASSIGNMENT_INVALID

Error Number

1022

Description

Assignment of SIP port to a port group is invalid.

Message

Invalid SIP port assignment. Table=[%s]

Notes

Two conditions can cause this exception:

1. SIP ports can only be assigned to port groups where TelephonyIntegrationMethodEnum is SIP or PIMG.
2. Can only assign one SIP port per VMSServer to a port group.

8.22. 1023 - EXCEP- TION_MEDIA_DUPLICATE_DEVICEID

Error Number

1023

Description

A device index or device id matching the specified device index or device id already exists on a VMS.

Message

Duplicate media device index or device id. Table = [%s], Column = [%s]

Notes

8.23. 1024 - EXCEPTION_AUTOLOGON_PHONENUMBER_DUPLICATE

Error Number

1024

Description

A duplicate phone number with AutoLogon set to true already exists.

Message

A duplicate phone number with AutoLogon set to true (1) already exists.

Notes

8.24. 1025 - EXCEPTION_LICENSE_VIOLATION

Error Number

1025

Description

The requested operation would result in a license violation.

Message

License violation: %s

Notes

License count violation - returned when the number of objects (Subscribers,Ports) would exceed the licensed maximum.

EXCEPTION_LICENSE_VIOLATION_FEATURE is returned if the number of subscribers for a licensed feature would be exceeded.

8.25. 1026 - EXCEP- TION_LICENSE_VIOLATION_FEATURE

Error Number

1026

Description

Number subscribers exceeds the allowed number for a licensed feature.

Message

Number subscribers exceeds the allowed number for a licensed feature: %s %s

Notes

This is returned for licensed feature violations.

8.26. 1027 - EXCEP- TION_CREDENTIAL_NUMERIC_CHECK_FAILED

Error Number

1027

Description

The credential must contain only digits.

Message

The credential must contain only digits.

Notes

This applies to PIN credentials only.

8.27. 1028 - EXCEPTION_CREDENTIAL_POLICY_NOTFOUND

Error Number

1028

Description

The credential policy was not found.

Message

The credential policy was not found: [%s]

Notes

8.28. 1029 - EXCEPTION_AGING_RULE_DISABLED

Error Number

1029

Description

The specified message aging rule is disabled.

Message

Aging Rule (%s) is disabled.

Notes

8.29. 1030 - EXCEPTION_NOT_AUTHORIZED

Error Number

1030

Description

User is not authorized to perform the requested operation.

Message

User is not authorized to perform the requested operation.

Notes

Returned from `csp_CredentialModify` if user is trying to set an administrative user's password without the privilege to do so.

8.30. 1031 - EXCEP- TION_NOTIFICATION_TOADDRESS_REQUIRED

Error Number

1031

Description

If a notification device is active, the attribute of the device that equates to the 'To' address, must contain a non-null value.

Message

The 'To' address for the active notification device must contain an address. To address parameter= [%s], Table= [%s], Column = [%s]

Notes

8.31. 1032 - EXCEPTION_AGING_POLICY_DISABLED

Error Number

1032

Description

The specified message aging policy is disabled.

Message

Aging Policy (%s) is disabled.

Notes

8.32. 1033 - EXCEP- TION_NOTIFICATIONMWI_INHERIT_EXTENSION_EXISTS

Error Number

1033

Description

A user can only have one MWI extension that is set to 'inherit from user extension.'

Message

A notification MWI extension set to inherit from this user extension already exists.

Notes

8.33. 1034 - EXCEPTION_NOTIFICATION_MEDIASWITCH_DOESNT_MATCH_MEDIAPORT

Error Number

1034

Description

If a MediaPort is specified for a notification mwi, the media switch associated with the media port must match the media switch associated with the notification mwi.

Message

The media switch associated with a media port does not match the media switch associated with the corresponding notification MWI.

Notes

BusinessRules

If MediaPortObjectId for a NotificationMwi is not NULL, it must be a child of the MediaSwitchObjectId

8.34. 1035 - EXCEPTION_OBJECT_INVALID_OWNER

Error Number

1035

Description

The user does not own the specified object.

Message

The %s does not belong to the user.

Notes

8.35. 1036 - EXCEPTION_INVALID_ROUTING_RULE_CONDITION

Error Number

1036

Description

The specified routing rule condition is not valid.

Message

The specified routing rule condition is not valid.

Notes

8.36. 1037 - EXCEP- TION_MAILSTORE_NOT_MOUNTED

Error Number

1037

Description

The specified mailstore is not currently mounted.

Message

The specified mailstore is not currently mounted.

Notes

8.37. 1038 - EXCEPTION_SWITCH_REF_SUBSCRIBER

Error Number

1038

Description

Phone system cannot be deleted because it is referenced by a user.

Message

Phone system could not be deleted because it is referenced by a user.

Notes

8.38. 1039 - EXCEP- TION_SWITCH_REF_SUBSCRIBER_TEMPLATE

Error Number

1039

Description

Phone system cannot be deleted because it is referenced by a user template.

Message

Phone system could not be deleted because it is referenced by a user template.

Notes

8.39. 1040 - EXCEPTION_SWITCH_REF_NOTIFICATION_PAGER

Error Number

1040

Description

Phone system cannot be deleted because it is referenced by a pager notification device on a user or user template.

Message

Phone system could not be deleted because it is referenced by a pager device on a user or user template.

Notes

8.40. 1041 - EXCEP- TION_SWITCH_REF_NOTIFICATION_PHONE

Error Number

1041

Description

Phone system cannot be deleted because it is referenced by a phone notification device on a user or user template.

Message

Phone system could not be deleted because it is referenced by a phone notification device on a user or user template.

Notes

8.41. 1042 - EXCEP- TION_SWITCH_REF_SUBSCRIBER_TRANSFER_OPTI ON

Error Number

1042

Description

Phone system cannot be deleted because the transfer settings of a user or user template refers to it.

Message

Phone system could not be deleted because the transfer settings of a user or user template refer to it.

Notes

8.42. 1043 - EXCEP- TION_SWITCH_REF_CALLHANDLER

Error Number

1043

Description

Phone system cannot be deleted because the transfer settings of a call handler or call handler template refers to it.

Message

Phone system could not be deleted because the transfer settings of a call handler or call handler template refer to it.

Notes

8.43. 1044 - EXCEPTION_ADDRESS_IN_LOCAL_DOMAIN

Error Number

1044

Description

The specified SMTP address cannot be in the VMS domain.

Message

The specified SMTP address cannot be in the VMS domain: %s

Notes

8.44. 1045 - EXCEP- TION_NOTIFICATION_REQUIRES_SCHEDULE

Error Number

1045

Description

An active notification device requires a valid schedule.

Message

An active notification device requires a valid schedule.

Notes

8.45. 1046 - EXCEP- TION_SWITCH_REF_NOTIFICATION_MWI

Error Number

1046

Description

Phone system cannot be deleted because it is referenced by a notification mwi on a user or user template.

Message

Phone system could not be deleted because it is referenced by a notification mwi on a user or user template.

Notes

8.46. 1047 - EXCEP- TION_CONFIGURATION_SETTING_NULL_REQUIRED

Error Number

1047

Description

The system configuration setting in tbl_Configuration cannot be NULL.

Message

Configuration setting cannot be NULL. Setting = [%s]

Notes

8.47. 1048 - EXCEPTION_DL_CONTAINS_CONTACTS

Error Number

1048

Description

The distribution list cannot be set to not allow contacts while it contains contacts. The contacts must first be removed from the distribution list before the distribution list can be set to not allow contacts.

Message

The distribution list cannot be set to not allow contacts while it contains contacts.

Notes

8.48. 1049 - EXCEPTION_DL_DOES_NOT_ALLOW_CONTACTS

Error Number

1049

Description

The distribution list to which a contact is being added does not allow contacts.

Message

The distribution list does not allow contacts.

Notes

8.49. 1050 - EXCEPTION_NOTIFICATION_PHONENUMBER_REQUIRED

Error Number

1050

Description

If a notification device is active, the phone number attribute of the device must contain a valid value.

Message

The phone number for the active notification device must contain a valid value. Phone number parameter = [%s], Table = [%s], Column = [%s]

Notes

8.50. 1051 - EXCEPTION_ROLE_DISABLED

Error Number

1051

Description

The role is disabled. A role that is disabled (IsEnabled=0) is hidden and cannot be displayed in the SA, nor can it be assigned to a policy.

Message

The provided role is disabled and cannot be assigned to a policy.

Notes

8.51. 1052 - EXCEPTION_USER_INUSE_BY_CALLHANDLER

Error Number

1052

Description

The user is the message recipient for a system call handler or system call handler template.

Message

The user is the message recipient for a system call handler or system call handler template.

Notes

8.52. 1053 - EXCEP- TION_USER_INUSE_BY_SMPPPROVIDER

Error Number

1053

Description

The user is the owner of an SMPP Provider.

Message

The user is the owner of an SMPP Provider.

Notes

8.53. 1054 - EXCEPTION_USER_INUSE_BY_INTERVIEWHANDLER

Error Number

1054

Description

The user is the message recipient for an interview handler.

Message

The user is the message recipient for an interview handler.

Notes

8.54. 1116 - EXCEP- TION_AUTHENTICATION_LOCKOUT

Error Number

1116

Description

An attempt was made to authenticate a user when the user's account is locked out.

Message

Error: Authentication failed. Account is locked out

Notes

Returned regardless of whether correct credentials were passed in.

8.55. 1117 - EXCEPTION_AUTHENTICATION_FAILED

Error Number

1117

Description

Authentication of a user failed due to an incorrect password/username combination.

Message

Authentication failed.

Notes

8.56. 1119 - EXCEP- TION_CREDENTIAL_HISTORY_MATCH

Error Number

1119

Description

The credential matches a previous credential for this user.

Message

The credential matches a previous credential for this user.

Notes

8.57. 1120 - EXCEPTION_PERSONALGROUP_NUMERICID_DUPLICATE

Error Number

1120

Description

Numeric id already exists.

Message

NumericId is already in use - value must be unique for specified owner.

Notes

For personal voice mail lists (in tbl_PersonalGroup), if NumericId is specified it must be unique for the user to which it belongs.

8.58. 1121 - EXCEPTION_CREDENTIAL_MINLENGTH_CHECK_FAILED

Error Number

1121

Description

The credential minimum length check failed.

Message

The credential minimum length check failed. Minimum length = %s.

Notes

8.59. 1122 - EXCEPTION_CREDENTIAL_REQUIRED_CHARACTERS_CHECK_FAILED

Error Number

1122

Description

The credential does not contain three of the four required character group types.

Message

The credential does not contain three of the four required character group types.

Notes

This applies to Password credentials only.

8.60. 1123 - EXCEP- TION_CREDENTIAL_THREE_CONSECUTIVE_CHARAC TERS_CHECK_FAILED

Error Number

1123

Description

The credential consists of the same character repeated more than three times consecutively.

Message

The credential consists of the same character repeated more than 3 times consecutively.

Notes

This applies to Password credentials only.

8.61. 1124 - EXCEPTION_CREDENTIAL_ALIAS_CHECK_FAILED

Error Number

1124

Description

The credential repeats or includes the user alias.

Message

The credential repeats or includes the user alias.

Notes

8.62. 1125 - EXCEPTION_CREDENTIAL_EXTENSION_CHECK_FAILED

Error Number

1125

Description

The credential repeats or includes the user's extension.

Message

The credential repeats or includes the user dtmfaccessid

Notes

8.63. 1126 - EXCEPTION_CREDENTIAL_ASCENDING_CHARACTERS_CHECK_FAILED

Error Number

1126

Description

The credential consists of ascending consecutive characters.

Message

The credential consists of ascending consecutive characters.

Notes

8.64. 1127 - EXCEPTION_CREDENTIAL_DESCENDING_CHARACTERS_CHECK_FAILED

Error Number

1127

Description

The credential consists of descending consecutive characters.

Message

The credential consists of descending consecutive characters.

Notes

8.65. 1130 - EXCEPTION_CREDENTIAL_TWO_CONSECUTIVE_CHARACTERS_CHECK_FAILED

Error Number

1130

Description

The credential consists of the same character repeated more than two times consecutively.

Message

The credential consists of the same character repeated more than 2 times consecutively.

Notes

This applies to PIN credentials only.

8.66. 1131 - EXCEPTION_CREDENTIAL_THREE_UNIQUEDIGITS_CHECK_FAILED

Error Number

1131

Description

The credential does not contain at least three unique digits.

Message

The credential does not contain at least three unique digits.

Notes

This applies to PIN credentials only.

8.67. 1132 - EXCEPTION_CREDENTIAL_FIRSTNAME_CHECK_FAILED

Error Number

1132

Description

The credential is the same as the numeric representation of the user's first name.

Message

The credential is the same as the numeric representation of the user's first name.

Notes

This applies to PIN credentials only.

8.68. 1133 - EXCEPTION_CREDENTIAL_LASTNAME_CHECK_FAILED

Error Number

1133

Description

The credential is the same as the numeric representation of the user's last name.

Message

The credential is the same as the numeric representation of the user's last name.

Notes

This applies to PIN credentials only.

8.69. 1134 - EXCEPTION_CREDENTIAL_DIGITGROUPS_CHECK_FAILED

Error Number

1134

Description

The credential consists of groups of repeated digits.

Message

The credential consists of groups of repeated digits.

Notes

This applies to PIN credentials only.

8.70. 1135 - EXCEP- TION_CREDENTIAL_KEYPAD_CHECK_FAILED

Error Number

1135

Description

The credential consists of patterns that are dialed in a straight line on a keypad.

Message

The credential consists of patterns that are dialed in a straight line on a keypad.

Notes

This applies to PIN credentials only.

8.71. 1137 - EXCEPTION_AUTHENTICATION_CREDENTIAL_EXPIRED

Error Number

1137

Description

The credential has expired. The user was authenticated, but the credential has expired and should be changed.

Message

The credential has expired.

Notes

8.72. 1138 - EXCEP- TION_CREDENTIAL_CANTCHANGE

Error Number

1138

Description

The user cannot change the credential.

Message

The user cannot change the credential.

Notes

8.73. 1139 - EXCEPTION_CREDENTIAL_MINDURATION_NOT_ELAPSED

Error Number

1139

Description

The user cannot change the credential because the minimum duration between credential changes has not elapsed.

Message

The user cannot change the credential because the minimum duration between credential changes has not elapsed.

Notes

The credential cannot be changed due to MinDuration policy setting in Credential Policy.

8.74. 1140 - EXCEPTION_VALUE_MIN

Error Number

1140

Description

Value specified is below the minimum allowable value.

Message

Value specified (%s) is below the minimum allowable value (%s).

Notes

8.75. 1141 - EXCEPTION_VALUE_MAX

Error Number

1141

Description

Value specified exceeds the maximum allowable value.

Message

Value specified (%s) exceeds the maximum allowable value (%s).

Notes

8.76. 1142 - EXCEPTION_VALUE_REGEX

Error Number

1142

Description

The specified string was invalid according to the validation criteria.

Message

The specified string was invalid according to the validation criteria.

Notes

8.77. 1144 - EXCEPTION_QUOTA_PARAMETER_CONSTRAINT_VIOLATION

Error Number

1144

Description

The specified warning, send, or receive quota value is invalid. The warning value must be less than or equal to the send value. The send value must be less than or equal to the receive value.

Message

The specified warning, send, or receive quota value is invalid. The warning value must be less than or equal to the send value. The send value must be less than or equal to the receive value.

Notes

Bad quota specified. warning <=send <=receive.

8.78. 1145 - EXCEP- TION_QUOTA_PARAMETER_INVALID

Error Number

1145

Description

The specified warning, send, or receive quota value is invalid. Quota values must be greater than -1.

Message

The specified warning, send, or receive quota value is invalid. Quota values must be greater than -1.

Notes

8.79. 1146 - EXCEPTION_INVALID_SMTP_ADDRESS

Error Number

1146

Description

The specified SMTP address is not a valid SMTP address.

Message

The specified SMTP address was not valid.

Notes

This error will be generated when an attempt to convert an alias to an SMTP address failed due to Unicode or other invalid characters in the SMTP address.

8.80. 1147 - EXCEP- TION_CANNOT_REMOVE_DEFAULT

Error Number

1147

Description

The object is set as the default. This object cannot be removed or unset without first specifying another object as the default.

Message

You cannot remove or unset the default value for this object without first specifying another object as the default.

Notes

This error currently only applies to the SMTP server object.

8.81. 1148 - EXCEPTION_VALUE_REGEX_DETAIL

Error Number

1148

Description

The specified column value is invalid.

Message

Value of table %s column %s is invalid.

Notes

8.82. 1149 - EXCEP- TION_MEDIAPORTGROUPCODEC_PACKETSIZE_INV ALID

Error Number

1149

Description

Preferred packet size is not supported.

Message

Preferred packet size is not supported.

Notes

8.83. 1150 - EXCEPTION_MEDIA_MAXPORTNUM_EXCEEDED

Error Number

1150

Description

Port number is out of range.

Message

Port number is out of range

Notes

8.84. 1200 - EXCEPTION_DUPLICATE_DTMFACCESSID

Error Number

1200

Description

An object with the specified DtmfAccessId already exists in the database.

Message

Duplicate DtmfAccessId: %s

Notes

8.85. 1306 - EXCEPTION_COS_READONLY

Error Number

1306

Description

The COS cannot be updated because it is marked read only.

Message

The COS of service cannot be updated because it is marked read only.

Notes

8.86. 1307 - EXCEPTION_RESOURCE_DISABLED

Error Number

1307

Description

The resource is disabled.

Message

The resource is disabled: %s.

Notes

8.87. 1308 - EXCEP- TION_RESOURCE_OWNER_INVALID

Error Number

1308

Description

The resource is owned by another user.

Message

The resource is owned by another user.

Notes

8.88. 1309 - EXCEP- TION_USER_CANNOT_DELETE_SELF

Error Number

1309

Description

A user cannot delete themselves.

Message

Users cannot be deleted by themselves.

Notes

8.89. 1310 - EXCEPTION_RESTRICTION_VIOLATION

Error Number

1310

Description

The extension or phone number violated a restriction in the restriction table.

Message

The Phone Number/Extension has violated a restriction in the restriction table. Phone Number/Extension = [%s], Restriction Type = [%s]

Notes

8.90. 1311 - EXCEP- TION_NOTIFICATION_SMPPPROVIDER_REQUIRED

Error Number

1311

Description

To create/modify a SMS type notification device, the notification device must have a valid SMPP provider.

Message

The notification device must have a valid SMPP provider.

Notes

8.91. 1312 - EXCEPTION_USER_IS_ONLY_SYSADMIN

Error Number

1312

Description

The user cannot be deleted because there are no other users assigned to the System Administrator role.

Message

The user cannot be deleted because there are no other users assigned to the System Administrator role.

Notes

8.92. 1313 - EXCEP- TION_POLICY_IS_ONLY_SYSADMIN

Error Number

1313

Description

The policy cannot be deleted because there are no other users assigned to the System Administrator role.

Message

The policy cannot be deleted because there are no other users assigned to the System Administrator role.

Notes

8.93. 2001 - EXCEPTION_DISMOUNTED_DATABASE

Error Number

2001

Description

Message Store Database is currently dismounted.

Message

Message Store Database is currently dismounted.

Notes

8.94. -692 - EXCEPTION_OBJECT_INUSE_FK

Error Number

-692

Description

Operation cannot be completed because the object is in use.

Message

Operation cannot be completed because the object is in use. Key = [%s].

Notes

This exception provides a more user friendly message for FK violations than what Informix provides.

Chapter 9. Schema Changes

This chapter shows the high-level differences in schema between this release and the previous release.

9.1. Table Schema Differences

Tables in CUC 1.2 And Not In CUC 2.1:

tbl_RoutingRuleParameter, tbl_VMSCertificate, tbl_VMSRole, tbl_VMSRoleTemplate, tbl_VMSServerRole

Tables In CUC 2.1 And Not In CUC 1.2:

tbl_IpAddressAccessList, tbl_LanguageMap, tbl_LicenseFileStatus, tbl_LicenseStatus, tbl_LocationVPIM, tbl_LoggerJavaMapping, tbl_MediaPortGroupCodec, tbl_RoutingRuleCondition, tbl_RtpCodecDef, tbl_RtpCodecDefPacketSize, tbl_Service, tbl_SmtpServer

Table Differences Between CUC 1.2 And CUC 2.1:

Table	Columns Removed From CUC 2.1	Columns Added To CUC 2.1
tbl_Alias		ObjectId
tbl_AlternateName		DistributionListObjectId, LocationObjectId, PersonalGroupObjectId
tbl_CallHandler		Recipient_ContactObjectId, SendSecureMsg
tbl_Configuration		ResetToDefaultOnUpgrade
tbl_Contact	AmisDisableOutbound, RemoteMailAddress	CallHandlerObjectId, DeliveryLocationObjectId, DisableOutbound, RemoteAddress
tbl_Cos		RequireSecureMessages
tbl_Credential		EncryptionType, ObjectId
tbl_CredentialPolicy		ExpiryWarningDays
tbl_DistributionList		AllowContacts, AllowForeignMessage
tbl_DistributionListMember		MemberContactObjectId
tbl_DistributionListSetMember		MemberContactObjectId
tbl_Location	ObjectType	StreamFileObjectId
tbl_LocationVMS	FlexLMData, LicAdvancedUserMax, LicAdvancedUserMaxCompliance, LicenseState, LicensingSystemState, LicIMAPSubscribersMax, LicIMAPSubscribersMaxCompliance, LicRegionIsUnrestricted, LicSubscribersMax, LicSubscribersMaxCompliance, LicVMISubscribersMax, LicVMISubscribersMaxCompliance, LicVoicePortsMax, LicVoicePortsMaxCompliance, SchemaBuild, SchemaMajorVersion, SchemaMinorVersion	AgcTargetDb, LastLicenseEvalTime, MaxContacts, OverallLicenseState, Smt-pSmartHost
tbl_MailboxMap		MailboxLoginType

Table	Columns Removed From CUC 2.1	Columns Added To CUC 2.1
tbl_MailboxStoreMap	Alias, RelativeURL	DbInstance, DialString, UseServiceCredentials
tbl_MediaPort	RtpWavDeviceId, SkinnyTSPDeviceIndex	SipSendPort
tbl_MediaPortGroup	AgcGainThreshold, AgcMinimumThreshold, AgcSampleSize, AgcUseCompression, BusyRecallSeq, CodecPreferenceG711u, CodecPreferenceG729, ConfirmReturnSeq, PauseDurationMs, SipG711Packetization, SipG729Packetization	PortNumMax
tbl_MediaPortGroupTemplate	Copy_BusyRecallSeq, Copy_CodecPreferenceG711u, Copy_CodecPreferenceG729, Copy_ConfirmReturnSeq, Copy_PauseDurationMs, Copy_SipG711Packetization, Copy_SipG729Packetization	Copy_PortNumMax
tbl_MediaSwitch		DefaultTRaPSwitch, EnablePhoneApplications, MwiForceOff
tbl_MessageAgingRule		AgingTimeType, Recent, Secure
tbl_RoutingRule	Condition, Target	CallType
tbl_SchemaInformation	DefaultObjectsPost, DefaultObjectsPre	IsCurrent
tbl_UserSubscriber	FirstSpeechTimeout	AnnounceUpcomingMeetings, ConfirmationConfidenceThreshold, EnableVisualMessageLocator, SendConv, SpeechConfidenceThreshold, SpeechSensitivity, SpeechSpeedVsAccuracy
tbl_WaveFormat		CodecId, JavaEncoding

9.2. View Schema Differences

Views In CUC 1.2 And Not In CUC 2.1:

vw_chk_MediaPort_RTPWavDeviceIDOutOfRange, vw_chk_MediaPort_SkinnyTSPDeviceIndexOutOfRange, vw_DistributionListMemberDisplay, vw_MediaPort_DeriveState, vw_MediaPort_DeriveState_SRMAware, vw_MediaPort_PortMemoryAssocCounts, vw_MediaPortGroup_PortMemoryAssocCounts, vw_MediaSwitch_PortMemoryAssocCounts, vw_MediaSwitch_ReferencesToCounts, vw_RoutingRuleParameter, vw_Subscriber_MediaSwitchAssoc, vw_VMSCertificate, vw_VMSRole, vw_VMSRoleDisplay, vw_VMSRoleTemplate, vw_VMSRoleTemplateDisplay, vw_VMSServerRole, vw_VMSServerRole_SRMRole, vw_VMSServerRole_SRMRoleDisplay, vw_VMSServerRoleDisplay

Views In CUC 2.1 And Not In CUC 1.2:

vw_chk_MediaPort_SIPSendPortOutOfRange, vw_chk_MediaPortGroup_NoCodecs, vw_chk_MediaPortGroup_NoMWIONOffCodes, vw_chk_MediaSwitch_NoDefaultTRaPSwitch, vw_ExternalService, vw_IpAddressAccessList, vw_IpAddressAccessList_Composite, vw_LanguageMap, vw_LicenseFileStatus, vw_LicenseStatus, vw_Location, vw_LocationVPIM, vw_LoggerJavaMapping, vw_MediaPort_HavingActivePortMemoryRefs, vw_MediaPortGroupCodec, vw_NotificationAllActiveDevices, vw_RoutingRuleCondition, vw_RtpCodecDef, vw_RtpCodecDefPacketSize, vw_SchemaInformation, vw_Service, vw_SmtpServer, vw_Subscriber_PrimaryDtmf, vw_Subscriber_VoiceFileName, vw_SubscriberExternalServiceMap, vw_SubscriberExternalServiceMapDetail

View Differences Between CUC 1.2 And CUC 2.1:

View	Columns Removed From CUC 2.1	Columns Added To CUC 2.1
vw_Alias		ObjectId
vw_AlternateName		DistributionListObjectId, LocationObjectId, PersonalGroupObjectId
vw_BroadcastMessage		StreamFile
vw_Callhandler		Recipient_ContactObjectId, SendSecureMsg
vw_CallhandlerNonPrimary		Recipient_ContactObjectId, SendSecureMsg
vw_CallhandlerPrimary		Recipient_ContactObjectId, SendSecureMsg
vw_CallhandlerPrimaryTemplate		Recipient_ContactObjectId, SendSecureMsg

vw_RoutingRule	Condition, Target	CallType
vw_ScopeDistributionListMember		MemberContactObjectId
vw_Subscriber	FirstSpeechTimeout	AnnounceUpcomingMeetings, ConfirmationConfidenceThreshold, EnableVisualMessageLocator, SendConv, SpeechConfidenceThreshold, SpeechSensitivity, SpeechSpeedVsAccuracy
vw_SubscriberContact		CallHandlerObjectId, DeliveryLocationObjectId
vw_SubscriberTemplate	FirstSpeechTimeout	AnnounceUpcomingMeetings, ConfirmationConfidenceThreshold, EnableVisualMessageLocator, SendConv, SpeechConfidenceThreshold, SpeechSensitivity, SpeechSpeedVsAccuracy
vw_UserMailboxMap		DialString, MailboxLoginType, MailDbInstance
vw_UserPrimarySmtPAddress		MailDbInstance
vw_WaveFormat		CodecId, JavaEncoding

9.3. Stored Procedure Schema Differences

Stored Procedures In CUC 1.2 And Not In CUC 2.1:

csp_Authenticate, csp_AuthenticateWithoutExceptions, csp_CallhandlerCreate, csp_CallhandlerDelete, csp_ConfigurationCreate, csp_ConfigurationDelete, csp_LocalizedTextCreate, csp_LocationCreate, csp_LocationModify, csp_LoggerDiagnosticGridCreate, csp_LoggerDiagnosticGridDelete, csp_MediaPortGroupIPPort_GetNextAvailablePort, csp_MenuEntryDelete, csp_NotificationRuleDelete, csp_private_MediaPortGroupCreateFromTemplate, csp_private_StreamFileDelete, csp_private_UserCredentialHistoryCheck, csp_private_UserCredentialHistoryCreate, csp_SQLAdminValidate, csp_VMSCertificateCreate, csp_VMSCertificateDelete, csp_VMSRoleSetState, csp_VMSServerRoleCreate, csp_VMSServerRoleDelete, csp_VMSServerRoleModify, csp_WaveFormatCreate, csp_WaveFormatDelete, csp_WaveFormatModify, csp_WaveFormatSet

Stored Procedures In CUC 2.1 And Not In CUC 1.2:

csp_DomainNameModify, csp_ExternalServiceCreate, csp_ExternalServiceDelete, csp_ExternalServiceModify, csp_GetLastError, csp_GetObjectByAnyExtension, csp_IPAddressAccessListCreate, csp_IPAddressAccessListDelete, csp_IPAddressAccessListModify, csp_IPPortReservation_GetNextAvailablePort, csp_LicenseFileStatusCreate, csp_LicenseFileStatusDelete, csp_LicenseFileStatusModify, csp_LicenseStatusCreate, csp_LicenseStatusDelete, csp_LicenseStatusModify, csp_LocationVPIMCreate, csp_LocationVPIMDelete, csp_LocationVPIMModify, csp_LoggerDiagnosticGridReset, csp_MediaPortGroupCodecCreate, csp_MediaPortGroupCodecDelete, csp_MediaPortGroupCodecModify, csp_RoutingRuleConditionCreate, csp_RoutingRuleConditionDelete, csp_RoutingRuleConditionModify, csp_ServiceModify, csp_SmtpServerCreate, csp_SmtpServerDelete, csp_SmtpServerModify, csp_SubscriberExternalServiceMapCreate, csp_SubscriberExternalServiceMapDelete, csp_SubscriberExternalServiceMapModify, csp_TimeZoneLocalUtc_s, csp_TimeZoneServerUtc, csp_TimeZoneUtcLocal_s, csp_TimeZoneUtcServer, csp_TraceDisable, csp_TraceEnable, csp_VirtualContactCreate

Stored Procedure Differences Between CUC 1.2 And CUC 2.1:

Stored Procedure	Parameters Removed From CUC 2.1	Parameters Added To CUC 2.1
csp_AliasCreate		@ObjectId
csp_AliasDelete	@Alias, @LocationObjectId	@ObjectId
csp_AliasModify	@LocationObjectId	@ObjectId
csp_AlternateNameCreate		@DistributionListObjectId, @LocationObjectId, @PersonalGroupObjectId
csp_BroadcastMessageModify		@LastModificationSubscriberObjectId
csp_CallhandlerModify		@Recipient_ContactObjectId, @SendSecureMsg
csp_CallhandlerPrimaryTemplateModify		@Recipient_ContactObjectId, @SendSecureMsg
csp_CallhandlerTemplateCreate		@Recipient_ContactObjectId, @SendSecureMsg
csp_CallhandlerTemplateModify		@Recipient_ContactObjectId, @SendSecureMsg
csp_ContactCreate	@AmisDisableOutbound, @RemoteMailAddress	@AddToDefaultDistributionList, @CallHandlerTemplateObjectId, @DeliveryLocationObjectId, @DisableOutbound, @RemoteAddress, @TransferEnabled, @TransferExtension

Stored Procedure	Parameters Removed From CUC 2.1	Parameters Added To CUC 2.1
csp_ContactModify	@AmisDisableOutbound, @LocationObjectId, @RemoteMailAddress	@DeliveryLocationObjectId, @DisableOutbound, @RemoteAddress, @TransferEnabled, @TransferExtension
csp_CosCreate		@RequireSecureMessages
csp_CosModify		@RequireSecureMessages
csp_CredentialCreate		@EncryptionType
csp_CredentialModify		@EncryptionType, @HashedCredential
csp_CredentialPolicyCreate		@ExpiryWarningDays
csp_CredentialPolicyModify		@ExpiryWarningDays
csp_DistributionListCreate		@AllowContacts, @AllowForeignMessage
csp_DistributionListDelete		@AllowContacts, @AllowForeignMessage
csp_DistributionListMemberCreate		@MemberContactObjectId
csp_DistributionListModify		@AllowContacts, @AllowForeignMessage
csp_GreetingModify		@Expired
csp_LocationVMSCreate	@FlexLMData, @LicAdvancedUserMax, @LicAdvancedUserMaxCompliance, @LicenseState, @LicensingSystemState, @LicIMAPSubscribersMax, @LicIMAPSubscribersMaxCompliance, @LicRegionIsUnrestricted, @LicSubscribersMax, @LicSubscribersMaxCompliance, @LicVMISubscribersMax, @LicVMISubscribersMaxCompliance, @LicVoicePortsMax, @LicVoicePortsMaxCompliance, @SchemaBuild, @SchemaMajorVersion, @SchemaMinorVersion	@AgcTargetDb, @LastLicenseEvalTime, @MaxContacts, @OverallLicenseState, @SmtptSmartHost, @VoiceName
csp_LocationVMSModify	@FlexLMData, @LicAdvancedUserMax, @LicAdvancedUserMaxCompliance, @LicenseState, @LicensingSystemState, @LicIMAPSubscribersMax, @LicIMAPSubscribersMaxCompliance, @LicRegionIsUnrestricted, @LicSubscribersMax, @LicSubscribersMaxCompliance, @LicVMISubscribersMax, @LicVMISubscribersMaxCompliance, @LicVoicePortsMax, @LicVoicePortsMaxCompliance, @SchemaBuild, @SchemaMajorVersion, @SchemaMinorVersion	@AgcTargetDb, @LastLicenseEvalTime, @MaxContacts, @OverallLicenseState, @SmtptSmartHost, @VoiceName
csp_MailboxMapCreate		@MailboxLoginType
csp_MailboxMapModify		@MailboxLoginType
csp_MailboxModify		@MailboxLoginType
csp_MailboxStoreAttributesGet	@Path	
csp_MailboxStoreMapCreate	@Alias, @RelativeURL	@DbInstance, @DialString
csp_MailboxStoreMapModify	@Alias, @RelativeURL	@DbInstance, @DialString

Stored Procedure	Parameters Removed From CUC 2.1	Parameters Added To CUC 2.1
csp_MediaPortGroupCreate	@AgcGainThreshold, @AgcMinimumThreshold, @AgcSampleSize, @AgcUseCompression, @BusyRecallSeq, @CodecPreferenceG711u, @CodecPreferenceG729, @ConfirmReturnSeq, @PauseDurationMs, @SipG711Packetization, @SipG729Packetization	@PortNumMax
csp_MediaPortGroupModify	@AgcGainThreshold, @AgcMinimumThreshold, @AgcSampleSize, @AgcUseCompression, @BusyRecallSeq, @CodecPreferenceG711u, @CodecPreferenceG729, @ConfirmReturnSeq, @PauseDurationMs, @SipG711Packetization, @SipG729Packetization	@PortNumMax
csp_MediaPortGroupTemplateCreate	@Copy_BusyRecallSeq, @Copy_CodecPreferenceG711u, @Copy_CodecPreferenceG729, @Copy_ConfirmReturnSeq, @Copy_PauseDurationMs, @Copy_SipG711Packetization, @Copy_SipG729Packetization	@Copy_PortNumMax
csp_MediaPortGroupTemplateModify	@Copy_BusyRecallSeq, @Copy_CodecPreferenceG711u, @Copy_CodecPreferenceG729, @Copy_ConfirmReturnSeq, @Copy_PauseDurationMs, @Copy_SipG711Packetization, @Copy_SipG729Packetization	@Copy_PortNumMax
csp_MediaPortModify	@SkinnyDeviceCertificateChangeId, @SkinnyDevicePrivateKeyChangeId	
csp_MediaSwitchCreate		@DefaultTRaPSwitch, @EnablePhoneApplications, @MwiForceOff
csp_MediaSwitchModify		@DefaultTRaPSwitch, @EnablePhoneApplications, @MwiForceOff
csp_MessageAgingRuleCreate		@AgingTimeType, @Recent, @Secure
csp_MessageAgingRuleModify		@AgingTimeType, @Recent, @Secure
csp_PersonalVoiceMailListMemberCreate		@MemberContactObjectId
csp_RestrictionPatternDelete	@RestrictionTableObjectId, @SequenceNumber	
csp_RoutingRuleCreate	@Condition, @Target	@CallType
csp_RoutingRuleDelete		@CallType
csp_RoutingRuleModify	@Condition, @Target	@CallType

Stored Procedure	Parameters Removed From CUC 2.1	Parameters Added To CUC 2.1
csp_SubscriberCreate	@FirstSpeechTimeout	@AnnounceUpcomingMeetings, @ConfirmationConfidenceThreshold, @EnableVisualMessageLocator, @SendConv, @SpeechConfidenceThreshold, @SpeechSensitivity, @SpeechSpeedVsAccuracy
csp_SubscriberDelete		@ReplacementSubscriberObjectId
csp_SubscriberModify	@FirstSpeechTimeout, @LocationObjectId	@AnnounceUpcomingMeetings, @ConfirmationConfidenceThreshold, @EnableVisualMessageLocator, @SendConv, @SpeechConfidenceThreshold, @SpeechSensitivity, @SpeechSpeedVsAccuracy
csp_SubscriberTemplateCreate	@FirstSpeechTimeout	@AnnounceUpcomingMeetings, @ConfirmationConfidenceThreshold, @EnableVisualMessageLocator, @SendConv, @SpeechConfidenceThreshold, @SpeechSensitivity, @SpeechSpeedVsAccuracy
csp_SubscriberTemplateModify	@FirstSpeechTimeout, @LocationObjectId	@AnnounceUpcomingMeetings, @ConfirmationConfidenceThreshold, @EnableVisualMessageLocator, @SendConv, @SpeechConfidenceThreshold, @SpeechSensitivity, @SpeechSpeedVsAccuracy
csp_TransferOptionModify		@Expired
csp_UserModify	@LocationObjectId	
csp_UserTemplateModify	@LocationObjectId
