Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Manager
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object Cisco Unity Connection uses for subscriber Telephone Record and Playback (TRAP) sessions and to dial MWI on or off requests when the Cisco Unity Connection system has a dual switch integration. FK to tbl_MediaSwitchObjectId
Notes:	Note that for transfers, the MediaSwitchObjectId for this subscriber is stored in tbl_TransferOption and is associated with their primary call handler. For message notification, the MediaSwitchObjectId is stored in tbl_NotificationDevices.
Business Rules:	
Developer Notes:	\$\$MIGRATION: tbl_Subscriber.SwitchId
Table/Column Mapping:	tbl_UserSubscriber.MediaSwitchObjectId
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.MessageAgingPolicyObjectId
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MessageLocatorSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort messages when the "Message Locator" feature is enabled.
Notes:	Values: 1: LIFO - sort new messages first. 2: FIFO - sort old messages first.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.MessageLocatorSortOrder
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	MessageSortOrder
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MessageTypeMenu

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the message type menu when the subscriber logs on to Cisco Unity Connection over the phone.

Property Name	Value
Notes:	<p>The "message type" menu that subscribers will hear is "Press 1 to hear voice messages. Press 2 to hear e-mails. Press 3 to hear faxes. Press 4 to hear receipts."</p> <p>Note that although the e-mail and fax options are available in the Message Type Menu, Cisco Unity Connection plays e-mails and faxes only when the subscriber is assigned to a class of service that has the Text to Speech (TTS) and FaxMail features enabled. With fax messages, Cisco Unity Connection plays only message properties (for example, the sender, date, and time).</p> <p>Values: 0: Do not play message type menu 1: Play message type menu</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.MessageTypeMenu
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

NewMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort new messages.
Notes:	<p>Values: 1: LIFO - sort new messages first. 2: FIFO - sort old messages first.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.NewMessageSortOrder
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	MessageSortOrder
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

NewMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "new" messages: <ul style="list-style-type: none"> * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	<p>This column consists of a sequence of seven digits with each digit representing a specific message type.</p> <p>For example, 1352467 indicates that new messages are played in the following order: Urgent voice first, then urgent fax, urgent e-mail followed by non-urgent voice, non-urgent fax, non-urgent e-mail messages, and then lastly receipts and notices.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.NewMessageStackOrder
Primary Key:	False
Allow Null:	False
Default Value:	1234567
Custom Type:	MessageStackOrder
SQL Data Type/Length:	nvarchar (7 characters)
Validation - Expression:	[1-7]{7}
Validation - Description:	A string of seven digits consisting of digits 1-7.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	7 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

NotificationType

Property Name	Value
Description:	The notification type to use for this mailbox created with this subscriber. See definitions under custom type - NotificationType for more details.
Notes:	Values: 0: Classical - marking a message unread, read and back to unread will turn the notification (mwi) on, off and back on. 1: Modern - once a message has been touched (read) then it will not trigger notifications each time the message is marked unread and read again.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.NotificationType
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	NotificationType
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_User.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PabLastImported
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

PcaAddressBookRowsPerPage

Property Name	Value
Description:	Controls the number of matching entries the Address Book displays per page, when a search is performed. The Address Book is used across multiple PCA applications and so this setting applies globally.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.PcaAddressBookRowsPerPage
Primary Key:	False
Allow Null:	False
Default Value:	5
Custom Type:	

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	1
Validation - Maximum Value:	99

PcaHomePage

Property Name	Value
Description:	The Home Page is the first page that is displayed after logging in to the PCA.
Notes:	In 4.05 and earlier versions, the home page is fixed. This setting allows users the flexibility to choose their home page. For example, a user may want to be taken directly to Unity Inbox after logging in, instead of the default home page that simply lists all the available applications in the PCA.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.PcaHomePage
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	lvarchar (256 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	256 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.

Property Name	Value
Notes:	A specific format for zip or postal codes is not required since these items differ so widely and can change at any time. This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PostalCode
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PromptSpeed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back prompts to the subscriber.
Notes:	A value between 0 and 200 is allowed. Normal speed, the speed at which messages are recorded is a value of 100. Twice as fast as normal speed is a value of 200. Half as fast as normal speed is a value of 50.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.PromptSpeed
Primary Key:	False
Allow Null:	False
Default Value:	100
Custom Type:	
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0

Property Name	Value
Validation - Maximum Value:	200

PromptVolume

Property Name	Value
Description:	The volume level for playback of system prompts.
Notes:	A value of NULL indicates to use system setting instead.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.PromptVolume
Primary Key:	False
Allow Null:	False
Default Value:	50
Custom Type:	Volume
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	100

ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	Normally used only for system objects.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.ReadOnly
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ReceiveQuota

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	Values: -2: The default system quota is assigned. -1: The quota is unlimited. 1- n : Limit in bytes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.ReceiveQuota
Primary Key:	False
Allow Null:	False
Default Value:	-2
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RecordUnknownCallerName

Property Name	Value
Description:	A flag indicating whether a caller should be promoted to record his/her name if Unity does not receive caller id.
Notes:	This applies only to subscribers with the personal call routing rules feature enabled.
Business Rules:	Subscriber must have personal call routing rules enabled in their COS.
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.RecordUnknownCallerName
Primary Key:	False

Property Name	Value
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RepeatMenu

Property Name	Value
Description:	The number of times to repeat a menu in TUI.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.RepeatMenu
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	10

RingPrimaryPhoneFirst

Property Name	Value
Description:	A flag indicating whether a subscriber's primary phone should be rung before trying other destinations in a personal group.
Notes:	This applies only to subscribers with the personal call routing rules feature enabled.
Business Rules:	Subscriber must have personal call routing rules enabled in their COS.

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.RingPrimaryPhoneFirst
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	<p>Values:</p> <p>0: Cisco Unity Connection will not route an NDR to the sender's mailbox. Rather Cisco Unity Connection will delete the NDR.</p> <p>1: Cisco Unity Connection will route an NDR to the sender's mailbox when the message is undeliverable. The NDR message will be presented in the new message stack. Cisco Unity Connection will activate the MWI similar to new voice messages. Cisco Unity Connection will also notify based on subscriber notification device settings when new NDR's are present in the subscriber mailbox similar to new voice messages.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.RouteNDRToSender
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SavedMessageSortOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection will sort saved messages.
Notes:	Values: 1: LIFO - sort new messages first. 2: FIFO - sort old messages first.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SavedMessageSortOrder
Primary Key:	False
Allow Null:	False
Default Value:	2
Custom Type:	MessageSortOrder
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SavedMessageStackOrder

Property Name	Value
Description:	The order in which Cisco Unity Connection plays the following types of "saved" messages: * Urgent voice messages * Non-urgent voice messages * Urgent fax messages * Non-urgent fax messages * Urgent e-mail messages * Non-urgent e-mail messages * Receipts and notices
Notes:	This column consists of a sequence of seven digits with each digit representing a specific message type. For example, 1352467 indicates that saved messages are played in the following order: Urgent voice first, then urgent fax, urgent e-mail followed by non-urgent voice, non-urgent fax, non-urgent e-mail messages, and then lastly receipts and notices.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SavedMessageStackOrder
Primary Key:	False
Allow Null:	False

Property Name	Value
Default Value:	1234567
Custom Type:	MessageStackOrder
SQL Data Type/Length:	nvarchar (7 characters)
Validation - Expression:	[1-7]{7}
Validation - Description:	A string of seven digits consisting of digits 1-7.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	7 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

SayAltGreetWarning

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection notifies the subscriber when they login via the phone (plays conversation) or CPCA (displays a warning banner) if their alternate greeting is turned on.
Notes:	Values: 0: Do not notify the subscriber that their alternate greeting is turned on 1- Notify the subscriber when they login if their alternate greeting is turned on
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayAltGreetWarning
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayAni

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the Automatic Number Identification (ANI) information during message playback for voice messages from unidentified callers.

Property Name	Value
Notes:	Note that the phone system must send Cisco Unity Connection the ANI information. If Cisco Unity Connection is connected to a phone system that does not provide ANI information, even though this setting is enabled (1), there will be no change to the conversation i.e., as if the setting is disabled. Values: 0: ANI information is not played. 1: ANI information is played to the user.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayAni
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayCopiedNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the "copied" names during message playback for a subscriber.
Notes:	Values: 0: Do not announce copied names. 1: Announce copied names.
Business Rules:	
Developer Notes:	It may be implemented in the future. This is intended to provide a way for subscribers to hear which other subscribers were CC'd on a particular message, if they choose.
Table/Column Mapping:	tbl_UserSubscriber.SayCopiedNames
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayDistributionList

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the distribution list that sends a message, if applicable.
Notes:	Values: 0: Do not announce the distribution list. 1: Announce the distribution list.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayDistributionList
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayMsgNumber

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the position of each message in the stack (i.e., 'Message 1', 'Message 2', etc.) during message playback for the subscriber.
Notes:	Values: 0: Do not play the message number. 1: Play the message number.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayMsgNumber

Property Name	Value
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SaySender

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the sender of a message during message playback for the subscriber.
Notes:	Values: 0: Do not announce the sender. 1: Announce the sender.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SaySender
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SaySenderExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection during message playback, plays the primary extension information of the subscriber who sent the message after playing the sender's voice name.
Notes:	Values: 0: Do not play the extension information of the subscriber who sent the message. 1- After playing the sender's voice name, play the primary extension information of the subscriber who sent the message.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SaySenderExtension
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTimestampAfter

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp after it plays back each message for the subscriber.
Notes:	Values: 0: Do not announce the timestamp after each message is played. 1: Announce the timestamp after each message is played.
Business Rules:	Both the SayTimestampAfter and the SayTimestampBefore can be set to 1. However, this would be annoying to the subscriber. Both can also be disabled, resulting in no timestamp being played during message playback for a subscriber.
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTimestampAfter
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	

Property Name	Value
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTimestampBefore

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the timestamp before it plays back each for the subscriber.
Notes:	Values: 0: Do not announce the timestamp before each message is played. 1: Announce the timestamp before each message is played.
Business Rules:	Both the SayTimestampAfter and the SayTimestampBefore can be set to 1. However, this would be annoying to the subscriber. Both can also be disabled, resulting in no timestamp being played during message playback for a subscriber.
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTimestampBefore
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalNew

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new messages in the subscriber mailbox.

Property Name	Value
Notes:	This number includes all voice, email, fax and receipt messages as applicable (depending on the subscriber COS settings). Values: 0: Do not announce total number of new messages. 1: Announce the total number of new messages in the subscriber mailbox.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTotalNew
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalNewEmail

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new e-mail messages in the subscriber mailbox.
Notes:	Applies only if TTS is installed and the subscriber's COS allows for it. Values: 0: Do not announce total number of new e-mail messages. 1: Announce the total number of new e-mail messages in the subscriber mailbox.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTotalNewEmail
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalNewFax

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new fax messages in the subscriber mailbox.
Notes:	Applies only if fax mail is enabled in the subscriber's COS. Values: 0: Do not announce total number of new fax messages. 1: Announce the total number of new fax messages in the subscriber mailbox.
Business Rules:	
Developer Notes:	Not in Cisco Unity Connection. Integration with 3rd-party fax applications is not supported in Cisco Unity Connection.
Table/Column Mapping:	tbl_UserSubscriber.SayTotalNewFax
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalNewVoice

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new voice messages in the subscriber mailbox.
Notes:	Values: 0: Do not announce total number of new voice messages. 1: Announce the total number of new voice messages in the subscriber mailbox.
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTotalNewVoice
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalReceipts

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of new receipts in the subscriber mailbox.
Notes:	Values: 0: Do not announce total number of new receipts. 1: Announce the total number of new receipts in the subscriber mailbox.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTotalReceipts
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SayTotalSaved

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection announces the total number of saved messages in the subscriber mailbox.
Notes:	Includes all message types allowed by the subscriber COS that are marked as read in their mailbox. Values: 0: Do not announce total number of saved messages. 1: Announce the total number of saved messages in the subscriber mailbox.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SayTotalSaved
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SendBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber may send broadcast messages.
Notes:	Values: 0: Cannot send broadcast messages. 1: Can send broadcast messages.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SendBroadcastMsg
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	

Property Name	Value
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SendConv

Property Name	Value
Description:	Type of send conversation to use - standard or streamlined.
Notes:	Values: 0: Standard 1: Streamlined
Business Rules:	
Developer Notes:	ekostenb - changed default to StreamLined per CSCsh55132
Table/Column Mapping:	tbl_UserSubscriber.SendConv
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	SendConverationType
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SendQuota

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	Values: -2: The default system quota is assigned. -1: The quota is unlimited. 1- n : Limit in bytes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.SendQuota
Primary Key:	False
Allow Null:	False

Property Name	Value
Default Value:	-2
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SendReadReceipts

Property Name	Value
Description:	A flag indicating whether the mailbox created with this subscriber allows the system to send read receipts on its behalf.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.SendReadReceipts
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SkipPasswordForKnownDevice

Property Name	Value
Description:	A flag indicating whether the subscriber will be asked for his/her PIN when attempting to sign-in from a known device.

Property Name	Value
Notes:	A "known device" is a phone number that is listed in tbl_DtmfAccessId or tbl_PhoneNumber. Values: 0: Subscriber will not be asked for their PIN when calling in from a known device. 1: Subscriber will be asked for their PIN when calling in from a known device.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SkipPasswordForKnownDevice
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SpeechCompleteTimeout

Property Name	Value
Description:	Specifies the required length of silence (in milliseconds) following user speech before the recognizer finalizes a result (either accepting it or throwing a nomatch event). The SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar. A long SpeechCompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechCompleteTimeout value may lead to the inappropriate break up of an utterance. Reasonable SpeechCompleteTimeout values are typically in the range of 0.3 seconds to 1.0 second. See Appendix D?Timing properties of the VoiceXML Specification for details.
Notes:	VUI accessibility setting.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SpeechCompleteTimeout
Primary Key:	False
Allow Null:	False
Default Value:	300
Custom Type:	
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	50000

SpeechConfidenceThreshold

Property Name	Value
Description:	When the engine matches a spoken phrase, it associates a confidence level with that conclusion. This parameter determines what confidence level should be considered a successful match. A higher value means the engine is will report fewer successful matches, but it will be more confident in the matches that it reports.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SpeechConfidenceThreshold
Primary Key:	False
Allow Null:	False
Default Value:	45
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	100

SpeechIncompleteTimeout

Property Name	Value
Description:	<p>Specifies the required length of silence (in milliseconds) from when the speech prior to the silence matches an active grammar, but where it is possible to speak further and still match the grammar. By contrast, the SpeechCompleteTimeout property is used when the speech prior to the silence matches an active grammar and no further words can be spoken.</p> <p>A long SpeechIncompleteTimeout value delays the result completion and therefore makes the system's response slow. A short SpeechIncompleteTimeout value may lead to the inappropriate break up of an utterance.</p> <p>The SpeechIncompleteTimeout value is usually longer than the completetimeout value to allow users to pause mid-utterance (for example, to breathe). Note that values set for the completetimeout property are only supported if they are less than the incompletetimeout property. See Appendix D?Timing properties of the VoiceXML Specification for details.</p>
Notes:	VUI accessibility setting.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SpeechIncompleteTimeout
Primary Key:	False
Allow Null:	False
Default Value:	750
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	300
Validation - Maximum Value:	10000

SpeechSensitivity

Property Name	Value
Description:	To filter out background noise and not mistake it for speech, the engine supports a variable level of sound sensitivity. A higher value means higher sensitivity.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SpeechSensitivity
Primary Key:	False
Allow Null:	False
Default Value:	50
Custom Type:	

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	100

SpeechSpeedVsAccuracy

Property Name	Value
Description:	Tunes the engine towards Performance or Accuracy. A higher value for this setting means faster matches that may be less accurate. A lower value for this setting means more accurate matches along with more processing and higher CPU utilization.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SpeechSpeedVsAccuracy
Primary Key:	False
Allow Null:	False
Default Value:	50
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	100

Speed

Property Name	Value
Description:	The audio speed Cisco Unity Connection uses to play back messages to the subscriber.
Notes:	A value between 0 and 200 is allowed. Normal speed, the speed at which messages are recorded is a value of 100. Twice as fast as normal speed is a value of 200. Half as fast as normal speed is a value of 50.

Property Name	Value
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.Speed
Primary Key:	False
Allow Null:	False
Default Value:	100
Custom Type:	
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	200

State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.State
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

SynchScheduleObjectId

Property Name	Value
Description:	The unique identifier of the Schedule object to use for synchronization Calendar information from groupware (such as Exchange).
Notes:	Created for each subscriber at creation time. We allow NULL though, because we must create the schedule after the subscriber is created.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.SynchScheduleObjectId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	<p>The TimeZone value refers to an entry in the table tbl_TimeZone.</p> <p>By default this value is NULL, which means the user is in the same time zone as the VMS on which their account resides. If, however, a user is checking messages from another time zone, this value can be set to associate them with any time zone.</p> <p>Since messages are all stored with time stamps in Universal Time Coordinated (UTC), Unity translates the times into the appropriate time zone on the fly when users are checking messages in the same way an email client does when showing you your inbox.</p>
Business Rules:	
Developer Notes:	In versions prior to Cisco Unity Connection, the bias was stored in the lower 16-bits of the integer and the upper 16-bits was reserved for an identifier.
Table/Column Mapping:	tbl_User.TimeZone
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	

Property Name	Value
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Undeetable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	Values: 0: Can be deleted 1: Cannot be deleted
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Undeetable
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UpdateBroadcastMsg

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	Values: 0: Cannot update broadcast messages. 1: Can update broadcast messages.
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.UpdateBroadcastMsg
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseBriefPrompts

Property Name	Value
Description:	A flag indicating whether the subscriber hears brief or full phone menus when accessing Cisco Unity Connection over the phone.
Notes:	Typically, as subscribers become more experienced with the system, they switch from full to brief menus to speed up the conversation. Values: 0: Turns brief menus off (full phone menus on). 1: Turns brief menus on.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.UseBriefPrompts
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultLanguage

Property Name	Value
Description:	Set to true (1) if call handler is using default language from the location it belongs to.
Notes:	Always use the Language column - if this is set, then the column Language is being derived directly from the location.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultTimeZone

Property Name	Value
Description:	Set to true (1) if the TimeZone is derived from the location to which this call handler belongs.
Notes:	Always use the TimeZone column, this is just an indicator as to whether or not it is set here specifically or is coming from the location.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	

Property Name	Value
Validation - Maximum Value:	

UseVui

Property Name	Value
Description:	A flag indicating whether the speech recognition conversation is the default conversation for the subscriber.
Notes:	<p>Values:</p> <p>0: Speech recognition conversation is not default conversation for the subscriber.</p> <p>1: Speech recognition conversation is the default conversation for the subscriber.</p> <p>This is different from the VUI class of service which indicates that the subscriber is allowed to use the VUI conversation.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.UseVui
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	Clients will retrieve the path via a url, but the url-path is constructed from the file name dynamically.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_StreamFile.FileName
Primary Key:	False
Allow Null:	False

Property Name	Value
Default Value:	
Custom Type:	FileNameGuid
SQL Data Type/Length:	varchar (40 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

VoiceNameRequired

Property Name	Value
Description:	A flag indicating whether a recorded voice name is required for this subscriber.
Notes:	Set to true (1) to force subscriber to record a voice name. Values: 0: Recorded voice name not required. 1: Recorded voice name is required. Subscriber required to record a voice name at next login.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.VoiceNameRequired
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Volume

Property Name	Value
Description:	The audio volume expressed as a percentage that Cisco Unity Connection uses to play back message.

Property Name	Value
Notes:	<p>A value between 0 and 100 is allowed.</p> <p>Normal volume, the volume used to record a message is a value of 50.</p> <p>Twice as loud is a value of 100.</p> <p>Half as loud as normal volume is a value of 25.</p> <p>Note that the value is only used for message play back, not for other parts of the conversation.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserSubscriber.Volume
Primary Key:	False
Allow Null:	False
Default Value:	50
Custom Type:	Volume
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	100

WarningQuota

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	<p>Values:</p> <p>-2: The default system quota is assigned.</p> <p>-1: The quota is unlimited.</p> <p>1- n : Limit in bytes.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.WarningQuota
Primary Key:	False
Allow Null:	False
Default Value:	-2
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	

Property Name	Value
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

5.182. vw_TaskContext

A simple view for tbl_TaskContext.

A collection of named-value pairs associated with a task.

Additional Information

The primary purpose of this table is to provide a mechanism for clients so that they can optionally specify task-specific information to be used when tasks are executed. There can be N pairs per task.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
PK	Name	varchar (64 characters)	The text name for the name value pair.	
PK	TaskPeriodicObjectId	char (36 characters)	The unique identifier of the TaskPeriodic object to which this named-value pair applies.	ObjectID
	Value	nvarchar (255 characters)	The value for the name, value pair.	

Stored Procedures

Name	Description
csp_TaskContextCreate	Creates a new TaskContext object by inserting a new row into tbl_TaskContext.
csp_TaskContextDelete	Deletes a TaskContext object from tbl_TaskContext as specified by the combination of the @Name and TaskPeriodicObjectId parameters.

Column Properties

Name

Property Name	Value
Description:	The text name for the name value pair.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskContext.Name
Primary Key:	True

Property Name	Value
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	varchar (64 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TaskPeriodicObjectId

Property Name	Value
Description:	The unique identifier of the TaskPeriodic object to which this named-value pair applies.
Notes:	FK to the tbl_TaskPeriodic
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskContext.TaskPeriodicObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Value

Property Name	Value
Description:	The value for the name, value pair.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_TaskContext.Value
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

5.183. vw_TaskDefinition

A simple view for tbl_TaskDefinition.
A task that might be run on the system.

Additional Information

This table is used by the SA and SysAgent to run periodic and ad-hoc tasks

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
PK	ClassName	varchar (255 characters)	The full name of the java class to load when running this task.	
	DisplayNameKey	varchar (255 characters)	A key into the localized text table, which provides a display name for this task.	
	IsAdHoc	smallint (2 bytes)	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.	Bool
	Summary	nvarchar (255 characters)	A summary of the task used for display purposes.	

Stored Procedures

Name	Description
csp_TaskDefinitionCreate	Creates a new TaskDefinition object by inserting a new row into tbl_TaskDefinition.
csp_TaskDefinitionDelete	Deletes a TaskDefinition object from tbl_TaskDefinition as specified by the combination of the @ClassName and @DisplayNameKey parameters.
csp_TaskDefinitionModify	Updates the attributes of a TaskDefinition object based on the values passed in via the parameters. The @ClassName and @DisplayNameKey parameters identify the TaskDefinition object that is updated.

Column Properties

ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskDefinition.ClassName
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	varchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	255 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DisplayNameKey

Property Name	Value
Description:	A key into the localized text table, which provides a display name for this task.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskDefinition.DisplayNameKey
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	varchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	255 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

IsAdHoc

Property Name	Value
Description:	A flag indicating whether this task should be presented in the SA as a possible Ad-Hoc task to run. Ad Hoc tasks are those which are run "on-demand." They are run one time, and results from the tasks execution are displayed at that time.
Notes:	Values: 0: Not an Ad-Hoc task. 1: This is an Ad-Hoc task.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskDefinition.IsAdHoc
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Summary

Property Name	Value
Description:	A summary of the task used for display purposes.
Notes:	This value is filled in by client applications.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskDefinition.Summary
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

5.184. vw_TaskPeriodic

A simple view for tbl_TaskPeriodic.

A task which can be scheduled to run repeatedly, either by interval (i.e. every 15 minutes), or at a fixed time of day.

Additional Information

The tasks to be run by the SysAgent are stored here. Tasks represent units of processing which the SysAgent manages.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	ClassName	varchar (255 characters)	The full name of the java class to load when running this task.	
	DefaultDelayOnStart	int (4 bytes)	The original setting for DelayOnStart.	
	DefaultIsEnabled	smallint (2 bytes)	The original setting for IsEnabled	Bool
	DefaultPeriod	int (4 bytes)	The original setting for Period.	
	DefaultRunOnStart	smallint (2 bytes)	The original setting for RunOnStart.	Bool
	DefaultSchedExpression	nvarchar (255 characters)	The original setting for SchedExpression.	
	DelayOnStart	int (4 bytes)	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.	
	InstanceDetails	nvarchar (255 characters)	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1	
	IsEnabled	smallint (2 bytes)	A flag indicating whether SysAgent should schedule this periodic task.	Bool
	IsReadOnly	smallint (2 bytes)	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.	Bool
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.	ObjectID
	Period	int (4 bytes)	The interval (in minutes) at which SysAgent will run the task.	
	RunOnStart	smallint (2 bytes)	A flag indicating whether this task will be run during startup.	Bool

Key	Name	SQL Data Type/Length	Description	Custom Type
	SchedExpression	nvarchar (255 characters)	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.	

Stored Procedures

Name	Description
csp_TaskPeriodicCreate	Creates a new TaskPeriodic object by inserting a new row into tbl_TaskPeriodic.
csp_TaskPeriodicDelete	Deletes a TaskPeriodic object from tbl_TaskPeriodic as specified by the @ObjectId parameter.
csp_TaskPeriodicModify	Updates the attributes of a TaskPeriodic object based on the values passed in via the parameters. The @ObjectId identifies the TaskPeriodic object that is updated.

Column Properties

ClassName

Property Name	Value
Description:	The full name of the java class to load when running this task.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.ClassName

Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

DefaultSchedExpression

Property Name	Value
Description:	The original setting for SchedExpression.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.DefaultSchedExpression
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	255 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DelayOnStart

Property Name	Value
Description:	The amount of time (in minutes) to delay before starting a task with a period. This does not apply to tasks using a schedule expression.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.DelayOnStart
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	2147483647

InstanceDetails

Property Name	Value
Description:	A string that may be used to further explain a schedule task. This in conjunction with the TaskDefinition.DisplayName should give the Admin a good idea what this task will be doing. Ex: TaskDefinition.DisplayName - MWI Resync TaskPeriodic.InstanceDetails - Switch #1
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.InstanceDetails
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (255 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

IsEnabled

Property Name	Value
Description:	A flag indicating whether SysAgent should schedule this periodic task.
Notes:	Values: 0: Task will not be scheduled by SysAgent. 1: Task will be scheduled by SysAgent.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.IsEnabled
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

IsReadOnly

Property Name	Value
Description:	A flag to indicate if the SA should allow the schedule information for this periodic task to be edited.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.IsReadOnly
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a TaskPeriodic object.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	

Property Name	Value
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Period

Property Name	Value
Description:	The interval (in minutes) at which SysAgent will run the task.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.Period
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	10
Validation - Maximum Value:	2147483647

RunOnStart

Property Name	Value
Description:	A flag indicating whether this task will be run during startup.

Property Name	Value
Notes:	<p>This flag can be used alone (Period=null and SchedExpression=null) or in conjunction with them.</p> <p>Note that Period=X and RunOnStart=1 is the same as Period=X and RunOnStart=0. All tasks with Period!=null are run on startup and again every x minutes after that.</p> <p>Values: 0: This task is not run at startup 1: Run this task at startup</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TaskPeriodic.RunOnStart
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SchedExpression

Property Name	Value
Description:	The schedule expression used to schedule this task. This includes information such as when to start the task, when to end it and how often to run the task.

Property Name	Value																					
Notes:	<p>More details can be found at: http://quartz.sourceforge.net/javadoc/org/quartz/CronTrigger.html</p> <table><thead><tr><th>Field Name</th><th>Allowed Values</th><th>Allowed Special Characters</th></tr></thead><tbody><tr><td>Seconds</td><td>0-59</td><td>, - * /</td></tr><tr><td>Minutes</td><td>0-59</td><td>, - * /</td></tr><tr><td>Hours</td><td>0-23</td><td>, - * /</td></tr><tr><td>Day-of-month</td><td>1-31</td><td>, - * ? / L W C</td></tr><tr><td>Month</td><td>JAN-DEC</td><td>, - * /</td></tr><tr><td>Day-of-Week</td><td>MON- WED</td><td>, - * ? / L C #</td></tr></tbody></table> <p>EX:</p> <p>"0 0 12 * * ?" 5.185. vw_TimeZone

A simple view for tbl_TimeZone.

Additional Information

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Bias	int (4 bytes)	The number of minutes that need to be subtracted from the Coordinated Universal Time (UTC) to convert to standard time in this time zone.	
	DaylightBias	int (4 bytes)	The number of minutes (negative or positive) that need to be added to a standard local time to convert to daylight savings time. In most timezones, this value is -60 minutes.	
	DaylightEndDayOfWeek	smallint (2 bytes)	The day of week daylight savings ends on (0=Sunday, 6=Saturday).	TimezoneDayOfWeek
	DaylightEndHour	smallint (2 bytes)	The hour of the day expressed in 24-hour clock format (0-23) daylight savings time ends.	
	DaylightEndMonth	smallint (2 bytes)	The month daylight savings begins in (1=January, 12=December).	TimezoneMonth
	DaylightEndWeek	smallint (2 bytes)	The week of the month that daylight savings time ends.	TimezoneWeek
	DaylightStartDay-OfWeek	smallint (2 bytes)	The day of the week daylight savings starts on (0=Sunday, 6=Saturday).	TimezoneDayOfWeek
	DaylightStartHour	smallint (2 bytes)	The hour of the day expressed in 24-hour clock format (0-23) daylight savings time starts.	
	DaylightStartMonth	smallint (2 bytes)	The month daylight savings begins in (1=January, 12=December).	TimezoneMonth
	DaylightStartWeek	smallint (2 bytes)	The week of month that daylight savings time starts.	TimezoneWeek
	DisplayName	nvarchar (1024 characters)	The localized version of the string.	
PK	LanguageCode	int (4 bytes)	The language code (LCID) indicating the language of the text in the LocalizedName column.	Language-Code
PK	TimeZoneId	int (4 bytes)	The unique ID for this time zone entry.	

Stored Procedures

Name	Description
csp_TimeZoneLocalUtc	Converts local time to Coordinated Universal Time (UTC) using the provided timezone identifier.
csp_TimeZoneSet	Sets the time zone for a VMS. It sets the timezone in all user templates, default users, and for the VMS.
csp_TimeZoneUtcLocal	Converts Coordinated Universal Time (UTC) to local time using the provided timezone identifier.

Column Properties

Bias

Property Name	Value
Description:	The number of minutes that need to be subtracted from the Coordinated Universal Time (UTC) to convert to standard time in this time zone.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TimeZone.Bias
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

DaylightBias

Property Name	Value
Description:	The number of minutes (negative or positive) that need to be added to a standard local time to convert to daylight savings time. In most timezones, this value is -60 minutes.
Notes:	Use the start/end dates on daylight savings time to determine if this needs to be added or not.
Business Rules:	

Property Name	Value
Developer Notes:

5.186. vw_TransferOption

View for transfer options of a call handler.

Additional Information

If the switch id is NULL in the table, the switch id of either the call handler or subscriber is used instead.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Action	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.	TransferRule-Action
PK	CallHandlerObjectId	char (36 characters)	The unique identifier of the CallHandler object to which this transfer rule belongs.	ObjectID
	Extension	nvarchar (40 characters)	The extension (phone number) to transfer to.	PhoneNumberE123
	MediaSwitchObjectId	char (36 characters)	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.	ObjectID
	RnaAction	smallint (2 bytes)	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.	CallHandler-RNAAction
	TimeExpires	datetime (8 bytes)	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disable, the value is a past date.	
	TransferAnnounce	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.	Bool
	TransferConfirm	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.	Bool
	TransferDtDetect	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.	Bool
	TransferHoldingMode	smallint (2 bytes)	The action Cisco Unity Connection will take when the extension is busy.	CallHandler-HoldMode

Key	Name	SQL Data Type/Length	Description	Custom Type
	TransferIntroduce	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.	Bool
PK	TransferOptionType	nvarchar (64 characters)	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."	TransferRule-Name
	TransferRings	smallint (2 bytes)	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.	
	TransferScreening	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.	Bool
	TransferType	smallint (2 bytes)	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).	TransferType
	UsePrimaryExtension	smallint (2 bytes)	If extension is null this will be set to 1 (true) to indicate we are using instead the DtmfAccessId for the owning handler or subscriber.	Bool

Stored Procedures

Name	Description
csp_TransferOptionCreate	Creates a new TransferOption object by inserting a new row into tbl_TransferOption.
csp_TransferOptionDelete	Deletes a TransferOption object from tbl_TransferOption as specified by the combination of the @CallHandlerObjectId and @TransferOptionType parameters.
csp_TransferOptionModify	Updates the attributes of a TransferOption object based on the values passed in via the parameters. The @CallHandlerObjectId and @TransferOptionType parameters identify the TransferOption object that is updated.

Column Properties

Action

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection transfers the call to the call handler greeting or attempts to transfer the call to an extension.

Property Name	Value
Notes:	Values: 0: Play greeting - Cisco Unity Connection transfers the call to the call handler greeting. 1: Transfer - Cisco Unity Connection transfers the call to the number in the "Extension" column in tbl_TransferOption.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.Action
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	TransferRuleAction
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this transfer rule belongs.
Notes:	A transfer rule can belong only to a call handler object.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.CallHandlerObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Extension

Property Name	Value
Description:	The extension (phone number) to transfer to.
Notes:	If an administrator using Cisco Unity Connection Administration chooses to transfer to the extension of a subscriber or call handler, Cisco Unity Connection will automatically enter the DtmfAccessId value pulled from the DtmfAccessId table for the call handler into this column.
Business Rules:	<ol style="list-style-type: none"> 1. The default value is the DtmfAccessId of the call handler to which this transfer rule belongs. 2. The valid characters for the extension are digits 0-9, T and t (indicates tone dialing), comma (indicating a pause - not supported if integration is SIP), asterisk (*) and hash (#) characters. This is for backwards compatibility with Unity 4.x.
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.Extension
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	PhoneNumberE123
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[0-9Tt#\[*,]*\$
Validation - Description:	Digits, hash, T or t, comma, asterisk.
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object that Cisco Unity Connection uses for transferring the call to the subscriber phone.
Notes:	<p>Used to support multiple phone system (i.e., switch) integrations.</p> <p>If a call comes in on a PBX, for instance, and a subscriber is on a Call Manager IP phone, Cisco Unity Connection needs to know that to transfer to that subscriber phone it may need to dial a trunk access code to bridge the call across the PBX to the IP phone.</p> <p>FK to tbl_MediaSwitch.ObjectId</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.MediaSwitchObjectId
Primary Key:	False
Allow Null:	True

Property Name	Value
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

RnaAction

Property Name	Value
Description:	The action Cisco Unity Connection takes for a "Ring-No-Answer" (RNA) condition. Cisco Unity Connection will either transfer the call to the appropriate greeting or releases the call to the phone system.
Notes:	<p>This column only applies if the value of the TransferType column is set to supervised (1).</p> <p>Normally, this column is not used. Cisco Unity Connection simply processes the transfer rules if the transfer is RNA.</p> <p>Values: 0: Release - release the call to the phone system. 1: Play greeting - after the number of rings (as defined by "TransferRings" column), pull back the call and transfer the call to the appropriate greeting.</p>
Business Rules:	
Developer Notes:	Unconfirmed information from Unity 4.0(3) data dictionary: Values of 2, 3, and 4 were added for special mobility functionality being released post 4.0(1). These values are only viable on primary call handlers (assigned to subscribers).
Table/Column Mapping:	tbl_TransferOption.RnaAction
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	CallHandlerRNAAction
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeExpires

Property Name	Value
Description:	The date and time when this transfer option expires. If the transfer rule is enabled, the value is NULL or a date in the future. If the transfer rule is disabled, the value is a past date.
Notes:	<p>Rather than use a simple on and off scheme for enabling transfer options and greetings, Cisco Unity Connection employs a date scheme. If the value is NULL or a date in the future then the transfer option is considered enabled. If the date is sometime in the past, then the transfer option is considered disabled.</p> <p>The "Standard" transfer option should never be disabled. For primary call handlers associated with subscribers, the "Alternate" transfer option should always be enabled since subscribers have only one transfer option used currently.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TimeExpires
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferAnnounce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays "transferring call" when the subscriber answers the phone.
Notes:	<p>Requires a "TransferType" of supervised (1).</p> <p>Values: 0: Do not say "Transferring call" when the subscriber answers the phone 1: Say "Transferring call" when the subscriber answers the phone</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferAnnounce
Primary Key:	False
Allow Null:	False

Property Name	Value
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferConfirm

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection prompts the subscriber to accept or refuse a call ("Press 1 to take the call or 2 and I'll take a message"). If the call is accepted, it is transferred to the subscriber phone. If the call is refused, Cisco Unity Connection plays the applicable subscriber greeting.
Notes:	Requires a "TransferType" of supervised (1). Typically this is used in conjunction with the call screening option ("TransferScreening" column) enabled. This combination enables the subscriber to hear the name of the caller and then decide if they want to take the call or not. Values: 0: Transfer confirm disabled 1: Transfer confirm enabled
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferConfirm
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferDtDetect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will check for dialtone before attempting to transfer the call.
Notes:	Requires a "TransferType" of supervised (1). This is usually used for phone systems that do not have "positive disconnect" capabilities to avoid sending terminated calls to the operator console, for instance. Values: 0: Do not check for dialtone prior to transferring a call 1: Check for dialtone prior to transferring a call
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferDtDetect
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferHoldingMode

Property Name	Value
Description:	The action Cisco Unity Connection will take when the extension is busy.
Notes:	Requires a TransferType column value = "Supervised" (1). Values: 0: No - Cisco Unity Connection prompts the caller to leave a message and allows the caller to dial another extension. 1: Yes - Cisco Unity Connection plays a prompt indicating that the extension is busy. The caller is put on hold. Note that this hold is not performed by the phone system. 2: Ask - Cisco Unity Connection gives the caller the options of holding, leaving a message, or dialing another extension.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferHoldingMode

Property Name	Value
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	CallHandlerHoldMode
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferIntroduce

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will say "call for <recorded name of the call handler>" when the subscriber answers the phone.
Notes:	Requires a "TransferType" of supervised (1). This functionality is normally used when a single extension number is being shared by multiple subscribers or a scenario where the subscriber who is the message recipient takes calls for more than one dialed extension. The introduction alerts the subscriber who answers that the call is for the call handler.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferIntroduce
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferOptionType

Property Name	Value
Description:	The type of transfer option, e.g. "Standard," "Off Hours," or "Alternate."
Notes:	Values: Alternate: Alternate - in effect at all times, overrides standard and offhours. Off Hours: Off hours - off or closed hours based on specified schedule. Standard: Standard - standard hours based on specified schedule.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferOptionType
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	TransferRuleName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferRings

Property Name	Value
Description:	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Notes:	Applies only when the "TransferType" column is set to supervised (1). This value should never be less than 2 for a supervised transfer.
Business Rules:	The value of this column should never be less than 2 for a supervised transfer.
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferRings
Primary Key:	False
Allow Null:	False
Default Value:	4
Custom Type:	
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	

Property Name	Value
Validation - Minimum Value:	2
Validation - Maximum Value:	19

TransferScreening

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will prompt callers to say their names. When the phone is answered, the subscriber hears "Call from..." before Cisco Unity Connection transfers the call.
Notes:	Requires a "TransferType" of supervised (1). Normally this column is used along with "TransferConfirm" to allow the subscriber to screen calls. Values: 0: Call screening disabled 1: Ask and record caller name
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferScreening
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TransferType

Property Name	Value
Description:	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).

Property Name	Value
Notes:	Values: 0: Unsupervised (release) transfer - just let the switch do the transfer, and do not stay on the line and take action on RNA or busy. 1: Supervised transfer - listen for busy, ring no answer.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TransferOption.TransferType
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	TransferType
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UsePrimaryExtension

Property Name	Value
Description:	If extension is null this will be set to 1 (true) to indicate we are using instead the DtmfAccessId for the owning handler or subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

5.187. vw_TreeControlNode

A simple view for tbl_TreeControlNode.
A node of a tree control menu.

Additional Information

This table defines all of the nodes of a tree control menu, which is used by the Cisco Unity Connection Administration.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Action	nvarchar (255 characters)	The URL for the href attribute of the tree node when rendered.	
	DisplayOrder	int (4 bytes)	The order in which the nodes are displayed. An index value.	
	Expanded	smallint (2 bytes)	A flag indicating whether this node should be expanded by default.	Bool
	Icon	nvarchar (255 characters)	A Uniform Resource Identifier (URI) containing the internet address to an image.	
	Label	nvarchar (128 characters)	The label is used to localize the displayable text for the node, it could be the name of a Java ResourceBundle key, or a String literal.	
	NodeName	nvarchar (50 characters)	The name of this node.	
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a TreeControl object (node).	ObjectID
	ParentObjectId	char (36 characters)	The unique identifier of the parent Node to which this node belongs.	ObjectID
	Target	nvarchar (255 characters)	The target HTML frame for the Action request - e.g. when the Action for the tree node is executed it is rendered in the frame specified by this attribute.	
	Tooltip	nvarchar (100 characters)	A tool tip for menu item.	

Stored Procedures

vw_TreeControlNode has no stored procedures.

Column Properties

Action

Property Name	Value
Description:	The URL for the href attribute of the tree node when rendered.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_TreeControlNode.Action
Primary Key:	False
Allow Null:	True
Default Value:	NULL

5.188. vw_User

Contains the account data and contact information of persons who have an account on the system and who can logon to the system. A person must have a user account on the system in order to logon and gain access system services such as a subscription to a voice mailbox.

Additional Information

This view is comprised of all the columns in the tbl_User table. User accounts that are identified as a template (i.e., IsTemplate=True) are NOT included in the view.

A Cisco Unity Connection user is not required to have a voice mail subscription or mailbox assigned to the user's account.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Address	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.	
	Alias	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.	Alias
	AltFirstName	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.	AltName
	AltLastName	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.	AltName
	BillingId	nvarchar (32 characters)	Accounting information or project code associated with this user.	
	Building	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).	
	CcmId	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager	
	CcmIdType	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)	CcmIdType
	City	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.	
	CosObjectId	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.	ObjectID

Key	Name	SQL Data Type/Length	Description	Custom Type
	Country	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.	
	CreationTime	datetime (8 bytes)	The date and time the user account was created.	
	Department	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.	
	DirectoryId	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).	DirectoryId
	DisplayName	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.	TextName
	DtmfAccessId	nvarchar (40 characters)	The dialable number.	DtmfAccessId
	DtmfNameFirst	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameFirstLast	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name followed by the last name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameLast	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameLastFirst	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name followed by the first name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	EmailAddress	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.	EmailAddress
	EmployeeId	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.	
	EnhancedSecurityAlias	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.	
	FirstName	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.	Name
	Initials	nvarchar (12 characters)	The initial letters of some or all of the names of this user.	
	IsTemplate	smallint (2 bytes)	A flag indicating whether this instance of a User object is a "template" for creating new users.	Bool

Key	Name	SQL Data Type/Length	Description	Custom Type
	Language	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.	Language-Code
	LastName	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.	Name
	LocationObjectId	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.	ObjectID
	MailboxDn	lvarchar (392 characters)	The distinguished name of the mailbox.	
	Manager	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.	
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.	ObjectID
	PabLastImported	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.	
	PostalCode	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.	
	ReadOnly	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.	Bool
	RouteNDRToSender	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.	Bool
	SmtptAddress	lvarchar (320 characters)	SMTP address	SmtptAddress
	State	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.	
	TimeZone	int (4 bytes)	The time zone to which this user account is associated.	
	Title	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'	
	Undeleteable	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.	Bool
	UseDefaultLanguage	smallint (2 bytes)	A flag indicating whether the language for this user is derived from the user object attribute or the default language from the location to which the user belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.	Bool

Key	Name	SQL Data Type/Length	Description	Custom Type
	UseDefaultTimeZone	smallint (2 bytes)	A flag indicating whether the timezone for this user is derived from the user object attribute or the default timezone from the location to which the user belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.	Bool
	VoiceName	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.	FileNameGuid

Stored Procedures

Name	Description
csp_UserCreate	Creates a new User account from a user template by inserting a new row into tbl_User.
csp_UserDelete	Deletes a User object from tbl_User as specified by the @ObjectId parameter.
csp_UserModify	Updates the attributes of a User account based on the values passed in via the parameters. The @ObjectId identifies the User object in tbl_User that is updated.

Column Properties

Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	This address may not necessarily be the same as the address where the user receives letters or parcels (i.e. postal address). This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Address
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (128 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or unicode character.

Property Name	Value
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	128 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	To ensure that the Alias for a PersonalGroup is unique, it is constructed as follows: <UserAlias> + '_' + <PersonalGroupObjectId>. UserAlias is truncated to 28 characters to avoid overflow.
Business Rules:	Must be unique within a location.
Developer Notes:	
Table/Column Mapping:	tbl_Alias.Alias
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Alias
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except non-printing ASCII characters.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	Used to enable name lookup and message addressing via the TUI client when the primary user firstname contains characters not supported by a touch-tone keypad. For example, if the system language is Japanese and user names are stored as Kanji characters, to enable users and callers to search for a user name via the phone, an alternate spelling of the user name in ASCII characters can be stored in the altfirstname column.
Business Rules:	
Developer Notes:	

Property Name	Value
Table/Column Mapping:	tbl_User.AltFirstName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	AltName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[a-zA-Z0-9]*\$
Validation - Description:	ASCII alphabetical or numeric character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	Used to enable name lookup and message addressing via the TUI client when the primary user lastname contains characters not supported by a touch-tone keypad. For example, if the system language is Japanese and user names are stored as Kanji characters, to enable users and callers to search for a user name via the phone, an alternate spelling of the user name in ASCII characters can be stored in the altlastname column.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.AltLastName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	AltName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[a-zA-Z0-9]*\$
Validation - Description:	ASCII alphabetical or numeric character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	The BillingID can be used in report generation to group call activity for subscribers. For example, to group the call activity for all subscriber in the same department or those subscribers who are part of the same billing group on a phone system.
Business Rules:	If a BillingID exists for a user, it is logged for all phone activity for a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.BillingId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (32 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or Unicode character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	32 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Building
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	

Property Name	Value
Validation - Maximum Value:	

CcmId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	See CcmIdType to determine what type of object this refers to.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CcmId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (128 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any non-printable character
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

CcmIdType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	Values: 0: End User 1: Application User (such as Unity) 2: Directory Number
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CcmIdType
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	CcmIdType
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	PA Speech Enabled Name Dialing uses 'city' as a disambiguation method when duplicate names are present.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.City
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	The Class of Service (COS) specifies the features for which a user is licensed and limits such as recording limits. See tbl_COS table for more details.

Property Name	Value
Business Rules:	A user object is not required to have a COS associated with it. For example, a user who does not have any subscriptions to services such as voice mail or PA would not have a COS.
Developer Notes:	
Table/Column Mapping:	tbl_User.CosObjectId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Country
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (2 characters)
Validation - Expression:	^[a-zA-Z]*\$
Validation - Description:	ASCII lower or upper case alphabetical character only.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	2 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CreationTime

Property Name	Value
Description:	The date and time the user account was created.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CreationTime
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Department
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	Exactly what is stored here changes depending on the directory.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.DirectoryId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DirectoryId
SQL Data Type/Length:	lvarchar (2048 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	2048 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	The DisplayName is not used to generate the spelled names for voice mail subscriptions, the first and last names are used for that purpose.
Business Rules:	<p>The rule for automatically generating the displayname uses the User "FirstName" and "LastName" columns.</p> <p>If neither the User firstname or lastname columns are populated, the displayname shall be composed using the User "Alias" column.</p>
Developer Notes:	
Table/Column Mapping:	tbl_User.DisplayName
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	TextName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters

Property Name	Value
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_DtmfAccessId.DtmfAccessId
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	DtmfAccessId
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[a-zA-Z0-9\-_\.\@,;\+\\ \%\'?\(\)\~*]*\$
Validation - Description:	Any valid DTMF or SIP address - see "PhoneNumber" custom type for more information.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameFirst

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name of the user. These digits are used for searching the user by name via the phone.
Notes:	
Business Rules:	When the first name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameFirst
Primary Key:	False
Allow Null:	True
Default Value:	NULL

Property Name	Value
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameFirstLast

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name followed by the last name of the user. These digits are used for searching the user by name via the phone.
Notes:	The digits corresponding to the user first name are first, followed by the digits corresponding to the user last name until the maximum length of this column (16 digits) is reached. The maximum length of this column is less than either the maximum length of either the user first or last name columns. For example, if a user name is Vibhavaree Gargeya and assuming a standard keypad mapping, this column would contain the digits: 8424282733427439
Business Rules:	When the first or last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameFirstLast
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameLast

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name of the user. These digits are used for searching the user by name via the phone.
Notes:	
Business Rules:	When the last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameLast
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameLastFirst

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name followed by the first name of the user. These digits are used for searching the user by name via the phone.
Notes:	The digits corresponding to the user last name are first, followed by the digits corresponding to the user first name until the maximum length of this column (16 digits) is reached. The maximum length of this column is less than either the maximum length of the user last or first name columns. For example, if a user name is Vibhavaree Gargeya and assuming a standard keypad mapping, this column would contain the digits: 4274392842428273
Business Rules:	When the last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameLastFirst
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$

Property Name	Value
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	Not auto-generated.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.EmailAddress
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	EmailAddress
SQL Data Type/Length:	lvarchar (320 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	320 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.EmployeeId
Primary Key:	False
Allow Null:	True

Property Name	Value
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	The COS that the user belongs to must have Enhanced Security enabled. If the COS that the user belongs to has Enhanced Security enabled, and this column is blank, then the SignIn conversation uses the user alias column instead.
Business Rules:	
Developer Notes:	The Enhanced Security feature (i.e., RSA two-factor security) is not a requirement for Cisco Unity Connection.
Table/Column Mapping:	tbl_User.EnhancedSecurityAlias
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (50 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	50 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.

Property Name	Value
Notes:	The firstname can be stored in the native language and character set of the system, such as Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI name lookup purposes.
Business Rules:	This column is optional - not required to create a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.FirstName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	Name
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Initials
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (12 characters)
Validation - Expression:	^[p{L}\p{Digit}~!@#%&^&-_{} \.,']*
Validation - Description:	Any alphabetical or numeric character (ANSI or Unicode); special ASCII characters ` , ~ , ! , @ , # , \$, % , ^ , & , - , _ , ' , period, comma, and space.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	6 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

IsTemplate

Property Name	Value
Description:	A flag indicating whether this instance of a User object is a "template" for creating new users.
Notes:	Used to provide default values for selected columns when creating new users. Example: In a corporate campus environment, an administrator can create a user template for each building that is prepopulated with the address information (address, building, city, state, postalcode, timezone, etc.) for the particular building.
Business Rules:	Cannot be modified.
Developer Notes:	
Table/Column Mapping:	tbl_User.IsTemplate
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.

Property Name	Value
Notes:	<p>NULL is not allowed because the subscriber language cannot be inherited. See customtype "LanguageCode" for more information.</p> <p>There is another language value for a subscriber that outside callers hear when they call this subscriber. This is set on the primary call handler for this subscriber and CAN be set to NULL for Inherited.</p> <p>Values:</p> <p>10241: Arabic_Syria 10241 10249: English_Belize 10249 1025: Arabic_Saudi_Arabia 1025 10250: Spanish_Peru 10250 1026: Bulgarian 1026 1027: Catalan 1027 1028: Chinese_Taiwan 1028 1029: Czech 1029 1030: Danish 1030 1031: German_Standard 1031 1032: Greek 1032 1033: English_United_States 1033 1034: Spanish_Traditional_Sort 1034 1035: Finnish 1035 1036: French_Standard 1036 1037: Hebrew 1037 1038: Hungarian 1038 1039: Icelandic 1039 1040: Italian_Standard 1040 1041: Japanese 1041 1042: Korean 1042 1043: Dutch_Standard 1043 1044: Norwegian_Bokmal 1044 1045: Polish 1045 1046: Portuguese_Brazilian 1046 1047: Rhaeto-Romanic 1047 1048: Romanian 1048 1049: Russian 1049 1050: Croatian 1050 1051: Slovak 1051 1052: Albanian 1052 1053: Swedish 1053 1054: Thai 1054 1055: Turkish 1055 1056: Urdu 1056 1057: Indonesian 1057 1058: Ukrainian 1058 1059: Belarusian 1059 1060: Slovenian 1060 1061: Estonian 1061 1062: Latvian 1062 1063: Lithuanian 1063 1065: Farsi 1065 1066: Vietnamese 1066 1067: Armenian 1067 1068: Azeri_Latin 1068 1069: Basque 1069</p>

Business Rules:	The default value for this column is derived from the user template.
Developer Notes:	Allowing NULL now.
Table/Column Mapping:	tbl_User.Language
Primary Key:	False
Allow Null:	True
Default Value:	NULL

Property Name	Value
Custom Type:	LanguageCode
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	The lastname can be stored in the native language and character set of the system, such as Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI name lookup purposes.
Business Rules:	This column is optional - not required to create a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.LastName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	Name
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_User.LocationObjectId
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	ObjectId
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	Identifies a mailbox in foreign email system for use in synchronizing information stored there, such as calendar information for personal rules.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.MailboxDn
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (392 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	392 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Manager
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_User.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PabLastImported
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	A specific format for zip or postal codes is not required since these items differ so widely and can change at any time. This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PostalCode
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters

Property Name	Value
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	Normally used only for system objects.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.ReadOnly
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	<p>Values:</p> <p>0: Cisco Unity Connection will not route an NDR to the sender's mailbox. Rather Cisco Unity Connection will delete the NDR.</p> <p>1: Cisco Unity Connection will route an NDR to the sender's mailbox when the message is undeliverable. The NDR message will be presented in the new message stack. Cisco Unity Connection will activate the MWI similar to new voice messages. Cisco Unity Connection will also notify based on subscriber notification device settings when new NDR's are present in the subscriber mailbox similar to new voice messages.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.RouteNDRToSender

Property Name	Value
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SmtAddress

Property Name	Value
Description:	SMTP address
Notes:	<p>For performance, we store the SMTP address which for users, contacts, and DLs is a combination of Alias (or MailName if Alias is non-ASCII such as in the case where Alias is in Japanese) and the Location.SmtDomain associated to which this Alias object belongs.</p> <p>The SmtAddress for a PersonalGroup is formed differently: <UserAlias> + '_' + 'List' + '_' + <NumericId> + '@' + <Domain>. For example, if JSmith creates a PersonalGroup with NumericId of 1, the SmtAddress would be: JSmith_List_1@cisco.com</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_Alias.SmtAddress
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	SmtAddress
SQL Data Type/Length:	lvarchar (320 characters)
Validation - Expression:	^([w\!#\$%&'*/+=?^{\} \~]+([\.]?[w\!#\$%&'*/+=?^{\} \~]+)*)+@((([a-zA-Z]([a-zA-Z\d]*[a-zA-Z\d])?.)+([a-zA-Z\d])+)\$

Property Name	Value
Validation - Description:	SMTP Address= Local-Part '@' Domain Name where Local-Part (Max size : 64) * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character '.' is allowed but it cannot be the first or last character in the local-part. Also there cannot be consecutive periods. For example: a..b@c is invalid. <domain> ::= <subdomain> " " <subdomain> ::= <label> <subdomain> "." <label> <label> ::= <letter> [[<ldh-str>] <let-dig>] <ldh-str> ::= <let-dig-hyp> <let-dig-hyp> <ldh-str> <let-dig-hyp> ::= <let-dig> "-" label must start with a letter, end with a letter or digit, and have as interior characters only letters, digits, and hyphen.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	320 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.State
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	<p>The TimeZone value refers to an entry in the table tbl_TimeZone.</p> <p>By default this value is NULL, which means the user is in the same time zone as the VMS on which their account resides. If, however, a user is checking messages from another time zone, this value can be set to associate them with any time zone.</p> <p>Since messages are all stored with time stamps in Universal Time Coordinated (UTC), Unity translates the times into the appropriate time zone on the fly when users are checking messages in the same way an email client does when showing you your inbox.</p>
Business Rules:	
Developer Notes:	In versions prior to Cisco Unity Connection, the bias was stored in the lower 16-bits of the integer and the upper 16-bits was reserved for an identifier.
Table/Column Mapping:	tbl_User.TimeZone
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Title
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.

Property Name	Value
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	Values: 0: Can be deleted 1: Cannot be deleted
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Undeletable
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultLanguage

Property Name	Value
Description:	A flag indicating whether the language for this user is derived from the user object attribute or the default language from the location to which the user belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.
Notes:	Values: 0: The language is the default language defined for the user. 1: The language is derived from the location to which this user belongs.

Property Name	Value
Business Rules:	If the value of the Language attribute in the User table is NULL, then use the language from the location to which this user belongs. Otherwise the language as specified by the value of the tbl_User.Language is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultTimeZone

Property Name	Value
Description:	A flag indicating whether the timezone for this user is derived from the user object attribute or the default timezone from the location to which the user belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.
Notes:	Values: 0: The time zone is the default timezone defined for the user. 1: The time zone is derived from the location to which this user belongs.
Business Rules:	If the value of the Timezone attribute in the User table is NULL, then use the timezone from the location to which this user belongs. Otherwise the timezone as specified by the value of the tbl_User.Timezone is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	Clients will retrieve the path via a url, but the url-path is constructed from the file name dynamically.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_StreamFile.FileName
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	FileNameGuid
SQL Data Type/Length:	varchar (40 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

5.189. vw_UserCredentialHistory

Simple view for tbl_UserCredentialHistory
A history of user credentials. A change is recorded for each creation or change of a user credential, e.g. PIN or password.

Additional Information

This data is used to prevent former user credentials from being reused when a new credential is created, if desired.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
PK	ChangeId	int (4 bytes)	A historical index of credential changes. Allows the fetching of the last 'n' credentials, if desired.	
	Credentials	varchar (254 characters)	The credential, e.g., PIN or password created by this change. Credentials can be an encoded PIN or password.	
PK	CredentialType	int (4 bytes)	The type of credential such as a password or PIN.	Credential-Type
	TimeChanged	datetime (8 bytes)	The date and time the credential was created or changed.	
PK	UserObjectId	char (36 characters)	The unique identifier of the User object for which this credential change occurred.	ObjectID

Stored Procedures

Name	Description
csp_CredentialHistoryClear	Clears the credential history for a user.

Column Properties

ChangeId

Property Name	Value
Description:	A historical index of credential changes. Allows the fetching of the last 'n' credentials, if desired.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	The maximum value is the maximum value allowed by the data type.
Table/Column Mapping:	tbl_UserCredentialHistory.ChangeId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Credentials

Property Name	Value
Description:	The credential, e.g., PIN or password created by this change. Credentials can be an encoded PIN or password.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserCredentialHistory.Credentials
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	varchar (254 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	256 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CredentialType

Property Name	Value
Description:	The type of credential such as a password or PIN.
Notes:	Values: 1: Windows credential. 2: Domino credential. 3: Password (such as would be used with a GUI client). 4: PIN (as would be used over the phone via the TUI).
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserCredentialHistory.CredentialType
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	CredentialType
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeChanged

Property Name	Value
Description:	The date and time the credential was created or changed.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserCredentialHistory.TimeChanged
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UserObjectId

Property Name	Value
Description:	The unique identifier of the User object for which this credential change occurred.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserCredentialHistory.UserObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

5.190. vw_UserMailboxMap

Provides the mailbox information (server, database, mailbox id) for all of a user's mailboxes.

Additional Information

This view is comprised of all the columns in the tbl_MailboxMap and tbl_MailboxStoreMap tables.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	DialString	nvarchar (40 characters)	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.	PhoneNumberE123
	IsPrimary	smallint (2 bytes)	A flag indicating whether this mailbox is the primary mailbox of the user.	Bool
	LastGuiAccessTime	datetime (8 bytes)	The last time the user accessed their this mailbox through the GUI.	
	LastTuiAccessTime	datetime (8 bytes)	The last time the user accessed their this mailbox through the TUI.	
PK	MailboxId	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.	
	MailboxLoginType	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)	MailboxLoginType
	MailboxPassword	varchar (254 characters)	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.	
PK	MailboxStoreObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.	ObjectID
	MailboxStoreType	int (4 bytes)	The type of mailbox store (e.g., UMSS).	MailboxStoreType
	MailDatabase	lvarchar (512 characters)	The name of the mailbox database, such as "UnityMbxDb1."	
	MailDbInstance	lvarchar (256 characters)	The name of the dbinstance on which the mailbox store resides.	
	MailServer	lvarchar (256 characters)	The name of the server on which the mailbox store resides.	
	MailStoreMounted	smallint (2 bytes)	A flag indicating whether the mailbox store is mounted.	Bool
	RequiredSecurity	int (4 bytes)	The method of encryption that Cisco Unity Connection will use on a mailstore connection.	MailstoreConnectionEncryption

Key	Name	SQL Data Type/Length	Description	Custom Type
	RouteNDRTosender	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.	Bool
	ServiceAlias	lvarchar (256 characters)	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.	
	ServicePassword	varchar (254 characters)	The password for a service to use to logon to mailbox store for message retrieval.	
PK	UserObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.	ObjectID

Stored Procedures

vw_UserMailboxMap has no stored procedures.

Column Properties

DialString

Property Name	Value
Description:	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Notes:	Valid only for a MeetingPlace Express external service.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.DialString
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	PhoneNumberE123
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[0-9Tt#\[*,]*\$
Validation - Description:	Digits, hash, T or t, comma, asterisk.
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

IsPrimary

Property Name	Value
Description:	A flag indicating whether this mailbox is the primary mailbox of the user.
Notes:	
Business Rules:	User must have one and only one primary mailbox.
Developer Notes:	In the future, users will be allowed to have more than a single mailbox.
Table/Column Mapping:	tbl_MailboxMap.IsPrimary
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

LastGuiAccessTime

Property Name	Value
Description:	The last time the user accessed their this mailbox through the GUI.
Notes:	A NULL value indicates the mailbox has never been access via the GUI. Timestamp stored in GMT.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.LastGuiAccessTime
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

LastTuiAccessTime

Property Name	Value
Description:	The last time the user accessed their this mailbox through the TUI.
Notes:	A NULL value indicates the mailbox has never been access via the TUI. Timestamp stored in GMT.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.LastTuiAccessTime
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	For users with mailboxes on UMSS, the objectid of the UMSS mailbox object is contained here. For users with mailboxes on an other mail store such as Exchange or Domino, the user's legacy Exchange DN or primary SMTP address is stored here.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.MailboxId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (110 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	110 characters
Validation - Minimum Value:	

Property Name	Value
Validation - Maximum Value:	

MailboxLoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Notes:	Applies only to MPE currently. Values: 0: Users alias used for login 1: Login as guest 2: Login using mailboxid (or part of it)
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.MailboxLoginType
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	MailboxLoginType
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxPassword

Property Name	Value
Description:	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.
Notes:	Encrypted/decrypted by clients.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.MailboxPassword
Primary Key:	False
Allow Null:	True
Default Value:	NULL

Property Name	Value
Custom Type:	
SQL Data Type/Length:	varchar (254 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxStoreObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxStoreType

Property Name	Value
Description:	The type of mailbox store (e.g., UMSS).

Property Name	Value
Notes:	Values: 0: UMSS - Cisco Unity Connection message store solution. 1: IMAP - external, non-UMSS, mailstore accessed via IMAP. 2: POP3 - external, non-UMSS, mailstore accessed via POP3. 3: WebDAV - used to retrieve personal contacts (although could potentially be used to get messages) 4: Used by the Common Calendaring Library to retrieve calendaring and meeting information from the Meeting Place Express web service.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.MailboxStoreType
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	MailboxStoreType
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MailDatabase

Property Name	Value
Description:	The name of the mailbox database, such as "UnityMbxDb1."
Notes:	A VMS can contain multiple mailbox databases. For UMSS, all the mailbox databases are a single instance of SqlServer, but each mailbox database must have a unique name. For UMSS, mailbox database is a conceptual grouping of a Mail Information Store and a Mail Attachment Store pair. Voice message header information is stored within the Mail Information Store, while Voice Message Attachment information is stored the Mail Attachment store. See UMSS section of the data dictionary for more information.
Business Rules:	
Developer Notes:	For external IMAP mailstores this value will be NULL.
Table/Column Mapping:	tbl_MailboxStoreMap.MailDatabase
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	lvarchar (512 characters)
Validation - Expression:	

Property Name	Value
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	512 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailDbInstance

Property Name	Value
Description:	The name of the dbinstance on which the mailbox store resides.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.DbInstance
Primary Key:	False
Allow Null:	False
Default Value:	ciscountry
Custom Type:	
SQL Data Type/Length:	lvarchar (256 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MailServer

Property Name	Value
Description:	The name of the server on which the mailbox store resides.
Notes:	For UMSS, the server name within the VMS configuration.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.Server
Primary Key:	False
Allow Null:	False
Default Value:	

Property Name	Value
Custom Type:	
SQL Data Type/Length:	nvarchar (256 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	256 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailStoreMounted

Property Name	Value
Description:	A flag indicating whether the mailbox store is mounted.
Notes:	Clients should check this setting before accessing the mailbox store database. Tools can set it to denote that a mailbox store is offline when offline database maintenance needs to be performed.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.Mounted
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RequiredSecurity

Property Name	Value
Description:	The method of encryption that Cisco Unity Connection will use on a mailstore connection.

Property Name	Value
Notes:	Values: 0: No encryption. 1: TLS level encryption. 2: SSL encryption. 3: IPSec encryption.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.RequiredSecurity
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	MailstoreConnectionEncryption
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	Values: 0: Cisco Unity Connection will not route an NDR to the sender's mailbox. Rather Cisco Unity Connection will delete the NDR. 1: Cisco Unity Connection will route an NDR to the sender's mailbox when the message is undeliverable. The NDR message will be presented in the new message stack. Cisco Unity Connection will activate the MWI similar to new voice messages. Cisco Unity Connection will also notify based on subscriber notification device settings when new NDR's are present in the subscriber mailbox similar to new voice messages.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.RouteNDRToSender
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	

Property Name	Value
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ServiceAlias

Property Name	Value
Description:	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.
Notes:	Must have access to all users messages ("superuser").
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.ServiceAlias
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	lvarchar (256 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ServicePassword

Property Name	Value
Description:	The password for a service to use to logon to mailbox store for message retrieval.
Notes:	Encrypted/decrypted by clients.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxStoreMap.ServicePassword
Primary Key:	False
Allow Null:	True
Default Value:	NULL

Property Name	Value
Custom Type:	
SQL Data Type/Length:	varchar (254 characters)
Validation - Expression:

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Address	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.	
	Alias	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.	Alias
	AltFirstName	nvarchar (64 characters)	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.	AltName
	AltLastName	nvarchar (64 characters)	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.	AltName
	BillingId	nvarchar (32 characters)	Accounting information or project code associated with this user.	
	Building	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).	
	CcmId	nvarchar (128 characters)	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager	
	CcmIdType	int (4 bytes)	Type of CCM user/object this id refers to (end user, application user, or directory number)	CcmIdType
	City	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.	
	CosObjectId	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.	ObjectID
	Country	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.	
	CreationTime	datetime (8 bytes)	The date and time the user account was created.	

Key	Name	SQL Data Type/Length	Description	Custom Type
	Department	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.	
	DirectoryId	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).	DirectoryId
	DisplayName	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.	TextName
	DtmfAccessId	nvarchar (40 characters)	The dialable number.	DtmfAccessId
	DtmfNameFirst	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameFirstLast	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name followed by the last name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameLast	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	DtmfNameLastFirst	varchar (16 characters)	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name followed by the first name of the user. These digits are used for searching the user by name via the phone.	DtmfName
	EmailAddress	lvarchar (320 characters)	The primary email address of the user. Not used for incoming mail delivery - informational only.	EmailAddress
	EmployeeId	nvarchar (64 characters)	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.	
	EnhancedSecurityAlias	nvarchar (50 characters)	The unique text name used to identify and authenticate the user with an RSA SecurID security system.	
	FirstName	nvarchar (64 characters)	The first name (i.e., givenName) of this user. Not their surname nor middle name.	Name
	Initials	nvarchar (12 characters)	The initial letters of some or all of the names of this user.	
	IsTemplate	smallint (2 bytes)	A flag indicating whether this instance of a User object is a "template" for creating new users.	Bool
	Language	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.	Language-Code

Key	Name	SQL Data Type/Length	Description	Custom Type
	LastName	nvarchar (64 characters)	The last name (i.e., surname or family name) of this user, by which a user is commonly known.	Name
	LocationObjectId	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.	ObjectID
	MailboxDn	lvarchar (392 characters)	The distinguished name of the mailbox.	
	Manager	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.	
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.	ObjectID
	PabLastImported	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.	
	PostalCode	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.	
	ReadOnly	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.	Bool
	RouteNDRToSender	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.	Bool
	SmtpAddress	lvarchar (320 characters)	SMTP address	SmtpAddress
	State	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.	
	TimeZone	int (4 bytes)	The time zone to which this user account is associated.	
	Title	nvarchar (64 characters)	The position or function of a user within an organization, such as 'Vice President.'	
	Undeleteable	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.	Bool
	UseDefaultLanguage	smallint (2 bytes)	A flag indicating whether the language for this user is derived from the user object attribute or the default language from the location to which the user belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.	Bool
	UseDefaultTimeZone	smallint (2 bytes)	A flag indicating whether the timezone for this user is derived from the user object attribute or the default timezone from the location to which the user belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.	Bool

Key	Name	SQL Data Type/Length	Description	Custom Type
	VoiceName	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.	FileNameGuid

Stored Procedures

Name	Description
csp_UserCreate	Creates a new User account from a user template by inserting a new row into tbl_User.
csp_UserDelete	Deletes a User object from tbl_User as specified by the @ObjectId parameter.
csp_UserModify	Updates the attributes of a User account based on the values passed in via the parameters. The @ObjectId identifies the User object in tbl_User that is updated.

Column Properties

Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	This address may not necessarily be the same as the address where the user receives letters or parcels (i.e. postal address). This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Address
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (128 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or unicode character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	128 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	To ensure that the Alias for a PersonalGroup is unique, it is constructed as follows: <UserAlias> + '_' + <PersonalGroupId>. UserAlias is truncated to 28 characters to avoid overflow.
Business Rules:	Must be unique within a location.
Developer Notes:	
Table/Column Mapping:	tbl_Alias.Alias
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Alias
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except non-printing ASCII characters.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

AltFirstName

Property Name	Value
Description:	The alternate spelling of a user first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	Used to enable name lookup and message addressing via the TUI client when the primary user firstname contains characters not supported by a touch-tone keypad. For example, if the system language is Japanese and user names are stored as Kanji characters, to enable users and callers to search for a user name via the phone, an alternate spelling of the user name in ASCII characters can be stored in the altfirstname column.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.AltFirstName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	AltName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[a-zA-Z0-9]*\$

Property Name	Value
Validation - Description:	ASCII alphabetical or numeric character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

AltLastName

Property Name	Value
Description:	The alternate spelling of a user last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	Used to enable name lookup and message addressing via the TUI client when the primary user lastname contains characters not supported by a touch-tone keypad. For example, if the system language is Japanese and user names are stored as Kanji characters, to enable users and callers to search for a user name via the phone, an alternate spelling of the user name in ASCII characters can be stored in the altlastname column.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.AltLastName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	AltName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[a-zA-Z0-9]*\$
Validation - Description:	ASCII alphabetical or numeric character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	The BillingID can be used in report generation to group call activity for subscribers. For example, to group the call activity for all subscriber in the same department or those subscribers who are part of the same billing group on a phone system.
Business Rules:	If a BillingID exists for a user, it is logged for all phone activity for a user.

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_User.BillingId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (32 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or Unicode character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	32 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Building
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CcmlId

Property Name	Value
Description:	Id of associated EndUser, ApplicationUser, or DirectoryNumber in Call Manager
Notes:	See CcmIdType to determine what type of object this refers to.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CcmId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (128 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any non-printable character
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

CcmIdType

Property Name	Value
Description:	Type of CCM user/object this id refers to (end user, application user, or directory number)
Notes:	Values: 0: End User 1: Application User (such as Unity) 2: Directory Number
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CcmIdType
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	CcmIdType
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	PA Speech Enabled Name Dialing uses 'city' as a disambiguation method when duplicate names are present.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.City
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	The Class of Service (COS) specifies the features for which a user is licensed and limits such as recording limits. See tbl_COS table for more details.
Business Rules:	A user object is not required to have a COS associated with it. For example, a user who does not have any subscriptions to services such as voice mail or PA would not have a COS.
Developer Notes:	
Table/Column Mapping:	tbl_User.CosObjectId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	

Property Name	Value
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Country
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (2 characters)
Validation - Expression:	^[a-zA-Z]*\$
Validation - Description:	ASCII lower or upper case alphabetical character only.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	2 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CreationTime

Property Name	Value
Description:	The date and time the user account was created.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CreationTime
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	

Property Name	Value
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Department
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	Exactly what is stored here changes depending on the directory.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.DirectoryId
Primary Key:	False

Property Name	Value
Allow Null:	True
Default Value:	NULL
Custom Type:	DirectoryId
SQL Data Type/Length:	lvarchar (2048 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	2048 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	The DisplayName is not used to generate the spelled names for voice mail subscriptions, the first and last names are used for that purpose.
Business Rules:	<p>The rule for automatically generating the displayname uses the User "FirstName" and "LastName" columns.</p> <p>If neither the User firstname or lastname columns are populated, the displayname shall be composed using the User "Alias" column.</p>
Developer Notes:	
Table/Column Mapping:	tbl_User.DisplayName
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	TextName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_DtmfAccessId.DtmfAccessId
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	DtmfAccessId
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[a-zA-Z0-9\-_\.\@,;\+\\ \% ?\(\)\~*]*\$
Validation - Description:	Any valid DTMF or SIP address - see "PhoneNumber" custom type for more information.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameFirst

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name of the user. These digits are used for searching the user by name via the phone.
Notes:	
Business Rules:	When the first name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameFirst
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameFirstLast

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the first name followed by the last name of the user. These digits are used for searching the user by name via the phone.
Notes:	The digits corresponding to the user first name are first, followed by the digits corresponding to the user last name until the maximum length of this column (16 digits) is reached. The maximum length of this column is less than either the maximum length of either the user first or last name columns. For example, if a user name is Vibhavaree Gargeya and assuming a standard keypad mapping, this column would contain the digits: 8424282733427439
Business Rules:	When the first or last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameFirstLast
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameLast

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name of the user. These digits are used for searching the user by name via the phone.
Notes:	
Business Rules:	When the last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameLast
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)

Property Name	Value
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DtmfNameLastFirst

Property Name	Value
Description:	The digits corresponding to the numeric keypad mapping on a standard touchtone phone representing the last name followed by the first name of the user. These digits are used for searching the user by name via the phone.
Notes:	The digits corresponding to the user last name are first, followed by the digits corresponding to the user first name until the maximum length of this column (16 digits) is reached. The maximum length of this column is less than either the maximum length of the user last or first name columns. For example, if a user name is Vibhavaree Gargeya and assuming a standard keypad mapping, this column would contain the digits: 4274392842428273
Business Rules:	When the last name of the user is changed in this table, the DTMF spelled name is automatically recalculated.
Developer Notes:	
Table/Column Mapping:	tbl_User.DtmfNameLastFirst
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	DtmfName
SQL Data Type/Length:	varchar (16 characters)
Validation - Expression:	^[0-9]*\$
Validation - Description:	Numeric digits 0-9.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	16 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EmailAddress

Property Name	Value
Description:	The primary email address of the user. Not used for incoming mail delivery - informational only.
Notes:	Not auto-generated.

Property Name	Value
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.EmailAddress
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	EmailAddress
SQL Data Type/Length:	lvarchar (320 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	320 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EmployeeId

Property Name	Value
Description:	The numeric or alphanumeric identifier assigned to a person, typically based on order of hire or association with an organization.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.EmployeeId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

EnhancedSecurityAlias

Property Name	Value
Description:	The unique text name used to identify and authenticate the user with an RSA SecurID security system.
Notes:	The COS that the user belongs to must have Enhanced Security enabled. If the COS that the user belongs to has Enhanced Security enabled, and this column is blank, then the SignIn conversation uses the user alias column instead.
Business Rules:	
Developer Notes:	The Enhanced Security feature (i.e., RSA two-factor security) is not a requirement for Cisco Unity Connection.
Table/Column Mapping:	tbl_User.EnhancedSecurityAlias
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (50 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	50 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this user. Not their surname nor middle name.
Notes:	The firstname can be stored in the native language and character set of the system, such as Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI name lookup purposes.
Business Rules:	This column is optional - not required to create a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.FirstName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	Name
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

Initials

Property Name	Value
Description:	The initial letters of some or all of the names of this user.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Initials
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (12 characters)
Validation - Expression:	^[p{L}\p{Digit}`~!@#\$\$%^&_{} \.,']*
Validation - Description:	Any alphabetical or numeric character (ANSI or Unicode); special ASCII characters ` , ~ , ! , @ , # , \$, % , ^ , & , - , _ , ' , period , comma , and space .
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	6 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

IsTemplate

Property Name	Value
Description:	A flag indicating whether this instance of a User object is a "template" for creating new users.
Notes:	Used to provide default values for selected columns when creating new users. Example: In a corporate campus environment, an administrator can create a user template for each building that is prepopulated with the address information (address, building, city, state, postalcode, timezone, etc.) for the particular building.
Business Rules:	Cannot be modified.
Developer Notes:	
Table/Column Mapping:	tbl_User.IsTemplate
Primary Key:	False
Allow Null:	False
Default Value:	0

Property Name	Value
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.

Property Name	Value
Notes:	<p>NULL is not allowed because the subscriber language cannot be inherited. See customtype "LanguageCode" for more information.</p> <p>There is another language value for a subscriber that outside callers hear when they call this subscriber. This is set on the primary call handler for this subscriber and CAN be set to NULL for Inherited.</p> <p>Values:</p> <p>10241: Arabic_Syria 10241 10249: English_Belize 10249 1025: Arabic_Saudi_Arabia 1025 10250: Spanish_Peru 10250 1026: Bulgarian 1026 1027: Catalan 1027 1028: Chinese_Taiwan 1028 1029: Czech 1029 1030: Danish 1030 1031: German_Standard 1031 1032: Greek 1032 1033: English_United_States 1033 1034: Spanish_Traditional_Sort 1034 1035: Finnish 1035 1036: French_Standard 1036 1037: Hebrew 1037 1038: Hungarian 1038 1039: Icelandic 1039 1040: Italian_Standard 1040 1041: Japanese 1041 1042: Korean 1042 1043: Dutch_Standard 1043 1044: Norwegian_Bokmal 1044 1045: Polish 1045 1046: Portuguese_Brazilian 1046 1047: Rhaeto-Romanic 1047 1048: Romanian 1048 1049: Russian 1049 1050: Croatian 1050 1051: Slovak 1051 1052: Albanian 1052 1053: Swedish 1053 1054: Thai 1054 1055: Turkish 1055 1056: Urdu 1056 1057: Indonesian 1057 1058: Ukrainian 1058 1059: Belarusian 1059 1060: Slovenian 1060 1061: Estonian 1061 1062: Latvian 1062 1063: Lithuanian 1063 1065: Farsi 1065 1066: Vietnamese 1066 1067: Armenian 1067 1068: Azeri_Latin 1068 1069: Basque 1069</p>

Business Rules:	The default value for this column is derived from the user template.
Developer Notes:	Allowing NULL now.
Table/Column Mapping:	tbl_User.Language
Primary Key:	False
Allow Null:	True
Default Value:	NULL

Property Name	Value
Custom Type:	LanguageCode
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this user, by which a user is commonly known.
Notes:	The lastname can be stored in the native language and character set of the system, such as Kanji characters for Japanese. This allows users to use their native language and character set for display and GUI name lookup purposes.
Business Rules:	This column is optional - not required to create a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.LastName
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	Name
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except for non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this user belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_User.LocationObjectId
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	Identifies a mailbox in foreign email system for use in synchronizing information stored there, such as calendar information for personal rules.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.MailboxDn
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (392 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	392 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Manager
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_User.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PabLastImported
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	A specific format for zip or postal codes is not required since these items differ so widely and can change at any time. This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PostalCode
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters

Property Name	Value
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	Normally used only for system objects.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.ReadOnly
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	<p>Values:</p> <p>0: Cisco Unity Connection will not route an NDR to the sender's mailbox. Rather Cisco Unity Connection will delete the NDR.</p> <p>1: Cisco Unity Connection will route an NDR to the sender's mailbox when the message is undeliverable. The NDR message will be presented in the new message stack. Cisco Unity Connection will activate the MWI similar to new voice messages. Cisco Unity Connection will also notify based on subscriber notification device settings when new NDR's are present in the subscriber mailbox similar to new voice messages.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.RouteNDRToSender

Property Name	Value
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

SmtetAddress

Property Name	Value
Description:	SMTP address
Notes:	<p>For performance, we store the SMTP address which for users, contacts, and DLs is a combination of Alias (or MailName if Alias is non-ASCII such as in the case where Alias is in Japanese) and the Location.SmtetAddress associated to which this Alias object belongs.</p> <p>The SmtetAddress for a PersonalGroup is formed differently: <UserAlias> + '_' + 'List' + '_' + <NumericId> + '@' + <Domain>. For example, if JSmith creates a PersonalGroup with NumericId of 1, the SmtetAddress would be: JSmith_List_1@cisco.com</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_Alias.SmtetAddress
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	SmtetAddress
SQL Data Type/Length:	lvarchar (320 characters)
Validation - Expression:	^([w\!#\$%&'*/+=?^{\} \~]+([\.]?[w\!#\$%&'*/+=?^{\} \~]+)*)+@((([a-zA-Z]([a-zA-Z\d]*[a-zA-Z\d])?.)+([a-zA-Z\d])+)\$

Property Name	Value
Validation - Description:	SMTP Address= Local-Part '@' Domain Name where Local-Part (Max size : 64) * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character '.' is allowed but it cannot be the first or last character in the local-part. Also there cannot be consecutive periods. For example: a..b@c is invalid. <domain> ::= <subdomain> " " <subdomain> ::= <label> <subdomain> "." <label> <label> ::= <letter> [[<ldh-str>] <let-dig>] <ldh-str> ::= <let-dig-hyp> <let-dig-hyp> <ldh-str> <let-dig-hyp> ::= <let-dig> "-" label must start with a letter, end with a letter or digit, and have as interior characters only letters, digits, and hyphen.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	320 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.State
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	<p>The TimeZone value refers to an entry in the table tbl_TimeZone.</p> <p>By default this value is NULL, which means the user is in the same time zone as the VMS on which their account resides. If, however, a user is checking messages from another time zone, this value can be set to associate them with any time zone.</p> <p>Since messages are all stored with time stamps in Universal Time Coordinated (UTC), Unity translates the times into the appropriate time zone on the fly when users are checking messages in the same way an email client does when showing you your inbox.</p>
Business Rules:	
Developer Notes:	In versions prior to Cisco Unity Connection, the bias was stored in the lower 16-bits of the integer and the upper 16-bits was reserved for an identifier.
Table/Column Mapping:	tbl_User.TimeZone
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Title

Property Name	Value
Description:	The position or function of a user within an organization, such as 'Vice President.'
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Title
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.

Property Name	Value
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	Values: 0: Can be deleted 1: Cannot be deleted
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Undeletable
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultLanguage

Property Name	Value
Description:	A flag indicating whether the language for this user is derived from the user object attribute or the default language from the location to which the user belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.
Notes:	Values: 0: The language is the default language defined for the user. 1: The language is derived from the location to which this user belongs.

Property Name	Value
Business Rules:	If the value of the Language attribute in the User table is NULL, then use the language from the location to which this user belongs. Otherwise the language as specified by the value of the tbl_User.Language is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultTimeZone

Property Name	Value
Description:	A flag indicating whether the timezone for this user is derived from the user object attribute or the default timezone from the location to which the user belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.
Notes:	Values: 0: The time zone is the default timezone defined for the user. 1: The time zone is derived from the location to which this user belongs.
Business Rules:	If the value of the Timezone attribute in the User table is NULL, then use the timezone from the location to which this user belongs. Otherwise the timezone as specified by the value of the tbl_User.Timezone is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool

5.192. vw_UserPrimarySmtpAddress

Provides a list of only the primary SMTP address for all users that have at least one mailbox associated with their user account.

Additional Information

This view is comprised of the columns in the tbl_MailboxMap, tbl_MailboxStoreMap and tbl_User tables.

The 'primary' SMTP address is used for delivery of incoming messages as well as the 'reply to' column in outbound messages. Unity auto-generates the primary SMTP address for a user.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
PK	MailboxId	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.	
	MailDatabase	lvarchar (512 characters)	The name of the mailbox database, such as "UnityMbxDb1."	
	MailDbInstance	lvarchar (256 characters)	The name of the dbinstance on which the mailbox store resides.	
	MailServer	lvarchar (256 characters)	The name of the server on which the mailbox store resides.	
	SmtpAddress	lvarchar (320 characters)	The primary SMTP address for the user.	SmtpAddress
PK	UserObjectId	char (36 characters)	The ID of the user account to which this SMTP address belongs.	ObjectID

Stored Procedures

vw_UserPrimarySmtpAddress has no stored procedures.

Column Properties

MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	For users with mailboxes on UMSS, the objectid of the UMSS mailbox object is contained here. For users with mailboxes on an other mail store such as Exchange or Domino, the user's legacy Exchange DN or primary SMTP address is stored here.

Property Name	Value
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_MailboxMap.MailboxId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (110 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	110 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailDatabase

Property Name	Value
Description:	The name of the mailbox database, such as "UnityMbxDb1."
Notes:	A VMS can contain multiple mailbox databases. For UMSS, all the mailbox databases are a single instance of SqlServer, but each mailbox database must have a unique name. For UMSS, mailbox database is a conceptual grouping of a Mail Information Store and a Mail Attachment Store pair. Voice message header information is stored within the Mail Information Store, while Voice Message Attachment information is stored the Mail Attachment store. See UMSS section of the data dictionary for more information.
Business Rules:	
Developer Notes:	For external IMAP mailstores this value will be NULL.
Table/Column Mapping:	tbl_MailboxStoreMap.MailDatabase
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	lvarchar (512 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters

Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

5.193. vw_UserTemplate

Provides the default values for user properties when creating new users. User properties include the account data and contact information of persons who have an account on the system. A person must have a user account on the system in order to logon and gain access system services such as a subscription to a voice mailbox.

Additional Information

This view is comprised of columns in the tbl_User and tbl_UserTemplate tables, plus an additional column - VoiceName - that is defined in tbl_StreamFile.FileName.

A Unity user is not required to have a voice mail subscription or mailbox assigned to the user's account. Also it is possible for a user to be a subscriber but not have a mailbox. This is to allow supporting "Internet Subscribers" which are essentially the same as subscribers but with a remote email address.

Views are made for User and Contact that expose only the properties those should have, so that we can later split them up if desired without impacting clients. This of course means having separate sprocs too.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	Address	nvarchar (128 characters)	The physical address such as a house number and street name where the user is located, or with which a user is associated.	
	Alias	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.	Alias
	BillingId	nvarchar (32 characters)	Accounting information or project code associated with this user.	
	Building	nvarchar (64 characters)	The name of the building where the user is based (e.g., SJ-21).	
	CantChange	smallint (2 bytes)	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).	Bool
	City	nvarchar (64 characters)	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.	
	CosObjectId	char (36 characters)	The unique identifier of the COS (Class of Service) object to which this user account is associated.	ObjectID
	Country	nvarchar (2 characters)	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.	
	CreationTime	datetime (8 bytes)	The date and time the user account was created.	
	Department	nvarchar (64 characters)	The name or number for the department or subdivision of an organization to which a person belongs.	

Key	Name	SQL Data Type/Length	Description	Custom Type
	DisplayName	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.	TextName
	DisplayNameRule	smallint (2 bytes)	The format for generating the user display name.	Display-NameRule
	DoesntExpire	smallint (2 bytes)	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).	Bool
	Language	int (4 bytes)	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.	Language-Code
	LocationObjectId	char (36 characters)	The unique identifier of the LocationVMS object to which this user belongs.	ObjectID
	MailboxDn	lvarchar (392 characters)	The distinguished name of the mailbox.	
	MailboxStoreObjectId	char (36 characters)	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.	ObjectID
	Manager	nvarchar (64 characters)	The name of the person who is the manager or supervisor of the user.	
	MessageAgingPolicyObjectId	char (36 characters)	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.	ObjectID
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.	ObjectID
	PabLastImported	datetime (8 bytes)	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.	
	PostalCode	nvarchar (40 characters)	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.	
	ReadOnly	smallint (2 bytes)	If set to 1 (true) user is read-only and cannot be modified.	Bool
	RouteNDRTosender	smallint (2 bytes)	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.	Bool
	State	nvarchar (64 characters)	The full name of the state or province where this user is located, or with which a user is associated.	

Key	Name	SQL Data Type/Length	Description	Custom Type
	TimeZone	int (4 bytes)	The time zone to which this user account is associated.	
	Undeetable	smallint (2 bytes)	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.	Bool
	UseDefaultLanguage	smallint (2 bytes)	A flag indicating whether the language for this user template is derived from the user template object attribute or the default language from the location to which the user template belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.	Bool
	UseDefaultTimeZone	smallint (2 bytes)	A flag indicating whether the timezone for this user template is derived from the user template object attribute or the default timezone from the location to which the user template belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.	Bool

Stored Procedures

Name	Description
csp_UserTemplateCreate	Creates a new User template by inserting a new row into tbl_User and tbl_UserTemplate.
csp_UserTemplateDelete	Deletes a User template from tbl_User and tbl_UserTemplate as specified by the @ObjectId parameter.
csp_UserTemplateModify	Updates the attributes of a User template based on the values passed in via the parameters. The @ObjectId identifies the User object in tbl_User and tbl_UserTemplate that is updated.

Column Properties

Address

Property Name	Value
Description:	The physical address such as a house number and street name where the user is located, or with which a user is associated.
Notes:	This address may not necessarily be the same as the address where the user receives letters or parcels (i.e. postal address).
	This column is for informational purposes.

Property Name	Value
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Address
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (128 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or unicode character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	128 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	To ensure that the Alias for a PersonalGroup is unique, it is constructed as follows: <UserAlias> + '_' + <PersonalGroupObjectId>. UserAlias is truncated to 28 characters to avoid overflow.
Business Rules:	Must be unique within a location.
Developer Notes:	
Table/Column Mapping:	tbl_Alias.Alias
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Alias
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character (ASCII and Unicode) except non-printing ASCII characters.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

BillingId

Property Name	Value
Description:	Accounting information or project code associated with this user.
Notes:	The BillingID can be used in report generation to group call activity for subscribers. For example, to group the call activity for all subscriber in the same department or those subscribers who are part of the same billing group on a phone system.
Business Rules:	If a BillingID exists for a user, it is logged for all phone activity for a user.
Developer Notes:	
Table/Column Mapping:	tbl_User.BillingId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (32 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any ASCII or Unicode character.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	32 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Building

Property Name	Value
Description:	The name of the building where the user is based (e.g., SJ-21).
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Building
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CantChange

Property Name	Value
Description:	A flag indicating whether the user can set/change their credential (i.e., the credential specified by the associated credential policy).
Notes:	<p>Most organizations normally want to allow users to change their credentials. However, there are cases where this may not be desired. For example, in a scenario when more than one user has access to the same account; an administrator can set the credential, inform the users of the value of the credential, and not allow the users to change it.</p> <p>Values: 0: User is allowed to change their credential 1: User cannot change their credential</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.CantChange
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

City

Property Name	Value
Description:	The name of a locality, such as a city, county or other geographic region where the user is located, or with which a user is associated.
Notes:	PA Speech Enabled Name Dialing uses 'city' as a disambiguation method when duplicate names are present.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.City
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CosObjectId

Property Name	Value
Description:	The unique identifier of the COS (Class of Service) object to which this user account is associated.
Notes:	The Class of Service (COS) specifies the features for which a user is licensed and limits such as recording limits. See tbl_COS table for more details.
Business Rules:	A user object is not required to have a COS associated with it. For example, a user who does not have any subscriptions to services such as voice mail or PA would not have a COS.
Developer Notes:	
Table/Column Mapping:	tbl_User.CosObjectId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Country

Property Name	Value
Description:	The two-letter ISO 3166-1 country code where the user is located, or with which a user is associated.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_User.Country
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (2 characters)
Validation - Expression:	^[a-zA-Z]*\$
Validation - Description:	ASCII lower or upper case alphabetical character only.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	2 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

CreationTime

Property Name	Value
Description:	The date and time the user account was created.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.CreationTime
Primary Key:	False
Allow Null:	False

Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Department

Property Name	Value
Description:	The name or number for the department or subdivision of an organization to which a person belongs.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Department
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	The DisplayName is not used to generate the spelled names for voice mail subscriptions, the first and last names are used for that purpose.
Business Rules:	<p>The rule for automatically generating the displayname uses the User "FirstName" and "LastName" columns.</p> <p>If neither the User firstname or lastname columns are populated, the displayname shall be composed using the User "Alias" column.</p>
Developer Notes:	
Table/Column Mapping:	tbl_User.DisplayName
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	TextName
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

DisplayNameRule

Property Name	Value
Description:	The format for generating the user display name.
Notes:	<p>If an organization uses a format other than those listed, one of these options must be used anyway, then manually adjust the display name in each user account.</p> <p>For Japanese, a value of 2 must be used.</p> <p>Values: 1: First name, then last name. 2: Last name, then first name.</p>
Business Rules:	<p>The rule for automatically generating the display name uses the user "FirstName" and "LastName" columns.</p> <p>If neither the user firstname or lastname columns are populated, the display name shall be composed using the user "Alias" column.</p>
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.DisplayNameRule
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	DisplayNameRule
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

DoesntExpire

Property Name	Value
Description:	A flag indicating whether or not the user credential will automatically expire (and the user required to change the credential upon its expiration) based on a defined schedule. Regardless, the user still may change the credential (if allowed by CantChange).

Property Name	Value
Notes:	<p>The scope of this setting is per credential. It enables an administrator to disable credential expiration on a per credential/user basis while maintaining a credential expiration policy for all users on the system. See tbl_Credential->DoesntExpire for more information.</p> <p>Values: 0: The user credential will automatically expire. The expiration of the credential is controlled by the value of the column tbl_CredentialPolicy->MaxDays. 1: The user credential will not automatically expire.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.DoesntExpire
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Language

Property Name	Value
Description:	The preferred language of this user. For a user with a voice mailbox, it is the language in which the subscriber hears instructions played to them. If the subscriber has TTS enabled by their COS, it is the language used for TTS.

Property Name	Value
Notes:	<p>NULL is not allowed because the subscriber language cannot be inherited. See customtype "LanguageCode" for more information.</p> <p>There is another language value for a subscriber that outside callers hear when they call this subscriber. This is set on the primary call handler for this subscriber and CAN be set to NULL for Inherited.</p> <p>Values:</p> <p>10241: Arabic_Syria 10241 10249: English_Belize 10249 1025: Arabic_Saudi_Arabia 1025 10250: Spanish_Peru 10250 1026: Bulgarian 1026 1027: Catalan 1027 1028: Chinese_Taiwan 1028 1029: Czech 1029 1030: Danish 1030 1031: German_Standard 1031 1032: Greek 1032 1033: English_United_States 1033 1034: Spanish_Traditional_Sort 1034 1035: Finnish 1035 1036: French_Standard 1036 1037: Hebrew 1037 1038: Hungarian 1038 1039: Icelandic 1039 1040: Italian_Standard 1040 1041: Japanese 1041 1042: Korean 1042 1043: Dutch_Standard 1043 1044: Norwegian_Bokmal 1044 1045: Polish 1045 1046: Portuguese_Brazilian 1046 1047: Rhaeto-Romanic 1047 1048: Romanian 1048 1049: Russian 1049 1050: Croatian 1050 1051: Slovak 1051 1052: Albanian 1052 1053: Swedish 1053 1054: Thai 1054 1055: Turkish 1055 1056: Urdu 1056 1057: Indonesian 1057 1058: Ukrainian 1058 1059: Belarusian 1059 1060: Slovenian 1060 1061: Estonian 1061 1062: Latvian 1062 1063: Lithuanian 1063 1065: Farsi 1065 1066: Vietnamese 1066 1067: Armenian 1067 1068: Azeri_Latin 1068 1069: Basque 1069</p>

MailboxDn

Property Name	Value
Description:	The distinguished name of the mailbox.
Notes:	Identifies a mailbox in foreign email system for use in synchronizing information stored there, such as calendar information for personal rules.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.MailboxDn

Property Name	Value
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	lvarchar (392 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	392 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object where a mailbox is created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.MailboxStoreObjectId
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

Manager

Property Name	Value
Description:	The name of the person who is the manager or supervisor of the user.
Notes:	This column is for informational purposes.

Property Name	Value
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Manager
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

MessageAgingPolicyObjectId

Property Name	Value
Description:	The unique identifier of the MessageAgingPolicy object that applies to the mailbox created for a new subscriber created with this template.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_UserTemplate.MessageAgingPolicyObjectId
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_User.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PabLastImported

Property Name	Value
Description:	The date and time when the personal address book was last imported from a groupware package into the personal groups for a user.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PabLastImported
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	datetime (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

PostalCode

Property Name	Value
Description:	For users in the United States, the zip code where the user is located. For users in Canada, Mexico, and other countries, the postal code where the user is located.
Notes:	A specific format for zip or postal codes is not required since these items differ so widely and can change at any time. This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.PostalCode
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (40 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	40 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ReadOnly

Property Name	Value
Description:	If set to 1 (true) user is read-only and cannot be modified.
Notes:	Normally used only for system objects.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.ReadOnly
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	

Property Name	Value
Validation - Minimum Value:	
Validation - Maximum Value:	

RouteNDRToSender

Property Name	Value
Description:	A flag indicating, for an undeliverable message, whether NDR messages will appear in the subscriber's mailbox or are deleted by the system.
Notes:	<p>Values:</p> <p>0: Cisco Unity Connection will not route an NDR to the sender's mailbox. Rather Cisco Unity Connection will delete the NDR.</p> <p>1: Cisco Unity Connection will route an NDR to the sender's mailbox when the message is undeliverable. The NDR message will be presented in the new message stack. Cisco Unity Connection will activate the MWI similar to new voice messages. Cisco Unity Connection will also notify based on subscriber notification device settings when new NDR's are present in the subscriber mailbox similar to new voice messages.</p>
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.RouteNDRToSender
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

State

Property Name	Value
Description:	The full name of the state or province where this user is located, or with which a user is associated.
Notes:	This column is for informational purposes.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.State

Property Name	Value
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TimeZone

Property Name	Value
Description:	The time zone to which this user account is associated.
Notes:	<p>The TimeZone value refers to an entry in the table tbl_TimeZone.</p> <p>By default this value is NULL, which means the user is in the same time zone as the VMS on which their account resides. If, however, a user is checking messages from another time zone, this value can be set to associate them with any time zone.</p> <p>Since messages are all stored with time stamps in Universal Time Coordinated (UTC), Unity translates the times into the appropriate time zone on the fly when users are checking messages in the same way an email client does when showing you your inbox.</p>
Business Rules:	
Developer Notes:	In versions prior to Cisco Unity Connection, the bias was stored in the lower 16-bits of the integer and the upper 16-bits was reserved for an identifier.
Table/Column Mapping:	tbl_User.TimeZone
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Undeletable

Property Name	Value
Description:	A flag indicating whether this subscriber can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	Values: 0: Can be deleted 1: Cannot be deleted
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_User.Undeletable
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultLanguage

Property Name	Value
Description:	A flag indicating whether the language for this user template is derived from the user template object attribute or the default language from the location to which the user template belongs. Always use the Language column - if this is set, then the column Language is being derived directly from the location.
Notes:	Values: 0: The language is the default language defined for the user template. 1: The language is derived from the location to which this user template belongs.
Business Rules:	If the value of the Language attribute in the User table is NULL, then use the language from the location to which this user belongs. Otherwise the language as specified by the value of the tbl_User.Language is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

UseDefaultTimeZone

Property Name	Value
Description:	A flag indicating whether the timezone for this user template is derived from the user template object attribute or the default timezone from the location to which the user template belongs. Always use the Timezone column - if this is set, then the column Timezone is being derived directly from the location.
Notes:	Values: 0: The time zone is the default timezone defined for the user template. 1: The time zone is derived from the location to which this user template belongs.
Business Rules:	If the value of the Timezone attribute in the User table is NULL, then use the timezone from the location to which this user belongs. Otherwise the timezone as specified by the value of the tbl_User.Timezone is used.
Developer Notes:	
Table/Column Mapping:	A mapping to a Table/Column does NOT exist for this View column.
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

5.194. vw_VMSServer

Contains the information for each server in the Virtual Messaging System (VMS) that the SRM needs to manage the servers in the VMS. A VMS is a collection of components running on one or more servers acting as one virtual voice messaging system.

Additional Information

This view is comprised of all the columns in the tbl_VMSServer table, plus an additional column TemplateName, which is the TemplateName of the template defined in tbl_VMSTemplate.ObjectId.

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	IpAddress	varchar (40 characters)	The IP address of the server.	IPAddress
	MaximumTelephonyPorts	smallint (2 bytes)	Maximum allowed telephony ports in system.	
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.	ObjectID
	ServerName	nvarchar (64 characters)	The name of the server.	
	TemplateName	nvarchar (64 characters)	The non-localized display name of the VMS template.	
PK	VmsServerObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.	ObjectID
	VmsTemplateObjectId	char (36 characters)	The unique identifier of the VMSTemplate object that defines the roles that run on this server.	ObjectID

Stored Procedures

Name	Description
csp_VMSServerCreate	Creates a new VMSServer object by inserting a new row into tbl_VMSServer. A VMSServer object consists of the information for each server in the Virtual Messaging System (VMS) that the SRM needs to manage the servers in the VMS.
csp_VMSServerDelete	Deletes a VMSServer object from tbl_VMSServer as specified by the @ObjectId parameter.
csp_VMSServerModify	Updates the attributes of a VMSServer object based on the values passed in via the parameters. The @ObjectId parameter identifies the VMSServer object that is updated.

Column Properties

IpAddress

Property Name	Value
Description:	The IP address of the server.
Notes:	IPv6 addresses not permitted yet.
Business Rules:	
Developer Notes:	In Kubrick, the validation rule attempted to support both IPv4 and IPv6, but it had some flaws. For example it did not support having an IPv4 address embedded in an IPv6 address. For reference, here's the old regular expression. (^[0-9]{1,3})\.([0-9]{1,3})\.([0-9]{1,3})\.([0-9]{1,3}) ([A-Fa-f0-9]{1,4}:){7}[A-Fa-f0-9]{1,4} [A-Fa-f0-9]{1,4}::([A-Fa-f0-9]{1,4}:){0,5}[A-Fa-f0-9]{1,4}
Table/Column Mapping:	tbl_VMSServer.IpAddress
Primary Key:	False
Allow Null:	True
Default Value:	NULL
Custom Type:	IPAddress
SQL Data Type/Length:	varchar (40 characters)
Validation - Expression:	^0*([1-9]?[d]1\d\d[2[0-4]\d25[0-5])\.0*([1-9]?[d]1\d\d[2[0-4]\d25[0-5])\.0*([1-9]?[d]1\d\d[2[0-4]\d25[0-5])\.0*([1-9]?[d]1\d\d[2[0-4]\d25[0-5])\$
Validation - Description:	IPv4 Address= X.X.X.X where X=0..255. Allows the use of leading zeros. For example, 019.021.055.001
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

MaximumTelephonyPorts

Property Name	Value
Description:	Maximum allowed telephony ports in system.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_VMSServer.MaximumTelephonyPorts
Primary Key:	False
Allow Null:	False
Default Value:	144
Custom Type:	
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	1024

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_VMSServer.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

ServerName

Property Name	Value
Description:	The name of the server.
Notes:	
Business Rules:	The server name must be unique within the VMS.
Developer Notes:	Data validation is based on DNS syntax rules as specified in RFC 1035 for a DNS domain name label.
Table/Column Mapping:	tbl_VMSServer.Name
Primary Key:	False

Property Name	Value
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[a-zA-Z0-9\~]*\$
Validation - Description:	ASCII characters only. All alphanumeric characters and hyphen.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

TemplateName

Property Name	Value
Description:	The non-localized display name of the VMS template.
Notes:	
Business Rules:	Template names must be unique within the VMS.
Developer Notes:	
Table/Column Mapping:	tbl_VMSTemplate.Name
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

VmsServerObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSServer object.
Notes:	
Business Rules:	Default value = newid().

Property Name	Value
Developer Notes:	
Table/Column Mapping:	tbl_VMSServer.ObjectID
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

VmsTemplateObjectID

Property Name	Value
Description:	The unique identifier of the VMSTemplate object that defines the roles that run on this server.
Notes:	See tbl_VMSTemplate for details.
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_VMSServer.VmsTemplateObjectID
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

5.195. vw_VMSTemplate

Contains templates for configuring the VMS. A template is a predefined set of roles in a tested VMS configuration. Templates assign roles on servers based upon supported, approved configurations. This view contains both predefined templates that are shipped "out of the box" and customized templates created by the customer.

Additional Information

This view is comprised of all the columns in tbl_VMSTemplates table, plus an additional column "PropertyKey" that contains the localization constant for the TemplateName value.

You need to include "WHERE LanguageCode=1033" or such to get the PropertyKey (LocalizedName) in the desired language from tbl_LocalizedText.

Business Rules

For K1 VMS templates cannot be created by users. This view is read-only after initial configuration. Later in K2, users will be allowed to create custom templates.

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a VMSTemplate object.	ObjectID
	SystemTemplate	smallint (2 bytes)	A flag indicating whether the template is a read-only, factory created, system template.	Bool
	TemplateName	nvarchar (64 characters)	The non-localized display name of the VMS template.	
PK	VmsTemplateObjectId	char (36 characters)	duplicate of ObjectId - temporary for backwards compatibility	ObjectID

Stored Procedures

Name	Description

Column Properties

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSTemplate object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_VMSTemplate.ObjectId

Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_LocalizedText.LanguageCode
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	LanguageCode
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	

Property Name	Value
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a VMSTemplate object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_VMSTemplate.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

PropertyKey

Property Name	Value
Description:	Contains the localization constant for the VMSTemplate name.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_LocalizedText.LocalizedName
Primary Key:	False
Allow Null:	False
Default Value:	

Property Name	Value
Custom Type:	
SQL Data Type/Length:	nvarchar (1024 characters)
Validation - Expression:	^[^\x00-\x1F\x7F\x0A\x0D]*\$
Validation - Description:	Any character (Unicode and ASCII).
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	1024 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

SystemTemplate

Property Name	Value
Description:	A flag indicating whether the template is a read-only, factory created, system template.
Notes:	Values: 0: Template is a user-defined template and can be modified 1: Template is a system template and cannot be modified by a user
Business Rules:	Users are not allowed to modify system templates.
Developer Notes:	
Table/Column Mapping:	tbl_VMSTemplate.SystemTemplate
Primary Key:	False
Allow Null:	False
Default Value:	1
Custom Type:	Bool
SQL Data Type/Length:	smallint (2 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

TemplateName

Property Name	Value
Description:	The non-localized display name of the VMS template.
Notes:	
Business Rules:	Template names must be unique within the VMS.
Developer Notes:	

Property Name	Value
Table/Column Mapping:	tbl_VMSTemplate.Name
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (64 characters)
Validation - Expression:	^[^\x00-\x1F\x7F]*\$
Validation - Description:	Any character except non-printing ASCII characters.
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	64 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

VmsTemplateObjectId

Property Name	Value
Description:	duplicate of ObjectId - temporary for backwards compatibility
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_VMSTemplate.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

5.197. vw_WaveFormat

A simple view for tbl_WaveFormat.

Contains definitions of the format of waveform-audio data (i.e., wave file formats).

Additional Information

Business Rules

Column Summary

Key	Name	SQL Data Type/Length	Description	Custom Type
	AvgBytesPerSec	bigint (8 bytes)	Specifies the required average data-transfer rate (in bytes per second) for the FormatTag.	
	BitsPerSample	int (4 bytes)	Bits per sample for the FormatTag.	
	BlockAlign	int (4 bytes)	Block alignment, in bytes.	
	Channels	int (4 bytes)	Number of channels in the waveform-audio data.	
	CodecId	int (4 bytes)	Internal Codec ID number	
	FormatName	varchar (128 characters)	Name reported by the OS corresponding to FormatTag.	
	FormatTag	int (4 bytes)	Waveform-audio format type.	
	JavaEncoding	nvarchar (24 characters)	Corresponding value of javax.sound.sampled.AudioFormat.Encoding as string.	
PK	ObjectId	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a WaveFormat object.	ObjectID
	SamplesPerSec	bigint (8 bytes)	Specifies the required data-transfer rate (in bytes per second) for the FormatTag.	

Stored Procedures

Name	Description
------	-------------

Column Properties

AvgBytesPerSec

Property Name	Value
Description:	Specifies the required average data-transfer rate (in bytes per second) for the FormatTag.
Notes:	
Business Rules:	Greater than zero
Developer Notes:	See Microsoft documentation of WAVEFORMATEX for more information. Max value is 4294967295 (DWORD max 0xffffffff). This value is too large to enter as a maximum value constraint.
Table/Column Mapping:	tbl_WaveFormat.AvgBytesPerSec
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	bigint (8 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

BitsPerSample

Property Name	Value
Description:	Bits per sample for the FormatTag.
Notes:	
Business Rules:	Greater than zero
Developer Notes:	See Microsoft documentation of WAVEFORMATEX for more information.
Table/Column Mapping:	tbl_WaveFormat.BitsPerSample
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	65535

BlockAlign

Property Name	Value
Description:	Block alignment, in bytes.
Notes:	The block alignment is the minimum atomic unit of data for the FormatTag format type
Business Rules:	Greater than zero
Developer Notes:	See Microsoft documentation of WAVEFORMATEX for more information.
Table/Column Mapping:	tbl_WaveFormat.BlockAlign
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	65535

Channels

Property Name	Value
Description:	Number of channels in the waveform-audio data.
Notes:	Monaural data uses one channel and stereo data uses two channels.
Business Rules:	Greater than zero
Developer Notes:	See Microsoft documentation of WAVEFORMATEX for more information.
Table/Column Mapping:	tbl_WaveFormat.Channels
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	65535

CodecId

Property Name	Value
Description:	Internal Codec ID number
Notes:	
Business Rules:	
Developer Notes:	C++ symbols are GY_AUDIO_CODEC_*, see un_Miu project.
Table/Column Mapping:	tbl_WaveFormat.CodecId
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	65535

FormatName

Property Name	Value
Description:	Name reported by the OS corresponding to FormatTag.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_WaveFormat.FormatName
Primary Key:	False
Allow Null:	False
Default Value:	
Custom Type:	
SQL Data Type/Length:	varchar (128 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	1 characters
Validation - Maximum Length:	128 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

FormatTag

Property Name	Value
Description:	Waveform-audio format type.
Notes:	
Business Rules:	Greater than zero
Developer Notes:	Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. See Microsoft documentation of WAVEFORMATEX for more information.
Table/Column Mapping:	tbl_WaveFormat.FormatTag
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	int (4 bytes)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	0
Validation - Maximum Value:	65535

JavaEncoding

Property Name	Value
Description:	Corresponding value of javax.sound.sampled.AudioFormat.Encoding as string.
Notes:	
Business Rules:	
Developer Notes:	
Table/Column Mapping:	tbl_WaveFormat.JavaEncoding
Primary Key:	False
Allow Null:	True
Default Value:	
Custom Type:	
SQL Data Type/Length:	nvarchar (24 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	0 characters
Validation - Maximum Length:	24 characters
Validation - Minimum Value:	

Property Name	Value
Validation - Maximum Value:	

ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a WaveFormat object.
Notes:	
Business Rules:	Default value = newid().
Developer Notes:	
Table/Column Mapping:	tbl_WaveFormat.ObjectId
Primary Key:	True
Allow Null:	False
Default Value:	
Custom Type:	ObjectID
SQL Data Type/Length:	char (36 characters)
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	36 characters
Validation - Maximum Length:	36 characters
Validation - Minimum Value:	
Validation - Maximum Value:	

SamplesPerSec

Property Name	Value
Description:	Specifies the required data-transfer rate (in bytes per second) for the FormatTag.
Notes:	
Business Rules:	Greater than zero
Developer Notes:	See Microsoft documentation of WAVEFORMATEX for more information. Max value is 4294967295 (DWORD max 0xffffffff). This value is too large to enter as a maximum value constraint.
Table/Column Mapping:	tbl_WaveFormat.SamplesPerSec
Primary Key:	False
Allow Null:	False
Default Value:	0
Custom Type:	
SQL Data Type/Length:	bigint (8 bytes)

Property Name	Value
Validation - Expression:	
Validation - Description:	
Validation - Minimum Length:	
Validation - Maximum Length:	
Validation - Minimum Value:	
Validation - Maximum Value:	

Chapter 6. Stored Procedures

6.1. csp_AgencyCreate

Creates a new Community Voice Mail agency by inserting a new row into tbl_Agency.

Additional Information

The parameters @AdministratorTemplateObjectId, @ClientCOSObjectId, @ClientTemplateObjectId, and @DisplayName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ClientCOSObjectId	In	inherit	char (36 characters)	The Class of Service to which clients belonging to this agency are assigned.
Required	@ClientTemplateObjectId	In	inherit	char (36 characters)	The user template used when creating/resetting client mailboxes belonging to this agency.
Required	@DisplayName	In	inherit	nvarchar (64 characters)	Preferred name of the agency to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@AdministratorTemplateObjectId	In	inherit	char (36 characters)	The user template used to create new administrators for this agency.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Agency object.

Exceptions

csp_AgencyCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@AdministratorTemplateObjectId, @ClientCOSOObjectId, @ClientTemplateObjectId, and @DisplayName) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AdministratorTemplateObjectId

Property Name	Value
Description:	The user template used to create new administrators for this agency.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.AdministratorTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.AdministratorTemplateObjectId." If "tbl_Agency.AdministratorTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClientCOSObjectId

Property Name	Value
Description:	The Class of Service to which clients belonging to this agency are assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ClientCOSObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ClientCOSObjectId." If "tbl_Agency.ClientCOSObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ClientTemplateObjectId

Property Name	Value
Description:	The user template used when creating/resetting client mailboxes belonging to this agency.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ClientTemplateObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ClientTemplateObjectId." If "tbl_Agency.ClientTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	Preferred name of the agency to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.DisplayName." If "tbl_Agency.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Agency object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ObjectId." If "tbl_Agency.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.2. csp_AgencyDelete

Deletes an Agency object from tbl_Agency as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Agency object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_AgencyDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The Agency object specified by @ObjectId was not found. The names of the object (Agency), table (tbl_Agency), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Agency), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Agency object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ObjectId." If "tbl_Agency.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.3. csp_AgencyExtensionRangeCreate

Creates a new range of extensions for a Community Voice Mail agency by inserting a new row into tbl_AgencyExtensionRange.

Additional Information

The parameters @AgencyObjectId, @MinExtensionNumber and @MaxExtensionNumber must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@AgencyObjectId	In	inherit	char (36 characters)	The agency to which this range of extensions is assigned.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MaxExtensionNumber	In	inherit	nvarchar (10 characters)	The number of the last extension in this range of extensions assigned to an agency.
Optional	@MinExtensionNumber	In	inherit	nvarchar (10 characters)	The number of the first extension in this range of extensions assigned to an agency.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.

Exceptions

csp_AgencyExtensionRangeCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@AgencyObjectId, @MinExtensionNumber and @MaxExtensionNumber) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AgencyObjectId

Property Name	Value
Description:	The agency to which this range of extensions is assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.AgencyObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.AgencyObjectId." If "tbl_AgencyExtensionRange.AgencyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MaxExtensionNumber

Property Name	Value
Description:	The number of the last extension in this range of extensions assigned to an agency.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.MaxExtensionNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.MaxExtensionNumber." If "tbl_AgencyExtensionRange.MaxExtensionNumber" can be NULL, then explicit NULL is allowed.
Default Value:	411
Direction:	In
Update Column Value From Parameter:	True

@MinExtensionNumber

Property Name	Value
Description:	The number of the first extension in this range of extensions assigned to an agency.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.MinExtensionNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.MinExtensionNumber." If "tbl_AgencyExtensionRange.MinExtensionNumber" can be NULL, then explicit NULL is allowed.
Default Value:	411
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.ObjectId." If "tbl_AgencyExtensionRange.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.4. csp_AgencyExtensionRangeDelete

Deletes an AgencyExtensionRange object from tbl_AgencyExtensionRange as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_AgencyExtensionRangeDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The AgencyExtensionRange object specified by @ObjectId was not found. The names of the object (Agency extension range), table (tbl_AgencyExtensionRange), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_AgencyExtensionRange), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.ObjectId." If "tbl_AgencyExtensionRange.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.5. csp_AgencyExtensionRangeModify

Updates the attributes of an AgencyExtensionRange object based on the values passed in via the parameters. The @ObjectId parameter identifies the AgencyExtensionRange object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.
Optional	@AgencyObjectId	In	inherit	char (36 characters)	The agency to which this range of extensions is assigned.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MaxExtensionNumber	In	inherit	nvarchar (10 characters)	The number of the last extension in this range of extensions assigned to an agency.
Optional	@MinExtensionNumber	In	inherit	nvarchar (10 characters)	The number of the first extension in this range of extensions assigned to an agency.

Exceptions

csp_AgencyExtensionRangeModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The AgencyExtensionRange object specified by @ObjectId was not found. The names of the object (Agency extension range), table (tbl_AgencyExtensionRange), and column (ObjectId) are included with the exception message.

Parameter Properties

@AgencyObjectId

Property Name	Value
Description:	The agency to which this range of extensions is assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.AgencyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.AgencyObjectId." If "tbl_AgencyExtensionRange.AgencyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxExtensionNumber

Property Name	Value
Description:	The number of the last extension in this range of extensions assigned to an agency.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.MaxExtensionNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.MaxExtensionNumber." If "tbl_AgencyExtensionRange.MaxExtensionNumber" can be NULL, then explicit NULL is allowed.
Default Value:	411
Direction:	In
Update Column Value From Parameter:	True

@MinExtensionNumber

Property Name	Value
Description:	The number of the first extension in this range of extensions assigned to an agency.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.MinExtensionNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.MinExtensionNumber." If "tbl_AgencyExtensionRange.MinExtensionNumber" can be NULL, then explicit NULL is allowed.
Default Value:	411
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AgencyExtensionRange object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AgencyExtensionRange.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AgencyExtensionRange.ObjectId." If "tbl_AgencyExtensionRange.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.6. csp_AgencyModify

Updates the attributes of an Agency object based on the values passed in via the parameters. The @ObjectId parameter identifies the Agency object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Agency object.
Optional	@AdministratorTemplateObjectId	In	inherit	char (36 characters)	The user template used to create new administrators for this agency.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ClientCOSObjectId	In	inherit	char (36 characters)	The Class of Service to which clients belonging to this agency are assigned.
Optional	@ClientTemplateObjectId	In	inherit	char (36 characters)	The user template used when creating/resetting client mailboxes belonging to this agency.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	Preferred name of the agency to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Exceptions

csp_AgencyModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The Agency object specified by @ObjectId was not found. The names of the object (Agency), table (tbl_Agency), and column (ObjectId) are included with the exception message.

Parameter Properties

@AdministratorTemplateObjectId

Property Name	Value
Description:	The user template used to create new administrators for this agency.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.AdministratorTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.AdministratorTemplateObjectId." If "tbl_Agency.AdministratorTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ClientCOSObjectId

Property Name	Value
Description:	The Class of Service to which clients belonging to this agency are assigned.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ClientCOSObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ClientCOSObjectId." If "tbl_Agency.ClientCOSObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ClientTemplateObjectId

Property Name	Value
Description:	The user template used when creating/resetting client mailboxes belonging to this agency.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.ClientTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ClientTemplateObjectId." If "tbl_Agency.ClientTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	Preferred name of the agency to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Agency.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.DisplayName." If "tbl_Agency.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Agency object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Agency.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Agency.ObjectId." If "tbl_Agency.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.7. csp_AliasCreate

Creates a new Alias object for a user, Contact, distribution list, or personal group by inserting a new row into tbl_Alias.

Additional Information

The parameter @Alias must be provided.

If the @LocationObjectId is not passed in or is NULL, the Location will be set to the default location - LocationVMS.

If @SmtpAddress is not passed in or is NULL, the SmtpAddress is formed as such: @Alias + "@" + @Domain. The value of @Domain is derived directly from the value of the SmtpDomain property for the specified Location.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this is a primary alias. Typically used for a user.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this alias belongs.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtpAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtpAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Object_ContactObjectId	In	inherit	char (36 characters)	The object to which this alias pertains. If the alias is for a Contact, the unique identifier of the Contact object to which this alias refers. Otherwise, this attribute is set to NULL.
Optional	@Object_DistributionListObjectId	In	inherit	char (36 characters)	The object to which this alias pertains. If the alias is for a distribution list, the unique identifier of the DistributionList object to which this alias refers. Otherwise, this attribute is set to NULL.
Optional	@Object_PersonalGroupId	In	inherit	char (36 characters)	The object to which this alias pertains. If the alias is for a personal group, the unique identifier of the PersonalGroup object to which this alias refers. Otherwise, this attribute is set to NULL.
Optional	@Object_UserObjectId	In	inherit	char (36 characters)	The object to which this alias pertains. If the alias is for a user, the unique identifier of the User object to which this alias refers. Otherwise, this attribute is set to NULL.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Alias object.
Optional	@SmtpAddress	In	inherit	nvarchar (320 characters)	The full SMTP address for this object.

Exceptions

csp_AliasCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The default Location object was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. 2. The specified Location object was not found. The names of the object (Location), table (tbl_LocationI), and columns (ObjectId) are included with the exception message.

Parameter Properties

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this is a primary alias. Typically used for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.IsPrimary." If "tbl_Alias.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectld

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this alias belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Alias.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.LocationObjectId." If "tbl_Alias.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtetAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtetAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character '.' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Object_ContactObjectId

Property Name	Value
Description:	The object to which this alias pertains. If the alias is for a Contact, the unique identifier of the Contact object to which this alias refers. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Object_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Object_ContactObjectId." If "tbl_Alias.Object_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Object_DistributionListObjectId

Property Name	Value
Description:	The object to which this alias pertains. If the alias is for a distribution list, the unique identifier of the DistributionList object to which this alias refers. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Object_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Object_DistributionListObjectId." If "tbl_Alias.Object_DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Object_PersonalGroupObjectId

Property Name	Value
Description:	The object to which this alias pertains. If the alias is for a personal group, the unique identifier of the PersonalGroup object to which this alias refers. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Object_PersonalGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Object_PersonalGroupObjectId." If "tbl_Alias.Object_PersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Object_UserObjectId

Property Name	Value
Description:	The object to which this alias pertains. If the alias is for a user, the unique identifier of the User object to which this alias refers. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Object_UserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Object_UserObjectId." If "tbl_Alias.Object_UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Alias object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.ObjectId." If "tbl_Alias.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@SmtpAddress

Property Name	Value
Description:	The full SMTP address for this object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.SmtpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	SmtpAddress
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.SmtpAddress." If "tbl_Alias.SmtpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.8. csp_AliasDelete

Deletes an Alias object from tbl_Alias as specified by the @Alias and @LocationObjectId parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Alias object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_AliasDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Alias and @LocationObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The Alias object for the specified Location was not found. The names of the object (Alias), table (tbl_Alias), and columns (Alias and LocationObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Alias), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Alias object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.ObjectId." If "tbl_Alias.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.9. csp_AliasModify

Updates the attributes of a Alias object for a user, Contact, distribution list, or personal group based on the values passed in via the parameters. The @Alias and @LocationObjectId parameters identify the Alias object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an Alias object.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this is a primary alias. Typically used for a user.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct local-part of an Alias's SmtetAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtetAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Optional	@SmtetAddress	In	inherit	lvarchar (320 characters)	The full SMTP address for this object.

Exceptions

csp_AliasModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Alias and @LocationObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The Alias object for the specified Location was not found. The names of the object (Alias), table (tbl_Alias), and columns (Alias and LocationObjectId) are included with the exception message.

Parameter Properties

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this is a primary alias. Typically used for a user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.IsPrimary." If "tbl_Alias.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct local-part of an Alias's SmtAddress (the part of the address before the @ sign) instead of using the typical method of constructing the local-part of the SmtAddress from the Alias parameter. This is generally used when the Alias contains non-ASCII characters, for example an Alias in Japanese, which cannot be converted into a valid SMTP address.
Notes:	<p>The syntax specification defined by the Messaging Team, references RFC 2282 (Internet Message Format).</p> <p>Syntax specification: Email Address= Local-Part '@' Domain Name where</p> <p>Local-Part (Max size : 64)</p> <ul style="list-style-type: none"> * Uppercase and lowercase letters * The digits 0 through 9 * The characters ! # \$ % & ' * + - / = ? ^ _ ` { } ~ * The character ' ' is allowed but it cannot be the first or last character in the local-part.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	MailName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an Alias object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.ObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.ObjectId." If "tbl_Alias.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtpAddress

Property Name	Value
Description:	The full SMTP address for this object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.SmtpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (320 characters)
Custom Type:	SmtpAddress
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.SmtpAddress." If "tbl_Alias.SmtpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.10. csp_AllocateVoiceFile

Allocates a voice file that can be used for voice names and greetings by creating a new StreamFile object in tbl_StreamFile.

Additional Information

Many stored procedures, such as csp_UserCreate and csp_SubscriberCreate, take a voice filename as input so that a voice name can be recorded in advance before adding the user or subscriber.

In order to keep track of files and to make sure filenames are unique, this filename must be generated using csp_AllocateVoiceFile.

If for some reason the file is allocated but never passed into a stored procedure to be associated with an object (like a user), there is nothing more that needs to be done - the file will be automatically removed after a certain period of time.

The cleanup can be forced to happen sooner by calling csp_StreamFileDelete (after first getting the stream id based on the filename using vw_StreamFile), but this is not necessary.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FileName	Out	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@ReserveTime	In	ignore	int (4 bytes)	The amount of time for which the filename should be reserved. If the filename is not used in that time span, it will be removed.

Exceptions

csp_AllocateVoiceFile does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FileName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@ReserveTime

Property Name	Value
Description:	The amount of time for which the filename should be reserved. If the filename is not used in that time span, it will be removed.
Notes:	Time in minutes.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.11. csp_AlternateNameCreate

Creates a new AlternateName for either a Contact or User by inserting a new row into tbl_AlternateName.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ContactObjectId	In	inherit	char (36 characters)	The unique identifier of the Contact to which this alternate name belongs.
Optional	@DistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the Distribution List to which this alternate name belongs.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this person. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this person, by which a person is commonly known.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location to which this alternate name belongs.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.
Optional	@PersonalContactObjectId	In	inherit	char (36 characters)	The unique identifier of the Personal Contact to which this alternate name belongs.
Optional	@PersonalGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the Personal Group to which this alternate name belongs.
Optional	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User to which this alternate name belongs.

Exceptions

csp_AlternateNameCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid user object as specified by @UserObjectId was not found. Rather the object specified by @UserObjectId is a user template. The names of the object (user), parameter (@UserObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ContactObjectId

Property Name	Value
Description:	The unique identifier of the Contact to which this alternate name belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.ContactObjectId." If "tbl_AlternateName.ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DistributionListObjectId

Property Name	Value
Description:	The unique identifier of the Distribution List to which this alternate name belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.DistributionListObjectId." If "tbl_AlternateName.DistributionListObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this person. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.FirstName." If "tbl_AlternateName.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this person, by which a person is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.LastName." If "tbl_AlternateName.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location to which this alternate name belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.LocationObjectId." If "tbl_AlternateName.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.ObjectId." If "tbl_AlternateName.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PersonalContactObjectId

Property Name	Value
Description:	The unique identifier of the Personal Contact to which this alternate name belongs.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.PersonalContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.PersonalContactObjectId." If "tbl_AlternateName.PersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PersonalGroupObjectId

Property Name	Value
Description:	The unique identifier of the Personal Group to which this alternate name belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.PersonalGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.PersonalGroupObjectId." If "tbl_AlternateName.PersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User to which this alternate name belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.UserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.UserObjectId." If "tbl_AlternateName.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.12. csp_AlternateNameDelete

Deletes an AlternateName object from tbl_AlternateName as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_AlternateNameDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The AlternateName object specified by @ObjectId was not found. The names of the object (Alternate name), table (tbl_AlternateName), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_AlternateName), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.ObjectId." If "tbl_AlternateName.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.13. csp_AlternateNameModify

Updates the FirstName and LastName attributes of an AlternateName object based on the values passed in via the parameters. The @ObjectId parameter identifies the AlternateName object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of this person. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of this person, by which a person is commonly known.

Exceptions

csp_AlternateNameModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The AlternateName object specified by @ObjectId was not found. The names of the object (Alternate name), table (tbl_AlternateName), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of this person. Not their surname nor middle name.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.FirstName." If "tbl_AlternateName.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of this person, by which a person is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_AlternateName.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.LastName." If "tbl_AlternateName.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for an AlternateName object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_AlternateName.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_AlternateName.ObjectId." If "tbl_AlternateName.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.14. csp_BroadcastMessageCreate

Creates a new BroadcastMessage object by inserting a new row into tbl_BroadcastMessage. Broadcast messages are a special type of message that is created for all Cisco Unity Connection subscribers on a VMS.

Additional Information

The parameters @StreamFile and @SubscriberObjectId must be provided.

This procedure also updates the FileName of the StreamFile by executing csp_StreamFileModify.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@StreamFile	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object that sent this broadcast message.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date and time when the message expires.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date and time when the message becomes active.

Exceptions

csp_BroadcastMessageCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@StreamFile and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @SubscriberObjectId was not found. Rather the object specified by @SubscriberObjectId is a user template. The names of the object (user), parameter (@SubscriberObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date and time when the message expires.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.EndDate." If "tbl_BroadcastMessage.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.ObjectId." If "tbl_BroadcastMessage.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out

Property Name	Value
Update Column Value From Parameter:	True

@StartDate

Property Name	Value
Description:	The date and time when the message becomes active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.StartDate." If "tbl_BroadcastMessage.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StreamFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object that sent this broadcast message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.SubscriberObjectId." If "tbl_BroadcastMessage.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.15. csp_BroadcastMessageDelete

Deletes a BroadcastMessage object from tbl_BroadcastMessage as specified by the @ObjectId parameter. The StreamFile is also deleted by executing csp_StreamFileDelete.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_BroadcastMessageDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are three conditions that can cause an Object Not Found exception to be thrown: 1. The specified BroadcastMessage object was not found. The names of the object (Broadcast message), table (tbl_BroadcastMessage), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_BroadcastMessage), and the column (ObjectId) are included with the exception message. The active transaction is rolled back. 3. From csp_StreamFileDelete: The specified StreamFile object was not found. The names of the object (Stream file), table (tbl_StreamFile), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.ObjectId." If "tbl_BroadcastMessage.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.16. csp_BroadcastMessageModify

Updates the attributes of a BroadcastMessage object based on the values passed in via the parameters. The @ObjectId parameter identifies the BroadcastMessage object that is updated. The associated StreamFile is also updated.

Additional Information

The LastModificationDate is set to the current date and time.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LastModificationSubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the subscriber that last modified the message.
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@EndDate	In	inherit	datetime (8 bytes)	The date and time when the message expires.
Optional	@ModifierSubscriberObjectId	In	inherit	char (36 characters)	Deprecated - please use LastModificationSubscriberObjectId instead
Optional	@StartDate	In	inherit	datetime (8 bytes)	The date and time when the message becomes active.
Optional	@StreamFile	In	explicit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

csp_BroadcastMessageModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@StreamFile and @ModifierSubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are two conditions that can cause a EXCEPTION_OBJECT_NOTFOUND exception to be thrown:</p> <ol style="list-style-type: none"> 1. The specified BroadcastMessage object was not found. The names of the object (Broadcast message), table (tbl_BroadcastMessage), and column (ObjectId) are included with the exception message. 2. From csp_StreamFileModify: The specified StreamFile object was not found. The names of the object (Stream file), table (tbl_StreamFile), and column (FileName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDate

Property Name	Value
Description:	The date and time when the message expires.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.EndDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.EndDate." If "tbl_BroadcastMessage.EndDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastModificationSubscriberObjectId

Property Name	Value
Description:	The unique identifier of the subscriber that last modified the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.LastModificationSubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.LastModificationSubscriberObjectId." If "tbl_BroadcastMessage.LastModificationSubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ModifierSubscriberObjectId

Property Name	Value
Description:	Deprecated - please use LastModificationSubscriberObjectId instead
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.LastModificationSubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.LastModificationSubscriberObjectId." If "tbl_BroadcastMessage.LastModificationSubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.ObjectId." If "tbl_BroadcastMessage.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@StartDate

Property Name	Value
Description:	The date and time when the message becomes active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.StartDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.StartDate." If "tbl_BroadcastMessage.StartDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StreamFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

6.17. csp_BroadcastMessagePurge

Purges expired broadcast messages.

Additional Information

Intended mainly for calling from background cleanup process. Normally run via SysAgent task.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_BroadcastMessagePurge does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.18. csp_BroadcastMessageRecipientCreate

Creates a new BroadcastMessageRecipient object by inserting a new row into tbl_BroadcastMessageRecipient. For each recipient of a broadcast message, tracks which subscribers have listened to which broadcast messages.

Additional Information

The parameters @BroadcastMessageObjectId and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@BroadcastMessageObjectId	In	inherit	char (36 characters)	The unique identifier of the broadcast message.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the recipient subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Status	In	inherit	smallint (2 bytes)	A flag indicating whether the recipient has listened to the message.

Exceptions

csp_BroadcastMessageRecipientCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@BroadcastMessageObjectId and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BroadcastMessageObjectId

Property Name	Value
Description:	The unique identifier of the broadcast message.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_BroadcastMessageRecipient.BroadcastMessageObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId." If "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Status

Property Name	Value
Description:	A flag indicating whether the recipient has listened to the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.Status
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.Status." If "tbl_BroadcastMessageRecipient.Status" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the recipient subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.SubscriberObjectId
Required/Optional Parameter:	Required

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.SubscriberObjectId." If "tbl_BroadcastMessageRecipient.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.19. csp_BroadcastMessageRecipientDelete

Deletes a BroadcastMessageRecipient object from tbl_BroadcastMessageRecipient as specified by the combination of the @BroadcastMessageObjectId and @SubscriberObjectId parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@BroadcastMessageObjectId	In	inherit	char (36 characters)	The unique identifier of the broadcast message.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the recipient subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_BroadcastMessageRecipientDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@BroadcastMessageObjectId and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified BroadcastMessageRecipient object was not found. The names of the object (Broadcast message recipient), table (tbl_BroadcastMessageRecipient), and columns (BroadcastMessageObjectId and SubscriberObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_BroadcastMessageRecipient), and the columns (BroadcastMessageObjectId and SubscriberObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BroadcastMessageObjectld

Property Name	Value
Description:	The unique identifier of the broadcast message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.BroadcastMessageObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId." If "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the recipient subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.SubscriberObjectId." If "tbl_BroadcastMessageRecipient.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.20. csp_BroadcastMessageRecipientModify

Updates the attributes of a BroadcastMessageRecipient object based on the values passed in via the parameters. The combination of the @BroadcastMessageObjectId and @SubscriberObjectId parameters identify the BroadcastMessageRecipient object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@BroadcastMessageObjectId	In	inherit	char (36 characters)	The unique identifier of the broadcast message.
Required	@Status	In	inherit	smallint (2 bytes)	A flag indicating whether the recipient has listened to the message.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the recipient subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_BroadcastMessageRecipientModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@BroadcastMessageObjectId, @SubscriberObjectId, and @Status) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified BroadcastMessageRecipient object was not found. The names of the object (Broadcast message recipient), table (tbl_BroadcastMessageRecipient), and columns (BroadcastMessageObjectId and SubscriberObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BroadcastMessageObjectid

Property Name	Value
Description:	The unique identifier of the broadcast message.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.BroadcastMessageObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId." If "tbl_BroadcastMessageRecipient.BroadcastMessageObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Status

Property Name	Value
Description:	A flag indicating whether the recipient has listened to the message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessageRecipient.Status
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.Status." If "tbl_BroadcastMessageRecipient.Status" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the recipient subscriber.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_BroadcastMessageRecipient.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessageRecipient.SubscriberObjectId." If "tbl_BroadcastMessageRecipient.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.21. csp_BroadcastMessageSetRead

Marks a broadcast message as read (or unread) for a subscriber.

Additional Information

The parameters @BroadcastMessageObjectId and @SubscriberObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@BroadcastMessageObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Read	In	ignore	smallint (2 bytes)	A flag indicating whether the message has been read (1) or not read (0). Defaults to read (1).

Exceptions

csp_BroadcastMessageSetRead will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@BroadcastMessageObjectId and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BroadcastMessageObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a BroadcastMessage object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_BroadcastMessage.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_BroadcastMessage.ObjectId." If "tbl_BroadcastMessage.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Read

Property Name	Value
Description:	A flag indicating whether the message has been read (1) or not read (0). Defaults to read (1).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@SubscriberObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.22. csp_CallerGroupCreate

Creates a new caller group by executing csp_PersonalGroupCreate, which inserts a new row into tbl_PersonalGroup.

Additional Information

The parameters @DisplayName and @SubscriberObjectId must be provided.

If the @VoiceName is provided, a stream file is also created.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	Display name for this caller group.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The subscriber to which this caller group belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@VoiceName	In	inherit	varchar (40 characters)	Voice file to use for this personal group (if voice name has already been recorded).

Exceptions

csp_CallerGroupCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	Display name for this caller group.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The subscriber to which this caller group belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.UserObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.UserObjectId." If "tbl_PersonalGroup.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this personal group (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.23. csp_CallerGroupDelete

Deletes a caller group by executing `csp_PersonalGroupDelete`, which deletes the `PersonalGroup` object from `tbl_PersonalGroup` as specified by the `@ObjectId` parameter.

Additional Information

Member mappings in `tbl_PersonalGroupMember` will automatically be deleted (SQL cascade delete). Also any member mappings where this group is the member of another group will automatically be deleted.

The Alias associated with this `PersonalGroup` will be deleted from `tbl_Alias`. Also if a stream file exists for this `PersonalGroup`, it will be deleted from `tbl_StreamFile`.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a <code>PersonalGroup</code> object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

`csp_CallerGroupDelete` will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter <code>@ObjectId</code> is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	From <code>csp_PersonalGroupDelete</code> : There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified <code>PersonalGroup</code> object was not found. The names of the object (<code>PersonalGroup</code>), table (<code>tbl_PersonalGroup</code>), and column (<code>ObjectId</code>) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (<code>tbl_PersonalGroup</code>), and the column (<code>ObjectId</code>) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.24. csp_CallerGroupMemberCreate

Adds a new member (user, personal contact, or another personal group) to a caller group by executing `csp_PersonalGroupMemberCreate`, which inserts a new row into `tbl_PersonalGroupMember`.

Additional Information

The parameter `@CallerGroupObjectId` must be provided. In addition, one of the following parameters must also be provided:

- `@MemberCallGroupObjectId`
- `@MemberSubscriberObjectId`
- `@MemberContactObjectId`
- `@MemberPersonalContactObjectId`

One of the `@Member*` parameters must contain a valid member, while the remaining `@Member*` parameters contains a value of NULL.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	<code>@CallerGroupObjectId</code>	In	inherit	char (36 characters)	The unique identifier of the PersonalGroup object to which this member belongs.
Optional	<code>@AuditAlias</code>	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	<code>@AuditComponent</code>	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	<code>@MemberCallerGroupObjectId</code>	In	inherit	char (36 characters)	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in <code>tbl_PersonalGroup</code> . Otherwise, this attribute is set to NULL.
Optional	<code>@MemberContactObjectId</code>	In	inherit	char (36 characters)	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in <code>tbl_Contact</code> . Otherwise, this attribute is set to NULL.
Optional	<code>@MemberPersonalContactObjectId</code>	In	inherit	char (36 characters)	The member of this personal group. If the member is a personal contact, the unique identifier of the corresponding PersonalContact object in <code>tbl_PersonalContact</code> . Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MemberSubscriberObjectId	In	inherit	char (36 characters)	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set ot NULL.
Optional	@ObjectId	Out	inherit	char (36 characters)	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.

Exceptions

csp_CallerGroupMemberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @CallerGroupObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallerGroupObjectId

Property Name	Value
Description:	The unique identifier of the PersonalGroup object to which this member belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.PersonalGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.PersonalGroupObjectId." If "tbl_PersonalGroupMember.PersonalGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MemberCallerGroupObjectId

Property Name	Value
Description:	The member of this personal group. If the member is another personal group, the unique identifier of the corresponding PersonalGroup object in tbl_PersonalGroup. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberPersonalGroupId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberPersonalGroupId." If "tbl_PersonalGroupMember.MemberPersonalGroupId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberContactObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a system contact, the unique identifier of the corresponding Contact object in tbl_Contact. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberContactObjectId." If "tbl_PersonalGroupMember.MemberContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberPersonalContactObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a personal contact, the unique identifier of the corresponding PersonalContact object in tbl_PersonalContact. Otherwise, this attribute is set ot NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberPersonalContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberPersonalContactObjectId." If "tbl_PersonalGroupMember.MemberPersonalContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberSubscriberObjectId

Property Name	Value
Description:	The member of this personal group. If the member is a user, the unique identifier of the corresponding User object in tbl_User. Otherwise, this attribute is set ot NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.MemberUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.MemberUserObjectId." If "tbl_PersonalGroupMember.MemberUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Surrogate key. A globally unique, system-generated identifier for a PersonalGroupMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroupMember.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroupMember.ObjectId." If "tbl_PersonalGroupMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.25. csp_CallerGroupMemberDelete

Removes a member from a caller group by executing csp_PersonalGroupMemberDelete, which deletes a PersonalGroupMember object from tbl_PersonalGroupMember as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CallerGroupMemberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	From csp_PersonalGroupMemberDelete: There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified PersonalGroupMember object was not found. The names of the object (Personal group member), table (tbl_PersonalGroupMember), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_PersonalGroupMember), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.26. csp_CallerGroupModify

Updates the properties of a caller group by executing `csp_PersonalGroupModify`, which updates the attributes of a `PersonalGroup` object based on the values passed in via the parameters. The `@ObjectId` parameter identifies the `PersonalGroup` object that is updated.

Additional Information

If the `@VoiceName` is provided, a check is made to determine if a stream file already exists for this `PersonalGroup`. If a stream file does exist, it is deleted, and then a new stream file is created. Otherwise a new stream file is created.

Note that this procedure does not update the `Alias` in `tbl_Alias`.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a <code>PersonalGroup</code> object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@VoiceName	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

`csp_CallerGroupModify` will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter <code>@ObjectId</code> is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified PersonalGroup object was not found. The names of the object (PersonalGroup), table (tbl_PersonalGroup), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The preferred text name of the group to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.DisplayName." If "tbl_PersonalGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a PersonalGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_PersonalGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_PersonalGroup.ObjectId." If "tbl_PersonalGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.27. csp_CallhandlerGetActiveGreeting

Determines the correct greeting to play based on some information about a call (internal? busy?) and schedules.

Additional Information

The parameter @ObjectId (Callhandler ID) must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Optional	@GreetingType	Out	inherit	nvarchar (12 characters)	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Optional	@IsBusy	In	explicit-withdefault	smallint (2 bytes)	Was the extension busy?
Optional	@IsInternal	In	explicit-withdefault	smallint (2 bytes)	Is this call from an internal caller?

Exceptions

csp_CallhandlerGetActiveGreeting will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameters @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@GreetingType

Property Name	Value
Description:	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.GreetingType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.GreetingType." If "tbl_Greeting.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	Out
Update Column Value From Parameter:	True

@IsBusy

Property Name	Value
Description:	Was the extension busy?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@IsInternal

Property Name	Value
Description:	Is this call from an internal caller?
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ObjectId." If "tbl_CallHandler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.28. csp_CallhandlerGetActiveTransferOption

Retrieve the active transfer option for a specified call handler.

Additional Information

The parameter @ObjectId (Callhandler ID) must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The unique identifier of the call handler for which the active transfer option is to be retrieved.
Optional	@TransferOptionType	Out	inherit	nvarchar (64 characters)	The active transfer option type.

Exceptions

csp_CallhandlerGetActiveTransferOption will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameters @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@ObjectId

Property Name	Value
Description:	The unique identifier of the call handler for which the active transfer option is to be retrieved.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ObjectId." If "tbl_CallHandler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferOptionType

Property Name	Value
Description:	The active transfer option type.
Notes:	Using the object id of the call handler and this type, the transfer option can be uniquely identified.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.TransferOptionType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TransferRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.TransferOptionType." If "tbl_TransferOption.TransferOptionType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.29. csp_CallhandlerModify

Updates the attributes of a CallHandler object based on the values passed in via the parameters. The @ObjectId parameter identifies the CallHandler object that is updated. This procedure is used for both primary and non-primary call handlers.

Additional Information

If a DtmfAccessID is passed in, csp_CallhandlerModify will update the DtmfAccessId object (executes csp_DtmfAccessIdSet). If a VoiceName is passed in, csp_CallhandlerModify will create a StreamFile object (executes csp_StreamFileModify).

If the current call handler has an recipient of one type (subscriber or distribution list) and you want to change to the opposite type, you must explicitly set the old one to NULL and specify the new one. For example, if a call handler has a subscriber recipient you must pass in NULL for the subscriber objectid as well as the object id of a distribution list in order to make the call handler have a distribution list recipient.

The client may select to inherit either the language or timezone from the location to which this call handler belongs rather than use the language or timezone specified for the callhandler. See @UseDefaultLanguage and @UseDefaultTimezone for more information.

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterMessage_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.
Optional	@EditMsg	In	inherit	smallint (2 bytes)	A flag that determines whether the caller can edit messages.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMsgLen	In	inherit	int (4 bytes)	The maximum recording length (in seconds) for messages left by unidentified callers.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	Default switch to use for transfers.
Optional	@OneKeyDelay	In	inherit	int (4 bytes)	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Optional	@Recipient_ContactObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_SubscriberObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SendSecureMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "secure."
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "urgent."
Optional	@TimeZone	In	inherit	int (4 bytes)	TimeZone this call handler is operating in.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler inherit language from location or set @Language to the desired language.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler inherit timezone from location or set @Timezone to the desired time zone.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this call handler.

Exceptions

csp_CallhandlerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameters @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A CallHandler object matching the value of @ObjectId and IsTemplate = true was not found. The names of the object (call handler), parameter (@ObjectId), table (tbl_CallHandler), and column (ObjectId) are included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	If the parameter @DtmfAccessId contains a value other than NULL, a DtmfAccessId object is created for this callhandler.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EditMsg

Property Name	Value
Description:	A flag that determines whether the caller can edit messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.EditMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.EditMsg." If "tbl_CallHandler.EditMsg" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLen

Property Name	Value
Description:	The maximum recording length (in seconds) for messages left by unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MaxMsgLen
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MaxMsgLen." If "tbl_CallHandler.MaxMsgLen" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	Default switch to use for transfers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MediaSwitchObjectId." If "tbl_CallHandler.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ObjectId." If "tbl_CallHandler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@OneKeyDelay

Property Name	Value
Description:	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Notes:	Setting this value to zero will disable one key input and result in all MenuEntry's for the call handler being locked.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.OneKeyDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.OneKeyDelay." If "tbl_CallHandler.OneKeyDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1500
Direction:	In
Update Column Value From Parameter:	True

@Recipient_ContactObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_ContactObjectId." If "tbl_CallHandler.Recipient_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Recipient_DistributionListObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_DistributionListObjectId." If "tbl_CallHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_SubscriberObjectId." If "tbl_CallHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ScheduleSetObjectId." If "tbl_CallHandler.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SendSecureMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendSecureMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendSecureMsg." If "tbl_CallHandler.SendSecureMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "urgent."
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MarkUrgent
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendUrgentMsg." If "tbl_CallHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	TimeZone this call handler is operating in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.TimeZone." If "tbl_CallHandler.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the call handler inherit language from location or set @Language to the desired language.
Notes:	See vw_Callhandler.UseDefaultLanguage for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the call handler inherit timezone from location or set @Timezone to the desired time zone.
Notes:	See vw_Callhandler.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this call handler.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.30. csp_CallhandlerPrimaryTemplateModify

Updates the attributes of a CallHandler template object based on the values passed in via the parameters. The @ObjectId parameter identifies the CallHandler object that is updated. This procedure is used for both primary and non-primary call handlers.

Note that a call handler template cannot be changed into a standard call handler object via the csp_CallhandlerTemplateModify stored procedure.

Additional Information

If a VoiceName is passed in, csp_CallhandlerTemplateModify will update the StreamFile object (executes csp_StreamFileModify).

If the current call handler template has an recipient of one type (subscriber or distribution list) and you want to change to the opposite type, you must explicitly set the old one to NULL and specify the new one. For example, if a call handler template has a subscriber recipient you must pass in NULL for the subscriber objectid as well as the object id of a distribution list in order to make the call handler template have a distribution list recipient.

The client may select to inherit either the language or timezone from the location to which this call handler belongs rather than use the language or timezone specified for the callhandler. See @UseDefaultLanguage and @UseDefaultTimezone for more information.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterMessage_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Optional	@EditMsg	In	inherit	smallint (2 bytes)	A flag that determines whether the caller can edit messages.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMsgLen	In	inherit	int (4 bytes)	The maximum recording length (in seconds) for messages left by unidentified callers.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	Default switch to use for transfers.
Optional	@OneKeyDelay	In	inherit	int (4 bytes)	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Optional	@Recipient_ContactObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_SubscriberObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Optional	@SendSecureMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "secure."
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "urgent."
Optional	@TimeZone	In	inherit	int (4 bytes)	TimeZone this call handler is operating in.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit timezone from location.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this call handler template.

Exceptions

csp_CallhandlerPrimaryTemplateModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A CallHandler object matching the value of @ObjectId and IsTemplate = true was not found. The names of the object (template), table (tbl_CallHandler), and column (ObjectId) are included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EditMsg

Property Name	Value
Description:	A flag that determines whether the caller can edit messages.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_CallHandler.EditMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.EditMsg." If "tbl_CallHandler.EditMsg" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLen

Property Name	Value
Description:	The maximum recording length (in seconds) for messages left by unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MaxMsgLen
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MaxMsgLen." If "tbl_CallHandler.MaxMsgLen" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	Default switch to use for transfers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MediaSwitchObjectId." If "tbl_CallHandler.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ObjectId." If "tbl_CallHandler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@OneKeyDelay

Property Name	Value
Description:	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.OneKeyDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.OneKeyDelay." If "tbl_CallHandler.OneKeyDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1500

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@Recipient_ContactObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_ContactObjectId." If "tbl_CallHandler.Recipient_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Recipient_DistributionListObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_DistributionListObjectId." If "tbl_CallHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_SubscriberObjectId." If "tbl_CallHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ScheduleSetObjectId." If "tbl_CallHandler.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SendSecureMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendSecureMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendSecureMsg." If "tbl_CallHandler.SendSecureMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "urgent."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MarkUrgent
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendUrgentMsg." If "tbl_CallHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	TimeZone this call handler is operating in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.TimeZone." If "tbl_CallHandler.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit language from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultLanguage for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit timezone from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this call handler template.
Notes:	A new voice name can be requested using <code>csp_AllocateVoiceFile</code> . After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.31. csp_CallhandlerTemplateCreate

Creates a new call handler template by inserting a new row into tbl_CallHandler. A call handler template is identical to a call handler except for one distinction --- IsTemplate column = true (1) signifies that a call handler object is a template. This procedure is used to create both primary and non-primary call handlers. csp_CallhandlerTemplateCreate sets the callhandler template attributes by using the values passed in and the default values from the specified callhandler template (optional). Note that a call handler template is optional to create a call handler template.

In addition to creating a new handler and callhandler object, this stored procedure also creates the sub collections of call action, greeting, transferoption and menuentry objects associated with this callhandler template. If a VoiceName is passed in, a new voice name for the call handler template is created (executes csp_StreamFileModify) by activating an existing StreamFile object in tbl_StreamFile that was allocated using csp_AllocateVoiceFile.

To change the attributes for a call handler template, see csp_CallhandlerTemplateModify.

Additional Information

The parameters @DisplayName and @MediaSwitchObjectId must be provided.

This procedure calls csp_CallHandlerCreate, which actually creates the new CallHandler object in tbl_CallHandler.

Values for the recipient override is what is in the template, even if the template does not use the same object type. For example, the template specifies a distribution list recipient. If the sproc is called and uses this template, but specifies a subscriber recipient, the created call handler will have a subscriber recipient. It will not end up with two recipients defined.

The client may select to inherit either the language or timezone from the location to which this call handler belongs rather than use the language or timezone specified for the callhandler. See @UseDefaultLanguage and @UseDefaultTimezone for more information.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Required	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch to use when transferring calls.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AfterMessage_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@EditMsg	In	inherit	smallint (2 bytes)	A flag that determines whether the caller can edit messages.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this is a "primary" call handler for a subscriber, or an "application" call handler.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMsgLen	In	inherit	int (4 bytes)	The maximum recording length (in seconds) for messages left by unidentified callers.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@OneKeyDelay	In	inherit	int (4 bytes)	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Optional	@Recipient_ContactObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Recipient_Subscriber ObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Optional	@SendSecureMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "secure."
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "urgent."
Optional	@TemplateObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@TimeZone	In	inherit	int (4 bytes)	TimeZone this call handler is operating in.
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit timezone from location.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this call handler template (if voice name has already been recorded).

Exceptions

csp_CallhandlerTemplateCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName and @MediaSwitchObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EditMsg

Property Name	Value
Description:	A flag that determines whether the caller can edit messages.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.EditMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.EditMsg." If "tbl_CallHandler.EditMsg" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this is a "primary" call handler for a subscriber, or an "application" call handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.IsPrimary." If "tbl_CallHandler.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLen

Property Name	Value
Description:	The maximum recording length (in seconds) for messages left by unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MaxMsgLen
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MaxMsgLen." If "tbl_CallHandler.MaxMsgLen" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch to use when transferring calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.ObjectId." If "tbl_MediaSwitch.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@OneKeyDelay

Property Name	Value
Description:	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.OneKeyDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.OneKeyDelay." If "tbl_CallHandler.OneKeyDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1500
Direction:	In
Update Column Value From Parameter:	True

@Recipient_ContactObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_ContactObjectId." If "tbl_CallHandler.Recipient_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Recipient_DistributionListObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_DistributionListObjectId." If "tbl_CallHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_SubscriberObjectId." If "tbl_CallHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ScheduleSetObjectId." If "tbl_CallHandler.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SendSecureMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendSecureMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendSecureMsg." If "tbl_CallHandler.SendSecureMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "urgent."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MarkUrgent
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendUrgentMsg." If "tbl_CallHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TemplateObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	Specify the template for this template by providing the @TemplateObjectId parameter.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	TimeZone this call handler is operating in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.TimeZone." If "tbl_CallHandler.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit language from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultLanguage for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit timezone from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultTimeZone for more information.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	Voice file to use for this call handler template (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.32. csp_CallhandlerTemplateDelete

Deletes a CallHandler template object from tbl_CallHandler as specified by the @ObjectId parameter.

Additional Information

This procedure calls csp_CallHandlerDelete, which actually deletes the CallHandler object in tbl_CallHandler.

This procedure also deletes several objects related to a CallHandler template object:

- * Handler (tbl_Handler)
- * CallActions (tbl_CallAction)
- * VoiceName (tbl_StreamFile.FileName)

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the call handler template.

Greetings (tbl_Greeting), transfer options (tbl_TransferOption), and menu entries (tbl_MenuEntry) associated with the call handler template are automatically deleted by SQL via the FK cascade delete.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CallhandlerTemplateDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A CallHandler object matching the value of @ObjectId and IsTemplate = true was not found. The names of the object (template), table (tbl_CallHandler), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.33. csp_CallhandlerTemplateModify

Updates the attributes of a CallHandler template object based on the values passed in via the parameters. The @ObjectId parameter identifies the CallHandler object that is updated. This procedure is used for both primary and non-primary call handlers.

Note that a call handler template cannot be changed into a standard call handler object via the csp_CallhandlerTemplateModify stored procedure.

Additional Information

If a VoiceName is passed in, csp_CallhandlerTemplateModify will update the StreamFile object (executes csp_StreamFileModify).

If the current call handler template has an recipient of one type (subscriber or distribution list) and you want to change to the opposite type, you must explicitly set the old one to NULL and specify the new one. For example, if a call handler template has a subscriber recipient you must pass in NULL for the subscriber objectid as well as the object id of a distribution list in order to make the call handler template have a distribution list recipient.

The client may select to inherit either the language or timezone from the location to which this call handler belongs rather than use the language or timezone specified for the callhandler. See @UseDefaultLanguage and @UseDefaultTimezone for more information.

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterMessage_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Optional	@EditMsg	In	inherit	smallint (2 bytes)	A flag that determines whether the caller can edit messages.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMsgLen	In	inherit	int (4 bytes)	The maximum recording length (in seconds) for messages left by unidentified callers.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	Default switch to use for transfers.
Optional	@OneKeyDelay	In	inherit	int (4 bytes)	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Optional	@Recipient_ContactObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Optional	@Recipient_SubscriberObjectId	In	inherit	char (36 characters)	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ScheduleSetObjectId	In	inherit	char (36 characters)	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Optional	@SendSecureMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "secure."
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller can mark a message as "urgent."
Optional	@TimeZone	In	inherit	int (4 bytes)	TimeZone this call handler is operating in.
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit language from location.
Optional	@UseDefaultTimeZone	In	ignore	smallint (2 bytes)	Set this to 1 to have the call handler template inherit timezone from location.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this call handler template.

Exceptions

csp_CallhandlerTemplateModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A CallHandler object matching the value of @ObjectId and IsTemplate = true was not found. The names of the object (template), table (tbl_CallHandler), and column (ObjectId) are included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EditMsg

Property Name	Value
Description:	A flag that determines whether the caller can edit messages.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_CallHandler.EditMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.EditMsg." If "tbl_CallHandler.EditMsg" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectID." If "tbl_Handler.LocationObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLen

Property Name	Value
Description:	The maximum recording length (in seconds) for messages left by unidentified callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MaxMsgLen
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MaxMsgLen." If "tbl_CallHandler.MaxMsgLen" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectID

Property Name	Value
Description:	Default switch to use for transfers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.MediaSwitchObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.MediaSwitchObjectID." If "tbl_CallHandler.MediaSwitchObjectID" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CallHandler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ObjectId." If "tbl_CallHandler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@OneKeyDelay

Property Name	Value
Description:	The amount of time (in milliseconds) that Cisco Unity Connection waits for additional input after callers press a single key that is not locked. If there is no input within this time, Cisco Unity Connection performs the action assigned to the single key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.OneKeyDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.OneKeyDelay." If "tbl_CallHandler.OneKeyDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1500

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@Recipient_ContactObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a contact, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_ContactObjectId." If "tbl_CallHandler.Recipient_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Recipient_DistributionListObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a distribution list, the unique identifier of the DistributionList object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_DistributionListObjectId." If "tbl_CallHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The recipient for this call handler. If the recipient is a subscriber, the unique identifier of the Subscriber object where the recorded message of a call handler should be routed. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.Recipient_SubscriberObjectId." If "tbl_CallHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScheduleSetObjectId

Property Name	Value
Description:	The unique identifier of the schedule set Cisco Unity Connection will use for making standard versus off hours decisions within this call handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.ScheduleSetObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.ScheduleSetObjectId." If "tbl_CallHandler.ScheduleSetObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SendSecureMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendSecureMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendSecureMsg." If "tbl_CallHandler.SendSecureMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller can mark a message as "urgent."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MarkUrgent
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.SendUrgentMsg." If "tbl_CallHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	TimeZone this call handler is operating in.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallHandler.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CallHandler.TimeZone." If "tbl_CallHandler.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit language from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultLanguage for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseDefaultTimeZone

Property Name	Value
Description:	Set this to 1 to have the call handler template inherit timezone from location.
Notes:	See vw_CallhandlerTemplate.UseDefaultTimeZone for more information.
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this call handler template.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.34. csp_CheckAccessToResource

Determines what access a user has to the specified resource. Retrieves the value of all *Access columns for the specified instance of a User object.

Additional Information

The parameter @UserObjectId must be provided.

Typically the target is the VMS, but the target can be a specific user, handler, distribution list or CVM agency.

This procedure does not check what type of privilege, just that there is one, mainly for those cases where it does not matter.

See the custom type ResourceType for a list of valid resource types.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@UserObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a User object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CreateAccess	Out	ignore	smallint (2 bytes)	Authorization to create a new instance of an object.
Optional	@DeleteAccess	Out	ignore	smallint (2 bytes)	Authorization to delete an object.
Optional	@ExecuteAccess	Out	ignore	smallint (2 bytes)	Authorization to execute (i.e. run) an application.
Optional	@ReadAccess	Out	ignore	smallint (2 bytes)	Authorization to read (i.e., view) an object and its attributes.
Optional	@ResourceType	In	ignore	int (4 bytes)	The type of resource.
Optional	@TargetAgencyObjectId	In	inherit	char (36 characters)	The unique identifier of the Agency object to which this policy applies.
Optional	@TargetDistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object to which this policy applies.
Optional	@TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the Handler object to which this policy applies.
Optional	@TargetUserObjectId	In	inherit	char (36 characters)	The unique identifier of the user object to which this policy applies.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TargetVmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.
Optional	@UpdateAccess	Out	ignore	smallint (2 bytes)	Authorization to change the attribute(s) of an object.
Optional	@VmsObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this policy applies.

Exceptions

csp_CheckAccessToResource will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @UserObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CreateAccess

Property Name	Value
Description:	Authorization to create a new instance of an object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@DeleteAccess

Property Name	Value
Description:	Authorization to delete an object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ExecuteAccess

Property Name	Value
Description:	Authorization to execute (i.e. run) an application.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ReadAccess

Property Name	Value
Description:	Authorization to read (i.e., view) an object and its attributes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ResourceType

Property Name	Value
Description:	The type of resource.
Notes:	See custom type "Resource Type" for a list of valid types.
Business Rules:	
Developer Notes:	The list of Resource Types is derived from the Default Privileges for Default Administrative Roles as specified in Table 6.1 of the Cisco Unity Connection Kubrick Topology Admin FRD.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	ResourceType
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@TargetAgencyObjectId

Property Name	Value
Description:	The unique identifier of the Agency object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetAgencyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetAgencyObjectId." If "tbl_Policy.TargetAgencyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetDistributionListObjectId

Property Name	Value
Description:	The unique identifier of the DistributionList object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetDistributionListObjectId." If "tbl_Policy.TargetDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the Handler object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetHandlerObjectId." If "tbl_Policy.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetUserObjectId

Property Name	Value
Description:	The unique identifier of the user object to which this policy applies.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetUserObjectId." If "tbl_Policy.TargetUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetVmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@UpdateAccess

Property Name	Value
Description:	Authorization to change the attribute(s) of an object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a User object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VmsObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this policy applies.
Notes:	Unless the privilege is for a single specific object (@TargetObjectId contains GUID of default value), the VMSLocation that is set to primary will be the target object.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Policy.TargetVmsObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Policy.TargetVmsObjectId." If "tbl_Policy.TargetVmsObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

6.35. csp_CheckPersonalGroupMembership

Retrieves membership status to a personal group for an object (i.e., Contact, PersonalContact, User, or DistributionList).

Additional Information

The parameters @MemberObjectId and @PersonalGroupObjectId must be provided.

This procedure checks to see if the passed-in ObjectIds actually belong to valid personal contacts, contacts, distribution lists, etc because we don't know the object type and each of these objects live in different places. We would end up doing lots and lots of queries and the whole purpose of this procedure was to minimize queries performed by the personal call routing rules functionality. The proc is being called by one client and they should know what they are doing.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MemberObjectId	In	ignore	char (36 characters)	The unique identifier of the object (i.e., Contact, PersonalContact, User, or DistributionList) for which membership status in a personal group is requested.
Required	@PersonalGroupObjectId	In	ignore	char (36 characters)	The unique identifier of the PersonalGroup for which membership status is requested.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsMember	Out	ignore	smallint (2 bytes)	A flag indicating whether the object specified by @MemberObjectId is a member of the group specified by @PersonalGroupObjectId.

Exceptions

csp_CheckPersonalGroupMembership will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MemberObjectId and @PersonalGroupObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsMember

Property Name	Value
Description:	A flag indicating whether the object specified by @MemberObjectId is a member of the group specified by @PersonalGroupObjectId.
Notes:	Values: 0: @MemberObjectId is not a member of the personal group 1: @MemberObjectId is a member of the personal group
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@MemberObjectId

Property Name	Value
Description:	The unique identifier of the object (i.e., Contact, PersonalContact, User, or DistributionList) for which membership status in a personal group is requested.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PersonalGroupObjectId

Property Name	Value
Description:	The unique identifier of the PersonalGroup for which membership status is requested.
Notes:	An ObjectId is generated using newid().

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.36. csp_ConfigurationModify

Updates the attributes of a specified instance of a Configuration node based on the values passed in via the parameters.

Additional Information

Used by clients to modify the value of a node. The value of the node is passed in as a string. It is converted to the appropriate data type for the Value type column (e.g., ValueBool, ValueDate, etc.) and the respective Value type column is updated. It's important to note that stored procedures are also provided for the purpose of modifying a the value of a configuration node whose data type is known by the client. Refer to the following stored procedures: csp_ConfigurationModifyBool, csp_ConfigurationModifyDate, csp_ConfigurationModifyFloat, csp_ConfigurationModifyGuid, csp_ConfigurationModifyLong and csp_ConfigurationModifyString.

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) NodeName and ParentFullName, or d) Name and ParentId.

When modifying the value of a node using this stored procedure, the stored procedure will automatically validate the new value against metadata stored in another table. The modification operation will not be allowed if the validation fails.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	ignore	lvarchar (512 characters)	The fully qualified name for the node - which is basically a concatenation of the NodeFullName of its parent and its NodeName.
Optional	@MaxVal	In	inherit	int (4 bytes)	For integer values, the maximum allowed value.
Optional	@MinVal	In	inherit	int (4 bytes)	For integer values, the minimum allowed value.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (512 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RegexValidation	In	inherit	nvarchar (64 characters)	For string values, a regular expression string used to validate the string value.
Optional	@RequiresRestart	In	inherit	smallint (2 bytes)	A flag indicating whether or not CUC will need to be restarted if this setting is changed.
Optional	@UserSetting	In	inherit	smallint (2 bytes)	A flag indicating whether this Configuration object is accessible to an end user (administrator). Some settings are essentially internal, and not meant to be configured by end users.
Optional	@Value	In	ignore	lvarchar (512 characters)	Value of configuration node.
Optional	@ValueBool	In	inherit	smallint (2 bytes)	The value of the node if the node is of type bool.
Optional	@ValueDate	In	inherit	datetime (8 bytes)	The value of the node if the node is of type datetime.
Optional	@ValueFloat	In	inherit	float (8 bytes)	The value of the node if the node is of type float.
Optional	@ValueGuid	In	inherit	char (36 characters)	The value of the node if the node is of type ObjectId
Optional	@ValueLong	In	inherit	int (4 bytes)	The value of the node if the node is of type long.
Optional	@ValueString	In	inherit	lvarchar (512 characters)	The value of the node if the node is of type string.

Exceptions

csp_ConfigurationModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."
1140	EXCEPTION_VALUE_MIN	The value specified is below the minimum allowable value for this attribute. The specified value and the minimum allowable value are included in the message.
1141	EXCEPTION_VALUE_MAX	The value specified exceeds the maximum allowable value for this attribute. The specified value and the maximum allowable value are included in the message.
1142	EXCEPTION_VALUE_REGEX	The data in the specified string is invalid according to the validation criteria defined for this attribute.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	The fully qualified name for the node - which is basically a concatenation of the NodeFullName of its parent and its NodeName.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MaxVal

Property Name	Value
Description:	For integer values, the maximum allowed value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.MaxVal
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.MaxVal." If "tbl_Configuration.MaxVal" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MinVal

Property Name	Value
Description:	For integer values, the minimum allowed value.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Configuration.MinVal
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.MinVal." If "tbl_Configuration.MinVal" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@RegexValidation

Property Name	Value
Description:	For string values, a regular expression string used to validate the string value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.RegexValidation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.RegexValidation." If "tbl_Configuration.RegexValidation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RequiresRestart

Property Name	Value
Description:	A flag indicating whether or not CUC will need to be restarted if this setting is changed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.RequiresRestart
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.RequiresRestart." If "tbl_Configuration.RequiresRestart" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UserSetting

Property Name	Value
Description:	A flag indicating whether this Configuration object is accessible to an end user (administrator). Some settings are essentially internal, and not meant to be configured by end users.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.UserSetting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.UserSetting." If "tbl_Configuration.UserSetting" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	Value of configuration node.
Notes:	In string format. This will be converted to the appropriate value type by this stored procedure.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ValueBool

Property Name	Value
Description:	The value of the node if the node is of type bool.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueBool
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueBool." If "tbl_Configuration.ValueBool" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueDate

Property Name	Value
Description:	The value of the node if the node is of type datetime.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueDate." If "tbl_Configuration.ValueDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueFloat

Property Name	Value
Description:	The value of the node if the node is of type float.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueFloat

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	float (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueFloat." If "tbl_Configuration.ValueFloat" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueGuid

Property Name	Value
Description:	The value of the node if the node is of type ObjectID
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueGuid
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueGuid." If "tbl_Configuration.ValueGuid" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueLong

Property Name	Value
Description:	The value of the node if the node is of type long.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueLong
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueLong." If "tbl_Configuration.ValueLong" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueString

Property Name	Value
Description:	The value of the node if the node is of type string.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueString." If "tbl_Configuration.ValueString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.37. csp_ConfigurationModifyBool

Modifies the value of a configuration node whose data type is Custom Type "bool." (Actually a SQL data type of small int, but recognized by Cisco Unity Connection as a Bool.)

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of a Custom Type "bool." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	smallint (2 bytes)	The value of the node if the node is of type bool.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyBool will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Objectld

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type bool.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueBool
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueBool." If "tbl_Configuration.ValueBool" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.38. csp_ConfigurationModifyDate

Modifies the value of a configuration node whose data type is "datetime."

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of "datetime." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	datetime (8 bytes)	The value of the node if the node is of type datetime.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyDate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type datetime.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueDate
Required/Optional Parameter:	Required
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueDate." If "tbl_Configuration.ValueDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.39. csp_ConfigurationModifyFloat

Modifies the value of a configuration node whose data type is "float."

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of "float." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	float (8 bytes)	The value of the node if the node is of type float.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyFloat will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Objectld

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type float.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueFloat
Required/Optional Parameter:	Required
SQL Data Type/Length:	float (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueFloat." If "tbl_Configuration.ValueFloat" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.40. csp_ConfigurationModifyGuid

Modifies the value of a configuration node whose data type is "uniqueidentifier."

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of "uniqueidentifier." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	char (36 characters)	The value of the node if the node is of type ObjectId
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyGuid will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type ObjectID
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueGuid
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueGuid." If "tbl_Configuration.ValueGuid" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.41. csp_ConfigurationModifyLong

Modifies the value of a configuration node whose data type is "long."

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of an "int." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	int (4 bytes)	The value of the node if the node is of type long.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyLong will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Error #	Name	Description
1140	EXCEPTION_VALUE_MIN	The value specified is below the minimum allowable value for this attribute. The specified value and the minimum allowable value are included in the message.
1141	EXCEPTION_VALUE_MAX	The value specified exceeds the maximum allowable value for this attribute. The specified value and the maximum allowable value are included in the message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type long.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueLong
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueLong." If "tbl_Configuration.ValueLong" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.42. csp_ConfigurationModifyString

Modifies the value of a configuration node whose data type is "string."

Additional Information

Used by clients to modify the value of a configuration node by passing a value in the form of a "string." See also "csp_ConfigurationModify."

One of the following combinations of parameters must be passed in to locate the target node: a) FullName, b) Node ID (ObjectId), c) Name and ParentFullName, or d) Name and ParentId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Value	In	inherit	lvarchar (512 characters)	The value of the node if the node is of type string.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.

Exceptions

csp_ConfigurationModifyString will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Value is NULL.
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Error #	Name	Description
1142	EXCEPTION_VALUE_REGEX	The data in the specified string is invalid according to the validation criteria defined for this attribute.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Value

Property Name	Value
Description:	The value of the node if the node is of type string.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueString
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (512 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueString." If "tbl_Configuration.ValueString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.43. csp_ConfigurationRetrieve

Retrieves information about an existing configuration node.

Additional Information

Requires one of the following combinations of parameters to be passed in: a) FullName, b) Node ID (ObjectId) , c) Name and ParentFullName, or d) Name and ParentId. As such none of the parameters for this stored procedure are flagged as "Required" in the data dictionary.

Returns the following data for an existing configuration node:

- * ID of the node
- * The node's value
- * The data type of the node's value
- * Whether the node is a parent (node has children)
- * The name of the component that last changed this node
- * The date and time of the last modification

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Id	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@out_HasChildNodes	Out	ignore	smallint (2 bytes)	Indicates whether the node is a parent (i.e., this node has children).
Optional	@out_Id	Out	inherit	char (36 characters)	The ID of the node.
Optional	@out_LastModifiedByComponent	Out	inherit	lvarchar (256 characters)	The name of the component that last modified this node.
Optional	@out_LastModifiedTime	Out	inherit	datetime (8 bytes)	The date and time of the last modification.
Optional	@out_Type	Out	inherit	int (4 bytes)	Indicates the data type of the node value.
Optional	@out_Value	Out	ignore	lvarchar (512 characters)	Value of the node (represented in a string).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ParentFullName	In	ignore	lvARCHAR (512 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.
Optional	@ValueBool	Out	inherit	smallint (2 bytes)	The value of the node if the node is of type bool.
Optional	@ValueDate	Out	inherit	datetime (8 bytes)	The value of the node if the node is of type datetime.
Optional	@ValueFloat	Out	inherit	float (8 bytes)	The value of the node if the node is of type float.
Optional	@ValueGuid	Out	inherit	char (36 characters)	The value of the node if the node is of type ObjectId
Optional	@ValueLong	Out	inherit	int (4 bytes)	The value of the node if the node is of type long.
Optional	@ValueString	Out	inherit	lvARCHAR (512 characters)	The value of the node if the node is of type string.

Exceptions

csp_ConfigurationRetrieve will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Id

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@out_HasChildNodes

Property Name	Value
Description:	Indicates whether the node is a parent (i.e., this node has children).

Property Name	Value
Notes:	Values: 0: Node is not a parent (no children exist) 1: Node is a parent (children exist)
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@out_Id

Property Name	Value
Description:	The ID of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@out_LastModifiedByComponent

Property Name	Value
Description:	The name of the component that last modified this node.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Configuration.LastModifiedByComponent
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ComponentName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.LastModifiedByComponent." If "tbl_Configuration.LastModifiedByComponent" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@out_LastModifiedTime

Property Name	Value
Description:	The date and time of the last modification.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.LastModifiedTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.LastModifiedTime." If "tbl_Configuration.LastModifiedTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@out_Type

Property Name	Value
Description:	Indicates the data type of the node value.
Notes:	Possible node data types are bool, datetime, float, long, string, and null.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Type
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	ConfigurationNodeType
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Type." If "tbl_Configuration.Type" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	Out
Update Column Value From Parameter:	True

@out_Value

Property Name	Value
Description:	Value of the node (represented in a string).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ValueBool

Property Name	Value
Description:	The value of the node if the node is of type bool.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueBool
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueBool." If "tbl_Configuration.ValueBool" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@ValueDate

Property Name	Value
Description:	The value of the node if the node is of type datetime.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueDate." If "tbl_Configuration.ValueDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@ValueFloat

Property Name	Value
Description:	The value of the node if the node is of type float.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueFloat
Required/Optional Parameter:	Optional
SQL Data Type/Length:	float (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueFloat." If "tbl_Configuration.ValueFloat" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@ValueGuid

Property Name	Value
Description:	The value of the node if the node is of type ObjectID
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueGuid
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueGuid." If "tbl_Configuration.ValueGuid" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@ValueLong

Property Name	Value
Description:	The value of the node if the node is of type long.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueLong
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueLong." If "tbl_Configuration.ValueLong" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

@ValueString

Property Name	Value
Description:	The value of the node if the node is of type string.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ValueString
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvvarchar (512 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ValueString." If "tbl_Configuration.ValueString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	Out
Update Column Value From Parameter:	True

6.44. csp_ConfigurationRetrieveType

Returns the configuration node type, e.g., 4 (= "Float" type).

Additional Information

Requires one of the following combinations of parameters to be passed in: a) FullName, b) Node ID (ObjectId) , c) Name and ParentFullName, or d) Name and ParentId.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@FullName	In	inherit	lvarchar (380 characters)	The fully qualified name of the node.
Optional	@Name	In	inherit	lvarchar (256 characters)	The text name of the node.
Optional	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Optional	@ParentFullName	In	ignore	lvarchar (380 characters)	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Optional	@ParentId	In	inherit	char (36 characters)	The unique identifier of the node parent.
Optional	@Type	Out	inherit	int (4 bytes)	The data type of the node value.

Exceptions

csp_ConfigurationRetrieveType will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The node was not found for the object "Configuration node" in table "vw_Configuration."

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	The fully qualified name of the node.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.FullName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.FullName." If "tbl_Configuration.FullName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	ConfigurationName
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Name." If "tbl_Configuration.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Configuration node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ObjectId." If "tbl_Configuration.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ParentFullName

Property Name	Value
Description:	The fully qualified text name (e.g., "System.Notifier.Database.Server") of the parent node.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ParentId

Property Name	Value
Description:	The unique identifier of the node parent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.ParentId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.ParentId." If "tbl_Configuration.ParentId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Type

Property Name	Value
Description:	The data type of the node value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Configuration.Type
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	ConfigurationNodeType
Null Handling:	Inherit - inherit parameter value from "tbl_Configuration.Type." If "tbl_Configuration.Type" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	Out
Update Column Value From Parameter:	True

6.45. csp_ConfigurationValueModify

Modify a configuration value based on full name and string version of the value.

Additional Information

This is a simplified version of the configuration data proc to match with the simplified view vw_ConfigurationValue.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FullName	In	ignore	lvarchar (380 characters)	Full name of the value
Required	@Value	In	ignore	lvarchar (512 characters)	Value (as string)
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	Alias of user on whose behalf the sproc is being called.
Optional	@AuditComponent	In	ignore	vchar (64 characters)	Component that is calling this stored procedure

Exceptions

csp_ConfigurationValueModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1140	EXCEPTION_VALUE_MIN	The value specified is below the minimum allowable value for this attribute. The specified value and the minimum allowable value are included in the message.
1141	EXCEPTION_VALUE_MAX	The value specified exceeds the maximum allowable value for this attribute. The specified value and the maximum allowable value are included in the message.
1142	EXCEPTION_VALUE_REGEX	The data in the specified string is invalid according to the validation criteria defined for this attribute.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Alias of user on whose behalf the sproc is being called.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component that is calling this stored procedure
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FullName

Property Name	Value
Description:	Full name of the value
Notes:	The full name (e.g. "key.subkey.value")
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvvarchar (380 characters)
Custom Type:	ConfigurationFullName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Value

Property Name	Value
Description:	Value (as string)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.46. csp_ContactCreate

Creates a contact representing a user in a remote mail system by inserting a new row into tbl_Contact. In addition to creating a new Contact object, this procedure also creates several Contact related objects:

- * A DtmfAccessId object by inserting a new row into tbl_DtmfAccessId.
- * An Alias object is created in the tbl_Alias table by calling csp_AliasCreate.
- * If the parameter @VoiceName contains a value other than NULL, a StreamFile object is created with the value of tbl_StreamFile.FileName = @VoiceName. If this value is specified, it must be a filename that was allocated using csp_AllocateVoiceFile. If not specified, a filename will be generated.

Additional Information

The parameter @Alias must be provided.

If @LocationObjectId is not provided or is NULL, it is set to the objectid of the primary LocationVMS.

If @DisplayName is not provided, it will be set to the same value as @Alias.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AddToDefaultDistributionList	In	explicit-with-default	smallint (2 bytes)	Controls if this contact will be added to the "All Voicemail-Enabled Contacts" distribution list when it is created. True means the contact will be added, False means it won't. Default value is False.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallHandlerTemplate ObjectId	In	ignore	char (36 characters)	The object id of the call handler template to be used for this contact. If NULL, then use the default call handler template
Optional	@DeliveryLocationObje ctId	In	inherit	char (36 characters)	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).
Optional	@DisableOutbound	In	inherit	smallint (2 bytes)	For an AMIS remote contact, indicates no messages are being delivered to this target
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of a contact. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of a contact, by which a contact is commonly known.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the contact in the phone directory for outside callers.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this contact belongs.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Optional	@RemoteAddress	In	inherit	lvarchar (256 characters)	A mail address on the remote system.
Optional	@TransferEnabled	In	ignore	smallint (2 bytes)	Transfer enabled?

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransferExtension	In	inherit	nvarchar (40 characters)	The extension (phone number) to transfer to.
Optional	@TransferRings	In	inherit	smallint (2 bytes)	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Optional	@TransferType	In	inherit	smallint (2 bytes)	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Optional	@VoiceName	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

csp_ContactCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. A default LocationVMS object was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AddToDefaultDistributionList

Property Name	Value
Description:	Controls if this contact will be added to the "All Voicemail-Enabled Contacts" distribution list when it is created. True means the contact will be added, False means it won't. Default value is False.
Notes:	
Business Rules:	
Developer Notes:	The functionality of this parameter can be replaced in the future if Contact templates are ever used since they will specify what DL gets used.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AltFirstName

Property Name	Value
Description:	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.AltFirstName." If "tbl_Contact.AltFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.AltLastName." If "tbl_Contact.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerTemplateObjectId

Property Name	Value
Description:	The object id of the call handler template to be used for this contact. If NULL, then use the default call handler template
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DeliveryLocationObjectID

Property Name	Value
Description:	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DeliveryLocationObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DeliveryLocationObjectID." If "tbl_Contact.DeliveryLocationObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DirectoryId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	lvvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DirectoryId." If "tbl_Contact.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisableOutbound

Property Name	Value
Description:	For an AMIS remote contact, indicates no messages are being delivered to this target
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DisableOutbound
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DisableOutbound." If "tbl_Contact.DisableOutbound" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DisplayName." If "tbl_Contact.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of a contact. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.FirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.FirstName." If "tbl_Contact.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of a contact, by which a contact is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.LastName." If "tbl_Contact.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the contact in the phone directory for outside callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ListInDirectory." If "tbl_Contact.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this contact belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.LocationObjectId." If "tbl_Contact.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ObjectId." If "tbl_Contact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RemoteAddress

Property Name	Value
Description:	A mail address on the remote system.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.RemoteAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.RemoteAddress." If "tbl_Contact.RemoteAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransferEnabled

Property Name	Value
Description:	Transfer enabled?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferExtension

Property Name	Value
Description:	The extension (phone number) to transfer to.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Extension
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Extension." If "tbl_TransferOption.Extension" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferRings

Property Name	Value
Description:	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.TransferRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.TransferRings." If "tbl_Contact.TransferRings" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferType

Property Name	Value
Description:	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.TransferType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferType

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.TransferType." If "tbl_Contact.TransferType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.47. csp_ContactDelete

Deletes a Contact object from tbl_Contact as specified by the @ObjectId parameter.

Additional Information

This procedure also deletes some Contact related objects:

- * The contact's DtmfAccessId is removed by deleting the associated row from tbl_DtmfAccessId.
- * The contact's Alias is removed by deleting the associated row from tbl_Alias.
- * If the contact has a recorded voice name, the associated StreamFile object is removed by calling csp_StreamFileDelete.

If the Contact is a member or a PersonalGroup, its membership is removed. Likewise, if the contact is associated with any PersonalRuleCaller objects, they are also removed.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_ContactDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The Contact object was not found. The names of the object (Contact), table (tbl_Contact), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Contact), and the column (---) are included with the exception message. The active transaction is rolled back.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ObjectId." If "tbl_Contact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.48. csp_ContactModify

Updates the attributes of a Contact object based on the values passed in via the parameters. The @ObjectId parameter identifies the Contact object that is updated.

Additional Information

DTMF names are not regenerated (for performance reasons) unless specified.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AltFirstName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AltLastName	In	inherit	nvarchar (64 characters)	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DeliveryLocationObjectId	In	inherit	char (36 characters)	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Optional	@DirectoryId	In	inherit	lvarchar (2048 characters)	The identifier of a user in a corporate directory (such as Active Directory).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisableOutbound	In	inherit	smallint (2 bytes)	For an AMIS remote contact, indicates no messages are being delivered to this target
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.
Optional	@FirstName	In	inherit	nvarchar (64 characters)	The first name (i.e., givenName) of a contact. Not their surname nor middle name.
Optional	@LastName	In	inherit	nvarchar (64 characters)	The last name (i.e., surname or family name) of a contact, by which a contact is commonly known.
Optional	@ListInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should list the contact in the phone directory for outside callers.
Optional	@RemoteAddress	In	inherit	lvarchar (256 characters)	A mail address on the remote system.
Optional	@TransferEnabled	In	ignore	smallint (2 bytes)	Transfer enabled?
Optional	@TransferExtension	In	inherit	nvarchar (40 characters)	The extension (phone number) to transfer to.
Optional	@TransferRings	In	inherit	smallint (2 bytes)	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Optional	@TransferType	In	inherit	smallint (2 bytes)	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Optional	@VoiceName	In	explicit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

csp_ContactModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The Contact object was not found. The names of the object (Contact), table (tbl_Contact), and column (ObjectId) are included with the exception message.

Parameter Properties

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AltFirstName

Property Name	Value
Description:	Alternate spelling of a contact's first name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.AltFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.AltFirstName." If "tbl_Contact.AltFirstName" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AltLastName

Property Name	Value
Description:	Alternate spelling of a contact's last name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing, and for VUI client name lookup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.AltLastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AltName
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.AltLastName." If "tbl_Contact.AltLastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DeliveryLocationObjectId

Property Name	Value
Description:	The unique identifier of the location to which this contact's messages will be sent. Currently, this is a LocationVPIM, but in the future as we add other types of interops it could be another type of Location such as LocationOctel or LocationAMIS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DeliveryLocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DeliveryLocationObjectId." If "tbl_Contact.DeliveryLocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DirectoryId

Property Name	Value
Description:	The identifier of a user in a corporate directory (such as Active Directory).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DirectoryId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (2048 characters)
Custom Type:	DirectoryId
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DirectoryId." If "tbl_Contact.DirectoryId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisableOutbound

Property Name	Value
Description:	For an AMIS remote contact, indicates no messages are being delivered to this target
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DisableOutbound
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DisableOutbound." If "tbl_Contact.DisableOutbound" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of a person to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.DisplayName." If "tbl_Contact.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FirstName

Property Name	Value
Description:	The first name (i.e., givenName) of a contact. Not their surname nor middle name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.FirstName
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.FirstName." If "tbl_Contact.FirstName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LastName

Property Name	Value
Description:	The last name (i.e., surname or family name) of a contact, by which a contact is commonly known.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.LastName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Name
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.LastName." If "tbl_Contact.LastName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectory

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should list the contact in the phone directory for outside callers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ListInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ListInDirectory." If "tbl_Contact.ListInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.ObjectId." If "tbl_Contact.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RemoteAddress

Property Name	Value
Description:	A mail address on the remote system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.RemoteAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.RemoteAddress." If "tbl_Contact.RemoteAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TransferEnabled

Property Name	Value
Description:	Transfer enabled?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferExtension

Property Name	Value
Description:	The extension (phone number) to transfer to.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_TransferOption.Extension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_TransferOption.Extension." If "tbl_TransferOption.Extension" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TransferRings

Property Name	Value
Description:	The number of times the extension rings before Cisco Unity Connection considers it a "ring no answer" and plays the subscriber or handler greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.TransferRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.TransferRings." If "tbl_Contact.TransferRings" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferType

Property Name	Value
Description:	The type of call transfer Cisco Unity Connection will perform - supervised or unsupervised (also referred to as "Release to Switch" transfer).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Contact.TransferType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TransferType
Null Handling:	Inherit - inherit parameter value from "tbl_Contact.TransferType." If "tbl_Contact.TransferType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.49. csp_ConversationCreate

Creates a new Conversation object by inserting a new row into tbl_Conversation. This procedure is not used by clients. It is used to create default conversations during installation.

Additional Information

The parameter @ConversationName must be supplied. This procedure is not used by clients. It is used during installation of the default conversations.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ConversationName	In	inherit	nvarchar (64 characters)	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Required	@TextName	In	inherit	varchar (192 characters)	Localization key used to lookup the localized name in tbl_LocalizedText.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	Component name for the auditing.
Optional	@CnvCallHandlerAfter Greeting	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call, after a greeting is played. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Optional	@CnvCallHandlerAfter Message	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the call handler. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Optional	@CnvCallHandlerCaller Input	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be assigned to user input keys for a call handler greeting. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CnvDirectoryHandlerExit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses * to exit.
Optional	@CnvDirectoryHandlerNoInput	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller does not respond to the name entry prompt.
Optional	@CnvDirectoryHandlerNoSelection	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller enters a name but does not select an item from the resulting match list, or when the Play All Names is enabled and the caller does not respond to prompts.
Optional	@CnvDirectoryHandlerZeroExit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses the zero ("0") key.
Optional	@CnvInterviewHandlerAfterMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the interview handler.
Optional	@CnvRoutingRuleDirectCall	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination in a call routing rule for a direct call.
Optional	@CnvRoutingRuleForwardedCall	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination in a call routing rule for a forwarded call.
Optional	@CnvSubscriberAfterGreeting	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call, after a subscriber greeting is played.
Optional	@CnvSubscriberAfterMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for a subscriber.
Optional	@CnvSubscriberCallerInput	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be assigned to user input keys for a subscriber greeting.
Optional	@CnvSubscriberExit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination when exiting a subscriber conversation.
Optional	@CnvSubscriberMainConv	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be used as a subscriber main conversation.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@IsVui	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation is a VUI conversation.
Optional	@RequiresCallHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a call handler object is required as input to the conversation.
Optional	@RequiresDirectoryHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a directory handler object is required as input to the conversation.
Optional	@RequiresInterviewHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a interview handler object is required as input to the conversation.
Optional	@RequiresSubscriber	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber object is required as input to the conversation.

Exceptions

csp_ConversationCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ConversationName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CnvCallHandlerAfterGreeting

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call, after a greeting is played. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerAfterGreeting." If "tbl_Conversation.CnvCallHandlerAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CnvCallHandlerAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the call handler. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerAfterMessage." If "tbl_Conversation.CnvCallHandlerAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvCallHandlerCallerInput

Property Name	Value
Description:	A flag indicating whether the conversation can be assigned to user input keys for a call handler greeting. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerCallerInput
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerCallerInput." If "tbl_Conversation.CnvCallHandlerCallerInput" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerExit

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses * to exit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerExit." If "tbl_Conversation.CnvDirectoryHandlerExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerNoInput

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller does not respond to the name entry prompt.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerNoInput
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerNoInput." If "tbl_Conversation.CnvDirectoryHandlerNoInput" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerNoSelection

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller enters a name but does not select an item from the resulting match list, or when the Play All Names is enabled and the caller does not respond to prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerNoSelection
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerNoSelection." If "tbl_Conversation.CnvDirectoryHandlerNoSelection" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerZeroExit

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses the zero ("0") key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerZeroExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerZeroExit." If "tbl_Conversation.CnvDirectoryHandlerZeroExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvInterviewHandlerAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the interview handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvInterviewHandlerAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvInterviewHandlerAfterMessage." If "tbl_Conversation.CnvInterviewHandlerAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvRoutingRuleDirectCall

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination in a call routing rule for a direct call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvRoutingRuleDirectCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvRoutingRuleDirectCall." If "tbl_Conversation.CnvRoutingRuleDirectCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvRoutingRuleForwardedCall

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination in a call routing rule for a forwarded call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvRoutingRuleForwardedCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvRoutingRuleForwardedCall." If "tbl_Conversation.CnvRoutingRuleForwardedCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberAfterGreeting

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call, after a subscriber greeting is played.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberAfterGreeting." If "tbl_Conversation.CnvSubscriberAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberAfterMessage." If "tbl_Conversation.CnvSubscriberAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberCallerInput

Property Name	Value
Description:	A flag indicating whether the conversation can be assigned to user input keys for a subscriber greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberCallerInput
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberCallerInput." If "tbl_Conversation.CnvSubscriberCallerInput" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberExit

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination when exiting a subscriber conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberExit." If "tbl_Conversation.CnvSubscriberExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberMainConv

Property Name	Value
Description:	A flag indicating whether the conversation can be used as a subscriber main conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberMainConv
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberMainConv." If "tbl_Conversation.CnvSubscriberMainConv" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConversationName

Property Name	Value
Description:	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.ConversationName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.ConversationName." If "tbl_Conversation.ConversationName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsVui

Property Name	Value
Description:	A flag indicating whether the conversation is a VUI conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.IsVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.IsVui." If "tbl_Conversation.IsVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresCallHandler

Property Name	Value
Description:	A flag indicating whether a call handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresCallHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresCallHandler." If "tbl_Conversation.RequiresCallHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresDirectoryHandler

Property Name	Value
Description:	A flag indicating whether a directory handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresDirectoryHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresDirectoryHandler." If "tbl_Conversation.RequiresDirectoryHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresInterviewHandler

Property Name	Value
Description:	A flag indicating whether a interview handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresInterviewHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresInterviewHandler." If "tbl_Conversation.RequiresInterviewHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresSubscriber

Property Name	Value
Description:	A flag indicating whether a subscriber object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresSubscriber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresSubscriber." If "tbl_Conversation.RequiresSubscriber" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TextName

Property Name	Value
Description:	Localization key used to lookup the localized name in tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.TextName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (192 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.TextName." If "tbl_Conversation.TextName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.50. csp_ConversationDelete

Deletes a Conversation from tbl_Conversation as specified by the @TextName parameter.

Additional Information

This procedure is not used by clients.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ConversationName	In	inherit	nvarchar (64 characters)	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_ConversationDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ConversationName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The conversation object specified by @ConversationName was not found. The names of the object (Conversation), table (tbl_Conversation), and column (ConversationName) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_conversation), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ConversationName

Property Name	Value
Description:	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.ConversationName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.ConversationName." If "tbl_Conversation.ConversationName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.51. csp_ConversationModify

Updates the attributes of a Conversation object based on the values passed in via the parameters. The @TextName parameter identifies the Conversation object that is updated.

Additional Information

This procedure is not used by clients. It is used during installation of the default conversations.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ConversationName	In	inherit	nvarchar (64 characters)	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	Component name for the auditing.
Optional	@CnvCallHandlerAfter Greeting	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call, after a greeting is played. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Optional	@CnvCallHandlerAfter Message	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the call handler. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Optional	@CnvCallHandlerCaller Input	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be assigned to user input keys for a call handler greeting. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Optional	@CnvDirectoryHandler Exit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses * to exit.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CnvDirectoryHandlerNoInput	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller does not respond to the name entry prompt.
Optional	@CnvDirectoryHandlerNoSelection	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller enters a name but does not select an item from the resulting match list, or when the Play All Names is enabled and the caller does not respond to prompts.
Optional	@CnvDirectoryHandlerZeroExit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses the zero ("0") key.
Optional	@CnvInterviewHandlerAfterMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the interview handler.
Optional	@CnvRoutingRuleDirectCall	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination in a call routing rule for a direct call.
Optional	@CnvRoutingRuleForwardedCall	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be a destination in a call routing rule for a forwarded call.
Optional	@CnvSubscriberAfterGreeting	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call, after a subscriber greeting is played.
Optional	@CnvSubscriberAfterMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for a subscriber.
Optional	@CnvSubscriberCallerInput	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be assigned to user input keys for a subscriber greeting.
Optional	@CnvSubscriberExit	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be the destination when exiting a subscriber conversation.
Optional	@CnvSubscriberMainConv	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation can be used as a subscriber main conversation.
Optional	@IsVui	In	inherit	smallint (2 bytes)	A flag indicating whether the conversation is a VUI conversation.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RequiresCallHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a call handler object is required as input to the conversation.
Optional	@RequiresDirectoryHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a directory handler object is required as input to the conversation.
Optional	@RequiresInterviewHandler	In	inherit	smallint (2 bytes)	A flag indicating whether a interview handler object is required as input to the conversation.
Optional	@RequiresSubscriber	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber object is required as input to the conversation.
Optional	@TextName	In	inherit	varchar (192 characters)	Localization key used to lookup the localized name in tbl_LocalizedText.

Exceptions

csp_ConversationModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ConversationName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The conversation object specified by @ConversationName was not found. The names of the object (Conversation), table (tbl_Conversation), and column (ConversationName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CnvCallHandlerAfterGreeting

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call, after a greeting is played. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerAfterGreeting." If "tbl_Conversation.CnvCallHandlerAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvCallHandlerAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the call handler. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerAfterMessage." If "tbl_Conversation.CnvCallHandlerAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvCallHandlerCallerInput

Property Name	Value
Description:	A flag indicating whether the conversation can be assigned to user input keys for a call handler greeting. This flag applies to "application" call handlers, not primary call handlers belonging to a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvCallHandlerCallerInput
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvCallHandlerCallerInput." If "tbl_Conversation.CnvCallHandlerCallerInput" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerExit

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses * to exit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerExit." If "tbl_Conversation.CnvDirectoryHandlerExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerNoInput

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller does not respond to the name entry prompt.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerNoInput
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerNoInput." If "tbl_Conversation.CnvDirectoryHandlerNoInput" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerNoSelection

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller enters a name but does not select an item from the resulting match list, or when the Play All Names is enabled and the caller does not respond to prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerNoSelection
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerNoSelection." If "tbl_Conversation.CnvDirectoryHandlerNoSelection" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvDirectoryHandlerZeroExit

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination from a directory handler when the caller presses the zero ("0") key.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Conversation.CnvDirectoryHandlerZeroExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvDirectoryHandlerZeroExit." If "tbl_Conversation.CnvDirectoryHandlerZeroExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvInterviewHandlerAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for the interview handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvInterviewHandlerAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvInterviewHandlerAfterMessage." If "tbl_Conversation.CnvInterviewHandlerAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvRoutingRuleDirectCall

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination in a call routing rule for a direct call.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Conversation.CnvRoutingRuleDirectCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvRoutingRuleDirectCall." If "tbl_Conversation.CnvRoutingRuleDirectCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvRoutingRuleForwardedCall

Property Name	Value
Description:	A flag indicating whether the conversation can be a destination in a call routing rule for a forwarded call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvRoutingRuleForwardedCall
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvRoutingRuleForwardedCall." If "tbl_Conversation.CnvRoutingRuleForwardedCall" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberAfterGreeting

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call, after a subscriber greeting is played.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Conversation.CnvSubscriberAfterGreeting
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberAfterGreeting." If "tbl_Conversation.CnvSubscriberAfterGreeting" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberAfterMessage

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination for a call after a caller leaves a message for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberAfterMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberAfterMessage." If "tbl_Conversation.CnvSubscriberAfterMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberCallerInput

Property Name	Value
Description:	A flag indicating whether the conversation can be assigned to user input keys for a subscriber greeting.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Conversation.CnvSubscriberCallerInput
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberCallerInput." If "tbl_Conversation.CnvSubscriberCallerInput" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberExit

Property Name	Value
Description:	A flag indicating whether the conversation can be the destination when exiting a subscriber conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberExit." If "tbl_Conversation.CnvSubscriberExit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CnvSubscriberMainConv

Property Name	Value
Description:	A flag indicating whether the conversation can be used as a subscriber main conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.CnvSubscriberMainConv

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.CnvSubscriberMainConv." If "tbl_Conversation.CnvSubscriberMainConv" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ConversationName

Property Name	Value
Description:	The name of the conversation that can be used to identify a conversation. A subscriber uses this for message retrieval, sending, and setup; or the target of a call routing rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.ConversationName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.ConversationName." If "tbl_Conversation.ConversationName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsVui

Property Name	Value
Description:	A flag indicating whether the conversation is a VUI conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.IsVui
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.IsVui." If "tbl_Conversation.IsVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresCallHandler

Property Name	Value
Description:	A flag indicating whether a call handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresCallHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresCallHandler." If "tbl_Conversation.RequiresCallHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresDirectoryHandler

Property Name	Value
Description:	A flag indicating whether a directory handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresDirectoryHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresDirectoryHandler." If "tbl_Conversation.RequiresDirectoryHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresInterviewHandler

Property Name	Value
Description:	A flag indicating whether a interview handler object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresInterviewHandler
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresInterviewHandler." If "tbl_Conversation.RequiresInterviewHandler" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequiresSubscriber

Property Name	Value
Description:	A flag indicating whether a subscriber object is required as input to the conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.RequiresSubscriber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.RequiresSubscriber." If "tbl_Conversation.RequiresSubscriber" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TextName

Property Name	Value
Description:	Localization key used to lookup the localized name in tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Conversation.TextName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (192 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Conversation.TextName." If "tbl_Conversation.TextName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.52. csp_CosCreate

Creates a collection of service privileges (Class Of Service) for subscribers that control access to features and use of the system by inserting a new row into tbl_COS.

Additional Information

The parameter @DisplayName must be provided.

If @LocationObjectId is not provided or is NULL, it is set to the objectid of the primary LocationVMS.

If @FaxRestrictionObjectId is NULL, the default fax RestrictionTable object is used.

If @OutcallRestrictionObjectId is NULL, the default outdial RestrictionTable object is used.

If @XferRestrictionObjectId is NULL, the default transfer RestrictionTable object is used.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this COS , e.g. "Default COS," "Basic Voice Mail." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@AccessAdvancedUser Features	In	inherit	smallint (2 bytes)	A flag indicating whether or not the subscriber has access to advanced user features. Currently, there are two advanced user features: TTS and VUI.
Optional	@AccessCallRoutingRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can access personal call routing rules.
Optional	@AccessFaxMail	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS is allowed to manage their fax messages over the phone or from the Cisco Unity Connection Inbox.
Optional	@AccessIMAP	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can access VM via an IMAP client.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AccessLiveReply	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can after listening to a message from another subscriber press 4-4, and Cisco Unity Connection will call the subscriber who left the message. Generally referred to as "Live Reply."
Optional	@AccessTts	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can have to their e-mail messages read to them by an e-mail reader over the phone.
Optional	@AccessUnifiedClient	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber can use the unified client.
Optional	@AccessVmi	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can use the Cisco Unity Connection Inbox to listen to, compose, reply to, forward, and delete voice messages. If the subscriber has "AccessFaxMail" set, they can also use it to manage their faxes. This is a licensed feature.
Optional	@AccessVui	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can use the voice driven inbox conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallHoldAvailable	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to change their own call holding options by using the Cisco Unity Connection Assistant. Call holding settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CallScreenAvailable	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to change their own call screening options by using the Cisco Unity Assistant. Call screening settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Optional	@CanRecordName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can record their own name.
Optional	@CanSendToPublicDL	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can send messages to system (formerly called "public") distribution lists.
Optional	@EnableEnhancedSecurity	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber uses regular or enhanced phone security. Enhanced phone security adds RSA two-factor authentication to regular security.
Optional	@FaxRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier for the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in fax dialing settings.
Optional	@ImapCanFetchMessageBody	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can fetch the body of a non-private message using IMAP.
Optional	@ImapCanFetchPrivateMessageBody	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can fetch the body of a private message using IMAP.
Optional	@ListInDirectoryStatus	In	inherit	smallint (2 bytes)	A flag indicating whether subscribers can choose to be listed or not in the phone directory. The phone directory (directory assistance) is the audio listing that subscribers and unidentified callers use to reach subscribers and to leave messages.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS to which this COS belongs.
Optional	@MaxGreetingLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording their greeting.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MaxMembersPVL	In	inherit	int (4 bytes)	The maximum number of members allowed in a personal voice mail list.
Optional	@MaxMsgLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording messages and conversations.
Optional	@MaxNameLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording their voice name.
Optional	@MaxPrivateDlists	In	inherit	smallint (2 bytes)	The maximum number of personal voice mail lists the subscriber is allowed to create.
Optional	@MovetoDeleteFolder	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection moves deleted messages for the subscriber to a Deleted Items folder or physically deletes the message. True='deletion' moves messages to the DeletedItems folder, where it ages until it evaporates. False='deletion' physically deletes the message
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Optional	@OutcallRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in message delivery settings. The restriction table also restricts the subscriber extensions that Cisco Unity Connection dials when the phone is selected as the recording and playback device for the Media Master.
Optional	@PersonalAdministrator	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows a subscriber to use the Cisco Unity Assistant to personalize their Cisco Unity Connection setting -- including their recorded greetings and message delivery options -- or to set up message notification devices and create private lists.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	A flag indicating that this COS is read only. It cannot be modified from the SA.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@RequireSecureMessages	In	inherit	int (4 bytes)	Specifies when to mark message secure
Optional	@SendBroadcastMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to send broadcast messages to all subscribers on the VMS.
Optional	@UaAlternateExtensionAccess	In	inherit	smallint (2 bytes)	The abilities a subscriber has to manage administer-defined alternate extensions assigned to the subscriber. Determines whether subscribers can view the administrator-defined alternate extensions, and whether subscribers can manage (add, modify, and delete) their own set of alternate extensions in the Cisco Unity Assistant. If enabled, subscribers can define up to 5 alternate extensions in addition to the 9 alternate extensions that an administrator can define for them.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this COS can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@WarnIntervalMsgEnd	In	inherit	int (4 bytes)	The amount of time (in milliseconds) before the end of the maximum recording time when Cisco Unity Connection will play a warning tone or WAV file to indicate to the caller that they are almost out of recording time.
Optional	@WarnMinMsgLength	In	inherit	int (4 bytes)	The minimum length (in milliseconds) that the maximum recording time has to be before the record termination warning feature is active. When the record termination feature is active, Cisco Unity Connection plays a warning tone indicating to the caller that they are almost out of recording time.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@XferRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in call transfer settings.

Exceptions

csp_CosCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause this procedure to throw an Object Not Found Exception: 1. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. The RestrictionTable object specified by either the @FaxRestrictionObjectId, @OutcallRestrictionObjectId, or @XferRestrictionObjectId was not found. The names of the object (Restriction table), table (tbl_RestrictionTable), and column (ObjectId) are included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	A system configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AccessAdvancedUserFeatures

Property Name	Value
Description:	A flag indicating whether or not the subscriber has access to advanced user features. Currently, there are two advanced user features: TTS and VUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessAdvancedUserFeatures
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessAdvancedUserFeatures." If "tbl_Cos.AccessAdvancedUserFeatures" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessCallRoutingRules

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can access personal call routing rules.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessCallRoutingRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessCallRoutingRules." If "tbl_Cos.AccessCallRoutingRules" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessFaxMail

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS is allowed to manage their fax messages over the phone or from the Cisco Unity Connection Inbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessFaxMail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessFaxMail." If "tbl_Cos.AccessFaxMail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessIMAP

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can access VM via an IMAP client.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessIMAP
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessIMAP." If "tbl_Cos.AccessIMAP" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessLiveReply

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can after listening to a message from another subscriber press 4-4, and Cisco Unity Connection will call the subscriber who left the message. Generally referred to as "Live Reply."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessLiveReply
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessLiveReply." If "tbl_Cos.AccessLiveReply" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessTts

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can have to their e-mail messages read to them by an e-mail reader over the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessTts." If "tbl_Cos.AccessTts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessUnifiedClient

Property Name	Value
Description:	A flag indicating whether a subscriber can use the unified client.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessUnifiedClient
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessUnifiedClient." If "tbl_Cos.AccessUnifiedClient" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessVmi

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can use the Cisco Unity Connection Inbox to listen to, compose, reply to, forward, and delete voice messages. If the subscriber has "AccessFaxMail" set, they can also use it to manage their faxes. This is a licensed feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessVmi
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessVmi." If "tbl_Cos.AccessVmi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessVui

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can use the voice driven inbox conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessVui." If "tbl_Cos.AccessVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHoldAvailable

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to change their own call holding options by using the Cisco Unity Connection Assistant. Call holding settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CallHoldAvailable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CallHoldAvailable." If "tbl_Cos.CallHoldAvailable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CallScreenAvailable

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to change their own call screening options by using the Cisco Unity Assistant. Call screening settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CallScreenAvailable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CallScreenAvailable." If "tbl_Cos.CallScreenAvailable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CanRecordName

Property Name	Value
Description:	A flag indicating whether the subscriber can record their own name.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CanRecordName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CanRecordName." If "tbl_Cos.CanRecordName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@CanSendToPublicDI

Property Name	Value
Description:	A flag indicating whether the subscriber can send messages to system (formerly called "public") distribution lists.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CanSendToPublicDI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CanSendToPublicDI." If "tbl_Cos.CanSendToPublicDI" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this COS , e.g. "Default COS," "Basic Voice Mail." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Cos.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.DisplayName." If "tbl_Cos.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnableEnhancedSecurity

Property Name	Value
Description:	A flag indicating whether the subscriber uses regular or enhanced phone security. Enhanced phone security adds RSA two-factor authentication to regular security.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.EnableEnhancedSecurity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.EnableEnhancedSecurity." If "tbl_Cos.EnableEnhancedSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@FaxRestrictionObjectId

Property Name	Value
Description:	The unique identifier for the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in fax dialing settings.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.FaxRestrictionObjectId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.FaxRestrictionObjectId." If "tbl_Cos.FaxRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ImapCanFetchMessageBody

Property Name	Value
Description:	A flag indicating whether the subscriber can fetch the body of a non-private message using IMAP.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ImapCanFetchMessageBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ImapCanFetchMessageBody." If "tbl_Cos.ImapCanFetchMessageBody" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ImapCanFetchPrivateMessageBody

Property Name	Value
Description:	A flag indicating whether the subscriber can fetch the body of a private message using IMAP.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ImapCanFetchPrivateMessageBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ImapCanFetchPrivateMessageBody." If "tbl_Cos.ImapCanFetchPrivateMessageBody" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectoryStatus

Property Name	Value
Description:	A flag indicating whether subscribers can choose to be listed or not in the phone directory. The phone directory (directory assistance) is the audio listing that subscribers and unidentified callers use to reach subscribers and to leave messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ListInDirectoryStatus
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ListInDirectoryStatus." If "tbl_Cos.ListInDirectoryStatus" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS to which this COS belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.LocationObjectId." If "tbl_Cos.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxGreetingLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording their greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxGreetingLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxGreetingLength." If "tbl_Cos.MaxGreetingLength" can be NULL, then explicit NULL is allowed.
Default Value:	90
Direction:	In
Update Column Value From Parameter:	True

@MaxMembersPVL

Property Name	Value
Description:	The maximum number of members allowed in a personal voice mail list.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxMembersPVL
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxMembersPVL." If "tbl_Cos.MaxMembersPVL" can be NULL, then explicit NULL is allowed.
Default Value:	99

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording messages and conversations.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxMsgLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxMsgLength." If "tbl_Cos.MaxMsgLength" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MaxNameLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording their voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxNameLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxNameLength." If "tbl_Cos.MaxNameLength" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@MaxPrivateDlists

Property Name	Value
Description:	The maximum number of personal voice mail lists the subscriber is allowed to create.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxPrivateDlists
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxPrivateDlists." If "tbl_Cos.MaxPrivateDlists" can be NULL, then explicit NULL is allowed.
Default Value:	25
Direction:	In
Update Column Value From Parameter:	True

@MovetoDeleteFolder

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection moves deleted messages for the subscriber to a Deleted Items folder or physically deletes the message. True='deletion' moves messages to the DeletedItems folder, where it ages until it evaporates. False='deletion' physically deletes the message
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MovetoDeleteFolder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MovetoDeleteFolder." If "tbl_Cos.MovetoDeleteFolder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ObjectId." If "tbl_Cos.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@OutcallRestrictionObjectId

Property Name	Value
Description:	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in message delivery settings. The restriction table also restricts the subscriber extensions that Cisco Unity Connection dials when the phone is selected as the recording and playback device for the Media Master.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.OutcallRestrictionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.OutcallRestrictionObjectId." If "tbl_Cos.OutcallRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PersonalAdministrator

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows a subscriber to use the Cisco Unity Assistant to personalize their Cisco Unity Connection setting -- including their recorded greetings and message delivery options -- or to set up message notification devices and create private lists.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.PersonalAdministrator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.PersonalAdministrator." If "tbl_Cos.PersonalAdministrator" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	A flag indicating that this COS is read only. It cannot be modified from the SA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ReadOnly." If "tbl_Cos.ReadOnly" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequireSecureMessages

Property Name	Value
Description:	Specifies when to mark message secure
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.RequireSecureMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RequireSecureMessages
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.RequireSecureMessages." If "tbl_Cos.RequireSecureMessages" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMessage

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to send broadcast messages to all subscribers on the VMS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.SendBroadcastMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.SendBroadcastMessage." If "tbl_Cos.SendBroadcastMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UaAlternateExtensionAccess

Property Name	Value
Description:	The abilities a subscriber has to manage administrator-defined alternate extensions assigned to the subscriber. Determines whether subscribers can view the administrator-defined alternate extensions, and whether subscribers can manage (add, modify, and delete) their own set of alternate extensions in the Cisco Unity Assistant. If enabled, subscribers can define up to 5 alternate extensions in addition to the 9 alternate extensions that an administrator can define for them.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.UaAlternateExtensionAccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	UaAlternateExtension
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.UaAlternateExtensionAccess." If "tbl_Cos.UaAlternateExtensionAccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this COS can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.Undeletable." If "tbl_Cos.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UpdateBroadcastMessage

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Cos.UpdateBroadcastMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.UpdateBroadcastMessage." If "tbl_Cos.UpdateBroadcastMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WarnIntervalMsgEnd

Property Name	Value
Description:	The amount of time (in milliseconds) before the end of the maximum recording time when Cisco Unity Connection will play a warning tone or WAV file to indicate to the caller that they are almost out of recording time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.WarnIntervalMsgEnd
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.WarnIntervalMsgEnd." If "tbl_Cos.WarnIntervalMsgEnd" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WarnMinMsgLength

Property Name	Value
Description:	The minimum length (in milliseconds) that the maximum recording time has to be before the record termination warning feature is active. When the record termination feature is active, Cisco Unity Connection plays a warning tone indicating to the caller that they are almost out of recording time.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Cos.WarnMinMsgLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.WarnMinMsgLength." If "tbl_Cos.WarnMinMsgLength" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@XferRestrictionObjectId

Property Name	Value
Description:	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in call transfer settings.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.XferRestrictionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.XferRestrictionObjectId." If "tbl_Cos.XferRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.53. csp_CosDelete

Deletes a COS object from tbl_Cos as specified by the @ObjectId parameter.

Additional Information

If a replacement COS is specified (@ReplacementCosObjectId), all User and Agency objects assigned the deleted COS are updated with the replacement COS.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ReplacementCosObjectId	In	ignore	char (36 characters)	Specifies a COS to replace the deleted one with to prevent orphans.

Exceptions

csp_CosDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are three conditions that can cause an Object Not Found exception to be thrown: 1. The COS object specified by @ObjectId was not found. The names of the object (COS), table (tbl_Cos), and column (ObjectId) are included with the exception message. 2. The COS object specified by @ReplacementCosObjectId was not found. The names of the object (COS), table (tbl_Cos), and column (ObjectId) are included with the exception message. 3. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Cos), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Error #	Name	Description
1016	EXCEPTION_OBJECT_UNDELETABLE	This COS is required by the system and may not be deleted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ObjectId." If "tbl_Cos.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReplacementCosObjectId

Property Name	Value
Description:	Specifies a COS to replace the deleted one with to prevent orphans.
Notes:	If a replacement COS is specified (@ReplacementCosObjectId), all User and Agency objects assigned the deleted COS are updated with the replacement COS.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.54. csp_CosModify

Updates the attributes of a COS object based on the values passed in via the parameters. The @ObjectId parameter identifies the COS object that is updated.

Additional Information

A check is made of the read-only flag. If it is set, the procedure will not update the specified COS.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Optional	@AccessAdvancedUser Features	In	inherit	smallint (2 bytes)	A flag indicating whether or not the subscriber has access to advanced user features. Currently, there are two advanced user features: TTS and VUI.
Optional	@AccessCallRoutingRules	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can access personal call routing rules.
Optional	@AccessFaxMail	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS is allowed to manage their fax messages over the phone or from the Cisco Unity Connection Inbox.
Optional	@AccessIMAP	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can access VM via an IMAP client.
Optional	@AccessLiveReply	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can after listening to a message from another subscriber press 4-4, and Cisco Unity Connection will call the subscriber who left the message. Generally referred to as "Live Reply."
Optional	@AccessTts	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can have to their e-mail messages read to them by an e-mail reader over the phone.
Optional	@AccessUnifiedClient	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber can use the unified client.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AccessVmi	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can use the Cisco Unity Connection Inbox to listen to, compose, reply to, forward, and delete voice messages. If the subscriber has "AccessFaxMail" set, they can also use it to manage their faxes. This is a licensed feature.
Optional	@AccessVui	In	inherit	smallint (2 bytes)	A flag indicating whether a subscriber assigned this COS can use the voice driven inbox conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallHoldAvailable	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to change their own call holding options by using the Cisco Unity Connection Assistant. Call holding settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Optional	@CallScreenAvailable	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to change their own call screening options by using the Cisco Unity Assistant. Call screening settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Optional	@CanRecordName	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can record their own name.
Optional	@CanSendToPublicDI	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can send messages to system (formerly called "public") distribution lists.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this COS , e.g. "Default COS," "Basic Voice Mail." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EnableEnhancedSecurity	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber uses regular or enhanced phone security. Enhanced phone security adds RSA two-factor authentication to regular security.
Optional	@FaxRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier for the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in fax dialing settings.
Optional	@ImapCanFetchMessageBody	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can fetch the body of a non-private message using IMAP.
Optional	@ImapCanFetchPrivateMessageBody	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber can fetch the body of a private message using IMAP.
Optional	@ListInDirectoryStatus	In	inherit	smallint (2 bytes)	A flag indicating whether subscribers can choose to be listed or not in the phone directory. The phone directory (directory assistance) is the audio listing that subscribers and unidentified callers use to reach subscribers and to leave messages.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS to which this COS belongs.
Optional	@MaxGreetingLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording their greeting.
Optional	@MaxMembersPVL	In	inherit	int (4 bytes)	The maximum number of members allowed in a personal voice mail list.
Optional	@MaxMsgLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording messages and conversations.
Optional	@MaxNameLength	In	inherit	int (4 bytes)	The maximum recording length (in seconds) allowed to the subscriber for recording their voice name.
Optional	@MaxPrivateDlists	In	inherit	smallint (2 bytes)	The maximum number of personal voice mail lists the subscriber is allowed to create.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MovetoDeleteFolder	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection moves deleted messages for the subscriber to a Deleted Items folder or physically deletes the message. True='deletion' moves messages to the DeletedItems folder, where it ages until it evaporates. False='deletion' physically deletes the message
Optional	@NoLicenseCheck	In	explicit-withdefault	smallint (2 bytes)	Set to 1 (true) to skip license checks.
Optional	@OutcallRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in message delivery settings. The restriction table also restricts the subscriber extensions that Cisco Unity Connection dials when the phone is selected as the recording and playback device for the Media Master.
Optional	@PersonalAdministrator	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection allows a subscriber to use the Cisco Unity Assistant to personalize their Cisco Unity Connection setting -- including their recorded greetings and message delivery options -- or to set up message notification devices and create private lists.
Optional	@ReadOnly	In	inherit	smallint (2 bytes)	A flag indicating that this COS is read only. It cannot be modified from the SA.
Optional	@RequireSecureMessages	In	inherit	int (4 bytes)	Specifies when to mark message secure
Optional	@SendBroadcastMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to send broadcast messages to all subscribers on the VMS.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@UaAlternateExtension Access	In	inherit	smallint (2 bytes)	The abilities a subscriber has to manage administer-defined alternate extensions assigned to the subscriber. Determines whether subscribers can view the administrator-defined alternate extensions, and whether subscribers can manage (add, modify, and delete) their own set of alternate extensions in the Cisco Unity Assistant. If enabled, subscribers can define up to 5 alternate extensions in addition to the 9 alternate extensions that an administrator can define for them.
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this COS can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UpdateBroadcastMessage	In	inherit	smallint (2 bytes)	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Optional	@WarnIntervalMsgEnd	In	inherit	int (4 bytes)	The amount of time (in milliseconds) before the end of the maximum recording time when Cisco Unity Connection will play a warning tone or WAV file to indicate to the caller that they are almost out of recording time.
Optional	@WarnMinMsgLength	In	inherit	int (4 bytes)	The minimum length (in milliseconds) that the maximum recording time has to be before the record termination warning feature is active. When the record termination feature is active, Cisco Unity Connection plays a warning tone indicating to the caller that they are almost out of recording time.
Optional	@XferRestrictionObjectId	In	inherit	char (36 characters)	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in call transfer settings.

Exceptions

csp_CosModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified COS object was not found. The names of the object (COS), table (tbl_Cos), and column (ObjectId) are included with the exception message.
1015	EXCEPTION_OBJECT_READONLY	The COS as specified by @ObjectId cannot be updated because it's read-only attribute is set. The name of the object (COS) and table (tbl_Cos) are included with the message.
1026	EXCEPTION_LICENSE_VIOLATION_FEATURE	The number subscribers exceeds the allowed number for a licensed feature. The name of the feature is included with the exception.

Parameter Properties

@AccessAdvancedUserFeatures

Property Name	Value
Description:	A flag indicating whether or not the subscriber has access to advanced user features. Currently, there are two advanced user features: TTS and VUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessAdvancedUserFeatures
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessAdvancedUserFeatures." If "tbl_Cos.AccessAdvancedUserFeatures" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessCallRoutingRules

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can access personal call routing rules.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessCallRoutingRules
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessCallRoutingRules." If "tbl_Cos.AccessCallRoutingRules" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessFaxMail

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS is allowed to manage their fax messages over the phone or from the Cisco Unity Connection Inbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessFaxMail
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessFaxMail." If "tbl_Cos.AccessFaxMail" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessIMAP

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can access VM via an IMAP client.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessIMAP
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessIMAP." If "tbl_Cos.AccessIMAP" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessLiveReply

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can after listening to a message from another subscriber press 4-4, and Cisco Unity Connection will call the subscriber who left the message. Generally referred to as "Live Reply."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessLiveReply
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessLiveReply." If "tbl_Cos.AccessLiveReply" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessTts

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can have to their e-mail messages read to them by an e-mail reader over the phone.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Cos.AccessTts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessTts." If "tbl_Cos.AccessTts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessUnifiedClient

Property Name	Value
Description:	A flag indicating whether a subscriber can use the unified client.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessUnifiedClient
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessUnifiedClient." If "tbl_Cos.AccessUnifiedClient" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessVmi

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can use the Cisco Unity Connection Inbox to listen to, compose, reply to, forward, and delete voice messages. If the subscriber has "AccessFaxMail" set, they can also use it to manage their faxes. This is a licensed feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessVmi
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessVmi." If "tbl_Cos.AccessVmi" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AccessVui

Property Name	Value
Description:	A flag indicating whether a subscriber assigned this COS can use the voice driven inbox conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.AccessVui
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.AccessVui." If "tbl_Cos.AccessVui" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHoldAvailable

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to change their own call holding options by using the Cisco Unity Connection Assistant. Call holding settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CallHoldAvailable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CallHoldAvailable." If "tbl_Cos.CallHoldAvailable" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@CallScreenAvailable

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to change their own call screening options by using the Cisco Unity Assistant. Call screening settings apply when calls are transferred from the automated attendant or a directory handler to subscriber phones. They do not apply when an outsider caller or another subscriber dials a subscriber extension directly.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CallScreenAvailable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CallScreenAvailable." If "tbl_Cos.CallScreenAvailable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CanRecordName

Property Name	Value
Description:	A flag indicating whether the subscriber can record their own name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CanRecordName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CanRecordName." If "tbl_Cos.CanRecordName" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CanSendToPublicDI

Property Name	Value
Description:	A flag indicating whether the subscriber can send messages to system (formerly called "public") distribution lists.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.CanSendToPublicDI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.CanSendToPublicDI." If "tbl_Cos.CanSendToPublicDI" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this COS , e.g. "Default COS," "Basic Voice Mail." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.DisplayName." If "tbl_Cos.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnableEnhancedSecurity

Property Name	Value
Description:	A flag indicating whether the subscriber uses regular or enhanced phone security. Enhanced phone security adds RSA two-factor authentication to regular security.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.EnableEnhancedSecurity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.EnableEnhancedSecurity." If "tbl_Cos.EnableEnhancedSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@FaxRestrictionObjectId

Property Name	Value
Description:	The unique identifier for the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in fax dialing settings.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.FaxRestrictionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.FaxRestrictionObjectId." If "tbl_Cos.FaxRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ImapCanFetchMessageBody

Property Name	Value
Description:	A flag indicating whether the subscriber can fetch the body of a non-private message using IMAP.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ImapCanFetchMessageBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ImapCanFetchMessageBody." If "tbl_Cos.ImapCanFetchMessageBody" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ImapCanFetchPrivateMessageBody

Property Name	Value
Description:	A flag indicating whether the subscriber can fetch the body of a private message using IMAP.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ImapCanFetchPrivateMessageBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ImapCanFetchPrivateMessageBody." If "tbl_Cos.ImapCanFetchPrivateMessageBody" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ListInDirectoryStatus

Property Name	Value
Description:	A flag indicating whether subscribers can choose to be listed or not in the phone directory. The phone directory (directory assistance) is the audio listing that subscribers and unidentified callers use to reach subscribers and to leave messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ListInDirectoryStatus
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ListInDirectoryStatus." If "tbl_Cos.ListInDirectoryStatus" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS to which this COS belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.LocationObjectId." If "tbl_Cos.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxGreetingLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording their greeting.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxGreetingLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxGreetingLength." If "tbl_Cos.MaxGreetingLength" can be NULL, then explicit NULL is allowed.
Default Value:	90
Direction:	In
Update Column Value From Parameter:	True

@MaxMembersPVL

Property Name	Value
Description:	The maximum number of members allowed in a personal voice mail list.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxMembersPVL
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxMembersPVL." If "tbl_Cos.MaxMembersPVL" can be NULL, then explicit NULL is allowed.
Default Value:	99
Direction:	In
Update Column Value From Parameter:	True

@MaxMsgLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording messages and conversations.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxMsgLength

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxMsgLength." If "tbl_Cos.MaxMsgLength" can be NULL, then explicit NULL is allowed.
Default Value:	300
Direction:	In
Update Column Value From Parameter:	True

@MaxNameLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed to the subscriber for recording their voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxNameLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxNameLength." If "tbl_Cos.MaxNameLength" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@MaxPrivateDlists

Property Name	Value
Description:	The maximum number of personal voice mail lists the subscriber is allowed to create.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MaxPrivateDlists
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MaxPrivateDlists." If "tbl_Cos.MaxPrivateDlists" can be NULL, then explicit NULL is allowed.
Default Value:	25
Direction:	In
Update Column Value From Parameter:	True

@MovetoDeleteFolder

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection moves deleted messages for the subscriber to a Deleted Items folder or physically deletes the message. True='deletion' moves messages to the DeletedItems folder, where it ages until it evaporates. False='deletion' physically deletes the message
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.MovetoDeleteFolder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.MovetoDeleteFolder." If "tbl_Cos.MovetoDeleteFolder" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Set to 1 (true) to skip license checks.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a COS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ObjectId." If "tbl_Cos.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@OutcallRestrictionObjectId

Property Name	Value
Description:	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in message delivery settings. The restriction table also restricts the subscriber extensions that Cisco Unity Connection dials when the phone is selected as the recording and playback device for the Media Master.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.OutcallRestrictionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.OutcallRestrictionObjectId." If "tbl_Cos.OutcallRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PersonalAdministrator

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection allows a subscriber to use the Cisco Unity Assistant to personalize their Cisco Unity Connection setting -- including their recorded greetings and message delivery options -- or to set up message notification devices and create private lists.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.PersonalAdministrator
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.PersonalAdministrator." If "tbl_Cos.PersonalAdministrator" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ReadOnly

Property Name	Value
Description:	A flag indicating that this COS is read only. It cannot be modified from the SA.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.ReadOnly
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.ReadOnly." If "tbl_Cos.ReadOnly" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RequireSecureMessages

Property Name	Value
Description:	Specifies when to mark message secure
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.RequireSecureMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RequireSecureMessages
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.RequireSecureMessages." If "tbl_Cos.RequireSecureMessages" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@SendBroadcastMessage

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to send broadcast messages to all subscribers on the VMS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.SendBroadcastMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.SendBroadcastMessage." If "tbl_Cos.SendBroadcastMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UaAlternateExtensionAccess

Property Name	Value
Description:	The abilities a subscriber has to manage administer-defined alternate extensions assigned to the subscriber. Determines whether subscribers can view the administrator-defined alternate extensions, and whether subscribers can manage (add, modify, and delete) their own set of alternate extensions in the Cisco Unity Assistant. If enabled, subscribers can define up to 5 alternate extensions in addition to the 9 alternate extensions that an administrator can define for them.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.UaAlternateExtensionAccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	UaAlternateExtension
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.UaAlternateExtensionAccess." If "tbl_Cos.UaAlternateExtensionAccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this COS can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.Undeletable." If "tbl_Cos.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UpdateBroadcastMessage

Property Name	Value
Description:	A flag indicating whether the subscriber has the ability to update broadcast messages that are active or will be active in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.UpdateBroadcastMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.UpdateBroadcastMessage." If "tbl_Cos.UpdateBroadcastMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WarnIntervalMsgEnd

Property Name	Value
Description:	The amount of time (in milliseconds) before the end of the maximum recording time when Cisco Unity Connection will play a warning tone or WAV file to indicate to the caller that they are almost out of recording time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.WarnIntervalMsgEnd
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.WarnIntervalMsgEnd." If "tbl_Cos.WarnIntervalMsgEnd" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WarnMinMsgLength

Property Name	Value
Description:	The minimum length (in milliseconds) that the maximum recording time has to be before the record termination warning feature is active. When the record termination feature is active, Cisco Unity Connection plays a warning tone indicating to the caller that they are almost out of recording time.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.WarnMinMsgLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.WarnMinMsgLength." If "tbl_Cos.WarnMinMsgLength" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@XferRestrictionObjectId

Property Name	Value
Description:	The unique identifier of the RestrictionTable object that Cisco Unity Connection uses to limit phone numbers that the subscriber can enter in call transfer settings.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Cos.XferRestrictionObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Cos.XferRestrictionObjectId." If "tbl_Cos.XferRestrictionObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.55. csp_CredentialCreate

Creates new Credential object for a user by inserting a new row into tbl_Credential. When a new credential is created, this procedure will also create a new UserCredentialHistory object for the respective user by inserting a new row in tbl_UserCredentialHistory for the respective user. This is done by executing csp_private_UserCredentialHistoryCreate.

To change the properties of a user's credential, see csp_CredentialModify.

Additional Information

The parameters @UserObjectid, @CredentialType, @CredentialPolicyObjectid and the @Credentials must be provided.

Normally a client passes in the credentials in binary. However, if necessary, a client can pass in the credentials as a string using the @strCredentials parameter. The text will be converted to binary and override the @Credentials parameter.

The credentials are stored using a SHA1 hash with salt. Although not recommended, a user can be created with a blank password. As the user must have a record in tbl_Credential to be authenticated, in the case of a blank password, the client should pass in a binary Unicode representation of an empty string (0x0000) via @Credentials or an empty string via @strCredentials.

When a credential is created, this procedure will automatically add a new row to tbl_UserCredentialHistory for the respective user. This is done by executing csp_private_UserCredentialHistoryCreate. One exception is if the credential is blank (i.e., blank password). In the case of a blank credential, the user's credential history is not updated.

Business Rules

Users with administrative privileges MUST have a non-blank credential. Reference Security FRD SFS-002JC.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialPolicyObjectid	In	inherit	char (36 characters)	The unique identifier of the CredentialPolicy object that is associated with this credential.
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectid	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set this credential.
Optional	@Credentials	In	explicit-with-default	varchar (254 characters)	The PIN or password, for a user. The credentials are stored in an encrypted format.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CredMustChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user must change their credentials (PIN or password) at the next login.
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).
Optional	@EncryptionType	In	inherit	int (4 bytes)	Type of encryption that was used to generate the credentials.
Optional	@HackCount	In	ignore	int (4 bytes)	This parameter is a stub until the admin team stops using it. It does nothing.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this credential is mapped to the user NT/AD domain account and as such is designated as the 'primary' credential for the user. This column is not currently used, but is retained from Unity 4.x in case it is needed in the future.
Optional	@Locked	In	ignore	smallint (2 bytes)	Emulates a Boolean data type, which can have one of two values. Either 1 for true, or 0 for false.
Optional	@strCredentials	In	explicit	nvarchar (128 characters)	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Optional	@TimeChanged	In	ignore	datetime (8 bytes)	This parameter is a stub until the admin team stops using it. It does nothing.
Optional	@TimeLastHack	In	ignore	datetime (4 bytes)	This parameter is a stub until the admin team stops using it. It does nothing.
Optional	@TimeLockout	In	ignore	datetime (8 bytes)	This parameter is a stub until the admin team stops using it. It does nothing.

Exceptions

csp_CredentialCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId, @CredentialType, @Credentials, and @CredentialPolicyObjectId) is NULL. The name of the missing parameter is included with the exception message.
1003	EXCEPTION_PARAMETER_INVALID	Either @Credentials or @strCredentials need to be passed-in.
1119	EXCEPTION_CREDENTIAL_HISTORY_MATCH	The credential specified in @Credentials for the credential type specified by in @CredentialType matches a previous credential for the user specified by @UserObjectId. Based on the credential policy specified by @CredentialPolicyObject, this credential may not be reused.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set this credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CantChange." If "tbl_Credential.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CredentialPolicyObjectId

Property Name	Value
Description:	The unique identifier of the CredentialPolicy object that is associated with this credential.
Notes:	This parameter must be provided. Otherwise, a new Credential is not created.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialPolicyObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialPolicyObjectId." If "tbl_Credential.CredentialPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Credentials

Property Name	Value
Description:	The PIN or password, for a user. The credentials are stored in an encrypted format.
Notes:	This parameter must be provided. Otherwise, a new Credential is not created.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0xFABBADABBA."
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	This parameter must be provided. Otherwise, a new Credential is not created.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@CredMustChange

Property Name	Value
Description:	A flag indicating whether the user must change their credentials (PIN or password) at the next login.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredMustChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredMustChange." If "tbl_Credential.CredMustChange" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.DoesntExpire." If "tbl_Credential.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptionType

Property Name	Value
Description:	Type of encryption that was used to generate the credentials.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.EncryptionType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	EncryptionType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.EncryptionType." If "tbl_Credential.EncryptionType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@HackCount

Property Name	Value
Description:	This parameter is a stub until the admin team stops using it. It does nothing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this credential is mapped to the user NT/AD domain account and as such is designated as the 'primary' credential for the user. This column is not currently used, but is retained from Unity 4.x in case it is needed in the future.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.IsPrimary." If "tbl_Credential.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Locked

Property Name	Value
Description:	Emulates a Boolean data type, which can have one of two values. Either 1 for true, or 0 for false.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@strCredentials

Property Name	Value
Description:	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Notes:	This parameter is here as a convenience for clients that prefer to avoid varbinary types when using string-based credentials.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	CredentialsString
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeChanged

Property Name	Value
Description:	This parameter is a stub until the admin team stops using it. It does nothing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeLastHack

Property Name	Value
Description:	This parameter is a stub until the admin team stops using it. It does nothing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeLockout

Property Name	Value
Description:	This parameter is a stub until the admin team stops using it. It does nothing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	This parameter must be provided. Otherwise, a new Credential is not created.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserId." If "tbl_Credential.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.56. csp_CredentialDelete

Deletes a user's Credential object from tbl_Credential as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CredentialDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The Credential object for the specified User and CredentialType was not found. The names of the object (Credential), table (tbl_Credential), and columns (UserObjectId and CredentialType) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Credential), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	This parameter must be provided. Otherwise, the Credential is not deleted.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	This parameter must be provided. Otherwise, the Credential is not deleted.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserObjectId." If "tbl_Credential.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.57. csp_CredentialHistoryClear

Clears the credential history for a user.

Additional Information

The parameters @CredentialType and @UserObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential (PIN, password) for which the history is cleared.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the user whose credential history is cleared.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CredentialHistoryClear will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CredentialType and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CredentialType

Property Name	Value
Description:	The type of credential (PIN, password) for which the history is cleared.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_UserCredentialHistory.CredentialType
Required/Optional Parameter:	Required

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_UserCredentialHistory.CredentialType." If "tbl_UserCredentialHistory.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the user whose credential history is cleared.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_User.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_User.ObjectId." If "tbl_User.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.58. csp_CredentialModify

Updates the attributes of a Credential object based on the values passed in via the parameters. The @CredentialType and @UserObjectId parameters identify the Credential object that is updated.

Additional Information

Normally a client passes in the credentials in binary. However, if necessary, a client can pass in the credentials as a string using the @strCredentials parameter. The text will be converted to binary and override the @Credentials parameter.

This stored procedure will check the credential for compliance with trivial password rules by calling csp_CredentialValidate. See csp_CredentialValidate for more information on trivial password checks. If the credential fails one of the criteria for trivial password rules, an exception is thrown with information about the criteria that was not met.

The credentials are stored using a SHA1 hash with salt. Although not recommended, a user can be created with a blank password. As the user must have a record in tbl_Credential to be authenticated, in the case of a blank password, the client should pass in a binary Unicode representation of an empty string (0x0000) via @Credentials or an empty string via @strCredentials.

The credential type cannot be modified via this stored procedure.

When a credential is modified, this procedure will automatically add a new row to tbl_UserCredentialHistory for the respective user. This is done by executing csp_private_UserCredentialHistoryCreate. One exception is if the credential is blank (i.e., blank password). In the case of a blank credential, the user's credential history is not updated.

Business Rules

Users with administrative privileges MUST have a non-blank credential. Reference Security FRD SFS-002JC.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CantChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user can set this credential.
Optional	@CredentialPolicyObjectId	In	inherit	char (36 characters)	The unique identifier of the CredentialPolicy object that is associated with this credential.
Optional	@Credentials	In	inherit	varchar (254 characters)	The PIN or password, for a user. The credentials are stored in an encrypted format.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CredMustChange	In	inherit	smallint (2 bytes)	A flag indicating whether the user must change their credentials (PIN or password) at the next login.
Optional	@DoesntExpire	In	inherit	smallint (2 bytes)	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).
Optional	@EncryptedCredentials	In	ignore	varchar (254 characters)	For passing in the credentials encrypted.
Optional	@EncryptionType	In	inherit	int (4 bytes)	Type of encryption that was used to generate the credentials.
Optional	@HackCount	In	inherit	int (4 bytes)	The number of logons attempted that failed due to invalid credentials. The Unity system or external authentication provider determined that the credentials supplied as part of a user logon attempt were invalid.
Optional	@Hacked	In	ignore	smallint (2 bytes)	Used to lockout a credential due to too many hacks.
Optional	@HashedCredential	In	ignore	varchar (254 characters)	If EncryptedCredential is in a reversible format, HashedCredential can be used for checking and setting history entries.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this credential is mapped to the user NT/AD domain account and as such is designated as the 'primary' credential for the user. This column is not currently used, but is retained from Unity 4.x in case it is needed in the future.
Optional	@Locked	In	ignore	smallint (2 bytes)	Used to administratively lock or unlock the credential.
Optional	@strCredentials	In	explicit	nvarchar (128 characters)	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Optional	@TimeChanged	In	ignore	datetime (8 bytes)	This parameter is a stub until the admin team stops using it. It does nothing.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TimeHacked	In	inherit	datetime (8 bytes)	The date and time that the credential was locked due to too many hacks. The date and time is recorded in this column whenever a user credential is locked due to too many hacks based on the credential policy.
Optional	@TimeLastHack	In	inherit	datetime (4 bytes)	The date and time of the last logon attempt with an invalid user credential.
Optional	@TimeLockout	In	inherit	datetime (8 bytes)	The date and time that the credential was locked by an administrator.

Exceptions

csp_CredentialModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.
1003	EXCEPTION_PARAMETER_INVALID	Either @Credentials or @strCredentials need to be passed-in.
1004	EXCEPTION_OBJECT_NOTFOUND	The Credential object for the specified User and CredentialType was not found. The names of the object (Credential), table (tbl_Credential), and columns (UserObjectId and CredentialType) are included with the exception message.
1027	EXCEPTION_CREDENTIAL_NUMERIC_CHECK_FAILED	The credential contained character other than digits. TUI credentials must contain only digits.
1030	EXCEPTION_NOT_AUTHORIZED	Returned if an attempt is made by a user to change the credentials for an admin without having the privilege required to change an admin password.
1119	EXCEPTION_CREDENTIAL_HISTORY_MATCH	The credential specified in @Credentials or @strCredentials for the credential type specified in @CredentialType matches a previous credential for the user specified by @UserObjectId. Based on the credential policy specified by @CredentialPolicyObject, this credential may not be reused.
1121	EXCEPTION_CREDENTIAL_MINLENGTH_CHECK_FAILED	The credential minimum length check failed.
1122	EXCEPTION_CREDENTIAL_REQUIRED_CHARACTER_S_CHECK_FAILED	The credential does not contain three of the four required character group types.
1123	EXCEPTION_CREDENTIAL_THREE_CONSECUTIVE_CHARACTERS_CHECK_FAILED	The credential consists of the same character repeated more than 3 times consecutively. For example, 2222.

Error #	Name	Description
1124	EXCEPTION_CREDENTIAL_ALIAS_CHECK_FAILED	The credential repeats or includes the user alias.
1125	EXCEPTION_CREDENTIAL_EXTENSION_CHECK_FAILED	The credential repeats or includes the user dtmfaccessid.
1126	EXCEPTION_CREDENTIAL_ASCENDING_CHARACTERS_CHECK_FAILED	The credential consists of ascending consecutive characters. For example, ABCDE.
1127	EXCEPTION_CREDENTIAL_DESCENDING_CHARACTERS_CHECK_FAILED	The credential consists of descending consecutive characters. For example, FEDCBA.
1130	EXCEPTION_CREDENTIAL_TWO_CONSECUTIVE_CHARACTERS_CHECK_FAILED	The credential consists of the same character repeated more than 2 times consecutively. For example, 222.
1131	EXCEPTION_CREDENTIAL_THREE_UNIQUE_DIGITS_CHECK_FAILED	The credential does not contain at least three unique digits.
1132	EXCEPTION_CREDENTIAL_FIRSTNAME_CHECK_FAILED	The credential is the same as the numeric representation of the user's first name.
1133	EXCEPTION_CREDENTIAL_LASTNAME_CHECK_FAILED	The credential is the same as the numeric representation of the user's last name.
1134	EXCEPTION_CREDENTIAL_DIGITGROUPS_CHECK_FAILED	The credential consists of groups of repeated digits.
1135	EXCEPTION_CREDENTIAL_KEYPAD_CHECK_FAILED	The credential consists of patterns that are dialed in a straight line on a keypad.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CantChange

Property Name	Value
Description:	A flag indicating whether the user can set this credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CantChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CantChange." If "tbl_Credential.CantChange" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@CredentialPolicyObjectId

Property Name	Value
Description:	The unique identifier of the CredentialPolicy object that is associated with this credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialPolicyObjectId." If "tbl_Credential.CredentialPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Credentials

Property Name	Value
Description:	The PIN or password, for a user. The credentials are stored in an encrypted format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.Credentials." If "tbl_Credential.Credentials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	This parameter must be provided. Otherwise, the Credential is not modified. The CredentialType cannot be modified.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	False

@CredMustChange

Property Name	Value
Description:	A flag indicating whether the user must change their credentials (PIN or password) at the next login.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredMustChange
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredMustChange." If "tbl_Credential.CredMustChange" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DoesntExpire

Property Name	Value
Description:	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.DoesntExpire
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.DoesntExpire." If "tbl_Credential.DoesntExpire" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EncryptedCredentials

Property Name	Value
Description:	For passing in the credentials encrypted.
Notes:	This is mainly for importing users from Unity so we can bring over their password as a one way hash value.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

@EncryptionType

Property Name	Value
Description:	Type of encryption that was used to generate the credentials.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.EncryptionType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	EncryptionType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.EncryptionType." If "tbl_Credential.EncryptionType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@HackCount

Property Name	Value
Description:	The number of logons attempted that failed due to invalid credentials. The Unity system or external authentication provider determined that the credentials supplied as part of a user logon attempt were invalid.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.HackCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.HackCount." If "tbl_Credential.HackCount" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Hacked

Property Name	Value
Description:	Used to lockout a credential due to too many hacks.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@HashedCredential

Property Name	Value
Description:	If EncryptedCredential is in a reversible format, HashedCredential can be used for checking and setting history entries.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this credential is mapped to the user NT/AD domain account and as such is designated as the 'primary' credential for the user. This column is not currently used, but is retained from Unity 4.x in case it is needed in the future.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.IsPrimary
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.IsPrimary." If "tbl_Credential.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Locked

Property Name	Value
Description:	Used to administratively lock or unlock the credential.
Notes:	
Business Rules:	Setting this to 0, will unlock the administrative lockout. It will also unlock a hack related lockout.
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@strCredentials

Property Name	Value
Description:	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Notes:	This parameter is here as a convenience for clients that prefer to avoid varbinary types when using string-based credentials.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	CredentialsString

Property Name	Value
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeChanged

Property Name	Value
Description:	This parameter is a stub until the admin team stops using it. It does nothing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TimeHacked

Property Name	Value
Description:	The date and time that the credential was locked due to too many hacks. The date and time is recorded in this column whenever a user credential is locked due to too many hacks based on the credential policy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.TimeHacked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.TimeHacked." If "tbl_Credential.TimeHacked" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@TimeLastHack

Property Name	Value
Description:	The date and time of the last logon attempt with an invalid user credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.TimeLastHack
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.TimeLastHack." If "tbl_Credential.TimeLastHack" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeLockout

Property Name	Value
Description:	The date and time that the credential was locked by an administrator.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.TimeLockout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.TimeLockout." If "tbl_Credential.TimeLockout" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	This parameter must be provided. Otherwise, the Credential is not modified.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserObjectId." If "tbl_Credential.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.59. csp_CredentialModifyUser

Updates the Credentials of a Credential object based on the values passed in via the parameters. The @CredentialType and @UserObjectId parameters identify the Credential object that is updated.

Additional Information

This procedure is meant to be called by tools such as the PCA that allow users to modify their credentials.

If neither @Credential nor @strCredential is passed in, an error is NOT returned because apparently the CDL calls this proc quite often without a credential.

Business Rules

If the credential is successfully updated, CredMustChange is set to 0.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Credentials	In	inherit	varchar (254 characters)	The PIN or password, for a user. The credentials are stored in an encrypted format.
Optional	@strCredentials	In	explicit	nvarchar (128 characters)	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.

Exceptions

csp_CredentialModifyUser will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Credentials

Property Name	Value
Description:	The PIN or password, for a user. The credentials are stored in an encrypted format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.Credentials." If "tbl_Credential.Credentials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@strCredentials

Property Name	Value
Description:	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Notes:	This parameter is here as a convenience for clients that prefer to avoid varbinary types when using string-based credentials.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	CredentialsString
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserId." If "tbl_Credential.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.60. csp_CredentialPolicyCreate

Creates a new CredentialPolicy object by inserting a new row into tbl_CredentialPolicy. A CredentialPolicy object consists of system-wide credential restriction settings for a specific credentials type and a lockout policy that applies when users access Cisco Unity Connection.

Additional Information

The parameter @DisplayName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name (e.g., "Administrator Password Policy") of the credential policy to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ExpiryWarningDays	In	inherit	int (4 bytes)	The number of days prior to the expiration of a credential when Cisco Unity Connection begins prompting a user to change their credential upon logon, until the change is made.
Optional	@HackResetTime	In	inherit	smallint (2 bytes)	The length of time (in minutes) after which if no failed logon attempts occur, the count of failed logon attempts is cleared.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this credential policy belongs.
Optional	@LockoutDuration	In	inherit	smallint (2 bytes)	The length of time (in minutes) that a user who is locked out must wait until they can attempt to access the system again with this credential.
Optional	@MaxDays	In	inherit	smallint (2 bytes)	The maximum number of days before the credential must be changed.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MaxHacks	In	inherit	smallint (2 bytes)	The maximum number of failed logon attempts (hacks) before action is taken.
Optional	@MinDuration	In	inherit	int (4 bytes)	The minimum number of minutes that must pass from the time of the last change before the credential can be changed.
Optional	@MinLength	In	inherit	smallint (2 bytes)	The minimum number of characters or digits (PIN) required for the credential.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.
Optional	@PrevCredCount	In	inherit	smallint (2 bytes)	The number of credentials to store.
Optional	@TrivialCredChecking	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should check against trivial credentials for extra security.

Exceptions

csp_CredentialPolicyCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The primary LocationVMS object was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. 2. A valid location object is not found. The names of the missing object (Location), table (tbl_Location), and the column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name (e.g., "Administrator Password Policy") of the credential policy to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	This parameter must be provided. Otherwise, a new CredentialPolicy is not created.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.DisplayName." If "tbl_CredentialPolicy.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ExpiryWarningDays

Property Name	Value
Description:	The number of days prior to the expiration of a credential when Cisco Unity Connection begins prompting a user to change their credential upon logon, until the change is made.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.ExpiryWarningDays
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.ExpiryWarningDays." If "tbl_CredentialPolicy.ExpiryWarningDays" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@HackResetTime

Property Name	Value
Description:	The length of time (in minutes) after which if no failed logon attempts occur, the count of failed logon attempts is cleared.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.HackResetTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.HackResetTime." If "tbl_CredentialPolicy.HackResetTime" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this credential policy belongs.
Notes:	If @LocationObjectId is not passed in or contains NULL, the location will be set to the default location (LocationVMS object with IsPrimary=1). Otherwise the LocationObjectId is set to the value contained in @LocationObjectId.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.LocationObjectId." If "tbl_CredentialPolicy.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LockoutDuration

Property Name	Value
Description:	The length of time (in minutes) that a user who is locked out must wait until they can attempt to access the system again with this credential.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.LockoutDuration
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.LockoutDuration." If "tbl_CredentialPolicy.LockoutDuration" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@MaxDays

Property Name	Value
Description:	The maximum number of days before the credential must be changed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MaxDays
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MaxDays." If "tbl_CredentialPolicy.MaxDays" can be NULL, then explicit NULL is allowed.
Default Value:	180
Direction:	In
Update Column Value From Parameter:	True

@MaxHacks

Property Name	Value
Description:	The maximum number of failed logon attempts (hacks) before action is taken.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MaxHacks
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MaxHacks." If "tbl_CredentialPolicy.MaxHacks" can be NULL, then explicit NULL is allowed.
Default Value:	3
Direction:	In
Update Column Value From Parameter:	True

@MinDuration

Property Name	Value
Description:	The minimum number of minutes that must pass from the time of the last change before the credential can be changed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MinDuration
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MinDuration." If "tbl_CredentialPolicy.MinDuration" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MinLength

Property Name	Value
Description:	The minimum number of characters or digits (PIN) required for the credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MinLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MinLength." If "tbl_CredentialPolicy.MinLength" can be NULL, then explicit NULL is allowed.
Default Value:	8
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.ObjectId." If "tbl_CredentialPolicy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PrevCredCount

Property Name	Value
Description:	The number of credentials to store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.PrevCredCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.PrevCredCount." If "tbl_CredentialPolicy.PrevCredCount" can be NULL, then explicit NULL is allowed.
Default Value:	12

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@TrivialCredChecking

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should check against trivial credentials for extra security.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.TrivialCredChecking
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.TrivialCredChecking." If "tbl_CredentialPolicy.TrivialCredChecking" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.61. csp_CredentialPolicyDelete

Deletes a CredentialPolicy object from tbl_CredentialPolicy as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CredentialPolicyDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified CredentialPolicy object was not found. The names of the object (CredentialPolicy), table (tbl_CredentialPolicy), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_CredentialPolicy), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.ObjectId." If "tbl_CredentialPolicy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.62. csp_CredentialPolicyModify

Updates the attributes of a CredentialPolicy object based on the values passed in via the parameters. The @ObjectId parameter identifies the CredentialPolicy object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name (e.g., "Administrator Password Policy") of the credential policy to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@ExpiryWarningDays	In	inherit	int (4 bytes)	The number of days prior to the expiration of a credential when Cisco Unity Connection begins prompting a user to change their credential upon logon, until the change is made.
Optional	@HackResetTime	In	inherit	smallint (2 bytes)	The length of time (in minutes) after which if no failed logon attempts occur, the count of failed logon attempts is cleared.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this credential policy belongs.
Optional	@LockoutDuration	In	inherit	smallint (2 bytes)	The length of time (in minutes) that a user who is locked out must wait until they can attempt to access the system again with this credential.
Optional	@MaxDays	In	inherit	smallint (2 bytes)	The maximum number of days before the credential must be changed.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MaxHacks	In	inherit	smallint (2 bytes)	The maximum number of failed logon attempts (hacks) before action is taken.
Optional	@MinDuration	In	inherit	int (4 bytes)	The minimum number of minutes that must pass from the time of the last change before the credential can be changed.
Optional	@MinLength	In	inherit	smallint (2 bytes)	The minimum number of characters or digits (PIN) required for the credential.
Optional	@PrevCredCount	In	inherit	smallint (2 bytes)	The number of credentials to store.
Optional	@TrivialCredChecking	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should check against trivial credentials for extra security.

Exceptions

csp_CredentialPolicyModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified CredentialPolicy object was not found. The names of the object (CredentialPolicy), table (tbl_CredentialPolicy), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name (e.g., "Administrator Password Policy") of the credential policy to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.DisplayName." If "tbl_CredentialPolicy.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ExpiryWarningDays

Property Name	Value
Description:	The number of days prior to the expiration of a credential when Cisco Unity Connection begins prompting a user to change their credential upon logon, until the change is made.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.ExpiryWarningDays
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.ExpiryWarningDays." If "tbl_CredentialPolicy.ExpiryWarningDays" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@HackResetTime

Property Name	Value
Description:	The length of time (in minutes) after which if no failed logon attempts occur, the count of failed logon attempts is cleared.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.HackResetTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.HackResetTime." If "tbl_CredentialPolicy.HackResetTime" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this credential policy belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.LocationObjectId." If "tbl_CredentialPolicy.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LockoutDuration

Property Name	Value
Description:	The length of time (in minutes) that a user who is locked out must wait until they can attempt to access the system again with this credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.LockoutDuration
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.LockoutDuration." If "tbl_CredentialPolicy.LockoutDuration" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@MaxDays

Property Name	Value
Description:	The maximum number of days before the credential must be changed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MaxDays
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MaxDays." If "tbl_CredentialPolicy.MaxDays" can be NULL, then explicit NULL is allowed.
Default Value:	180
Direction:	In
Update Column Value From Parameter:	True

@MaxHacks

Property Name	Value
Description:	The maximum number of failed logon attempts (hacks) before action is taken.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MaxHacks
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MaxHacks." If "tbl_CredentialPolicy.MaxHacks" can be NULL, then explicit NULL is allowed.
Default Value:	3

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MinDuration

Property Name	Value
Description:	The minimum number of minutes that must pass from the time of the last change before the credential can be changed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MinDuration
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MinDuration." If "tbl_CredentialPolicy.MinDuration" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MinLength

Property Name	Value
Description:	The minimum number of characters or digits (PIN) required for the credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.MinLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.MinLength." If "tbl_CredentialPolicy.MinLength" can be NULL, then explicit NULL is allowed.
Default Value:	8
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a CredentialPolicy object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.ObjectId." If "tbl_CredentialPolicy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@PrevCredCount

Property Name	Value
Description:	The number of credentials to store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.PrevCredCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.PrevCredCount." If "tbl_CredentialPolicy.PrevCredCount" can be NULL, then explicit NULL is allowed.
Default Value:	12
Direction:	In
Update Column Value From Parameter:	True

@TrivialCredChecking

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should check against trivial credentials for extra security.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CredentialPolicy.TrivialCredChecking
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_CredentialPolicy.TrivialCredChecking." If "tbl_CredentialPolicy.TrivialCredChecking" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.63. csp_CredentialUserCanModifyCheck

Determines whether a user can modify his/her credential.

Additional Information

The parameters @CredentialType and @UserObjectId must be provided.

If the credential cannot be changed because the CantChange attribute is true, this procedure throws the exception CREDENTIAL_CANTCHANGE.

If the credential cannot be changed because the minimum duration between credential changes as specified by MinDuration has not yet elapsed, this procedure throws the exception CREDENTIAL_MINDURATION_NOT_ELAPSED.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_CredentialUserCanModifyCheck will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Credential object was not found. The names of the object (Credential), table (tbl_Credential), and columns (UserObjectId and CredentialType) are included with the exception message.
1138	EXCEPTION_CREDENTIAL_CANTCHANGE	The user cannot change the credential because the attribute CantChange is true.

Error #	Name	Description
1139	EXCEPTION_CREDENTIAL_MINIDURATION_NOT_ELAPSED	The user cannot change the credential because the minimum duration between credential changes has not elapsed.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserId." If "tbl_Credential.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.64. csp_CredentialUserMustModifyCheck

Determines whether or not a user must modify his/her credential.

Additional Information

The parameters @CredentialType and @UserObjectId must be provided.

If the credential has expired or CredMustChange is set, a value greater than 0 is returned in @Result. The credential will not expire if either DoesntExpire is 1 or MaxDays in the credential policy is 0.

If the credential policy indicates that the credential will never expire or the credential cannot expire due to Doesntexpire=1, @ExpirationDays is set to 999. Ideally this would get set to -1, but that would require changes to clients.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ExpirationDays	Out	ignore	int (4 bytes)	Indicates the number of days after which the credential will expire.
Optional	@Result	Out	ignore	int (4 bytes)	Indicated whether or not the credential needs to change.

Exceptions

csp_CredentialUserMustModifyCheck will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Credential object was not found. The names of the object (Credential), table (tbl_Credential), and columns (UserObjectId and CredentialType) are included with the exception message.
1137	EXCEPTION_AUTHENTICATION_CREDENTIAL_EXPIRED	The user was authenticated, but the credential has expired and must be changed.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@ExpirationDays

Property Name	Value
Description:	Indicates the number of days after which the credential will expire.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Result

Property Name	Value
Description:	Indicated whether or not the credential needs to change.
Notes:	
Business Rules:	A non-zero value indicates that the credential needs to change.
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserId." If "tbl_Credential.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.65. csp_CredentialValidate

Performs credential validation so that a client may test to see if a credential is valid before attempting to set it.

Additional Information

This stored procedure performs checks to ensure that the credentials meet the criteria defined by the CredentialPolicy assigned to this user. This procedure performs the following checks on the credentials:

- * The minimum length of the credential
- * The history for a duplicate
- * Trivial credential - password/PIN complexity (e.g., the credential does not repeat any character more than twice, a PIN shall not contain the user's DtmfAccessId, etc.)

If the credential fails one of the criteria for trivial password rules, an exception is thrown with information about the criteria that was not met.

If the credential length is zero, no validation is performed.

Auditing is turned off for this stored procedure.

Business Rules

Raise an exception if the validation fails.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CredentialPolicyObjectId	In	inherit	char (36 characters)	The unique identifier of the CredentialPolicy object that is associated with this credential.
Required	@CredentialType	In	inherit	int (4 bytes)	The type of credential such as password, PIN, Windows or Domino credential.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User object to which this credential belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Credentials	In	inherit	varchar (254 characters)	The PIN or password, for a user. The credentials are stored in an encrypted format.
Optional	@strCredentials	In	explicit	nvarchar (128 characters)	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.

Exceptions

csp_CredentialValidate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@UserObjectId and @CredentialType) is NULL. The name of the missing parameter is included with the exception message.
1003	EXCEPTION_PARAMETER_INVALID	Either @Credentials or @strCredentials need to be passed-in.
1027	EXCEPTION_CREDENTIAL_NUMERIC_CHECK_FAILED	The credential contained character other than digits. TUI credentials must contain only digits.
1119	EXCEPTION_CREDENTIAL_HISTORY_MATCH	The credential specified in @Credentials or @strCredentials for the credential type specified in @CredentialType matches a previous credential for the user specified by @UserObjectId. Based on the credential policy specified by @CredentialPolicyObject, this credential may not be reused.
1121	EXCEPTION_CREDENTIAL_MINLENGTH_CHECK_FAILED	The credential minimum length check failed.
1122	EXCEPTION_CREDENTIAL_REQUIRED_CHARACTER_S_CHECK_FAILED	The credential does not contain three of the four required character group types.
1123	EXCEPTION_CREDENTIAL_THREE_CONSECUTIVE_CHARACTERS_CHECK_FAILED	The credential consists of the same character repeated more than 3 times consecutively. For example, 2222.
1124	EXCEPTION_CREDENTIAL_ALIAS_CHECK_FAILED	The credential repeats or includes the user alias.
1125	EXCEPTION_CREDENTIAL_EXTENSION_CHECK_FAILED	The credential repeats or includes the user dtmfaccessid.
1126	EXCEPTION_CREDENTIAL_ASCENDING_CHARACTERS_CHECK_FAILED	The credential consists of ascending consecutive characters. For example, ABCDE.
1127	EXCEPTION_CREDENTIAL_DESCENDING_CHARACTERS_CHECK_FAILED	The credential consists of descending consecutive characters. For example, FEDCBA.
1130	EXCEPTION_CREDENTIAL_TWO_CONSECUTIVE_CHARACTERS_CHECK_FAILED	The credential consists of the same character repeated more than 2 times consecutively. For example, 222.
1131	EXCEPTION_CREDENTIAL_THREE_UNIQUE_DIGITS_CHECK_FAILED	The credential does not contain at least three unique digits.
1132	EXCEPTION_CREDENTIAL_FIRSTNAME_CHECK_FAILED	The credential is the same as the numeric representation of the user's first name.
1133	EXCEPTION_CREDENTIAL_LASTNAME_CHECK_FAILED	The credential is the same as the numeric representation of the user's last name.

Error #	Name	Description
1134	EXCEPTION_CREDENTIAL_DIGITGROUPS_CHECK_FAILED	The credential consists of groups of repeated digits.
1135	EXCEPTION_CREDENTIAL_KEYPAD_CHECK_FAILED	The credential consists of patterns that are dialed in a straight line on a keypad.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CredentialPolicyObjectId

Property Name	Value
Description:	The unique identifier of the CredentialPolicy object that is associated with this credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialPolicyObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialPolicyObjectId." If "tbl_Credential.CredentialPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Credentials

Property Name	Value
Description:	The PIN or password, for a user. The credentials are stored in an encrypted format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.Credentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	Credentials
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.Credentials." If "tbl_Credential.Credentials" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@CredentialType

Property Name	Value
Description:	The type of credential such as password, PIN, Windows or Domino credential.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.CredentialType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	CredentialType
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.CredentialType." If "tbl_Credential.CredentialType" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	False

@strCredentials

Property Name	Value
Description:	Alternate to @Credentials. If passed in, the text will be converted to binary and override the @Credentials parameter.
Notes:	This parameter is here as a convenience for clients that prefer to avoid varbinary types when using string-based credentials.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	CredentialsString
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User object to which this credential belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Credential.UserId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Credential.UserId." If "tbl_Credential.UserId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.66. csp_DirectoryHandlerCreate

Creates a new DirectoryHandler object by inserting a new row into tbl_DirectoryHandler. This procedure also creates several other objects:

- * The call actions for Exit, No Input, No Selection and Zero conditions by inserting a new row into tbl_CallAction for each condition.
- * A new handler by inserting a new row into tbl_Handler
- * If provided, a new DtmfAccessId by inserting a new row into tbl_DtmfAccessId
- * If provided, a new voice name for the interview handler by activating an existing StreamFile object in tbl_StreamFile that was allocated using csp_AllocateVoiceFile.

Additional Information

The parameter @DisplayName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@AutoRoute	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will automatically route a call to the extension assigned to the subscriber on a unique match without prompting the caller to verify the match; or to present a list of matches, even if only one, and prompt the user to verify the match.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@EndDialDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits after caller input before performing the action indicated by the input.
Optional	@Exit_Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMatches	In	inherit	smallint (2 bytes)	The number of matches, that if exceeded, will result in Cisco Unity Connection prompting the caller to dial more letters.
Optional	@MenuStyle	In	inherit	smallint (2 bytes)	A flag indicating how Cisco Unity Connection presents directory matches to callers - either in "menu choice" or "extension list" format.
Optional	@NoInput_Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@NoInput_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@NoInput_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@NoSelection_Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@NoSelection_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@NoSelection_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@PlayAllNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the names of subscribers in the directory for caller selection, rather than requiring the caller to search by spelled name.
Optional	@SayExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection provides a menu of subscriber names including extensions, or just subscriber names.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ScopeObjectCosObjec tId	In	inherit	char (36 characters)	The unique identifier of the COS which acts as the filter for the directory handler.
Optional	@ScopeObjectDistributi onListObjectId	In	inherit	char (36 characters)	The unique identifier of the distribution list which acts as the filter for the directory handler.
Optional	@ScopeObjectLocation ObjectId	In	inherit	char (36 characters)	The unique identifier of the location which acts as the filter for the directory handler.
Optional	@SearchByFirstName	In	inherit	smallint (2 bytes)	A flag indicating whether a directory handler searches for subscribers by using first name first, or last name first.
Optional	@SearchScope	In	inherit	smallint (2 bytes)	The scope of the directory that Cisco Unity Connection will search.
Optional	@SearchScopeObjectId	In	ignore	char (36 characters)	Identifier of the object to use for scoping.
Optional	@StartDialDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits for the caller to start dialing. Time to wait for caller to start dialing in seconds. This is controlled on the SA's Caller Input 'timeout if no input in seconds' setting.
Optional	@Tries	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection will reprompt the caller for input, e.g. dial name.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the directory handler inherit language from location.
Optional	@UseStarToExit	In	inherit	smallint (2 bytes)	A flag indicating the key on the phone to use for "exit the directory." This controls whether the directory handler uses star ("*") to exit (like the rest of the conversation) or pound/hash("#") to exit.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@VoiceEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the directory handler will use voice based addressing rather than touchtones.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this directory handler (if voice name has already been recorded).
Optional	@Zero_Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Zero_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Zero_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.

Exceptions

csp_DirectoryHandlerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. A default location object was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. 2. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AutoRoute

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will automatically route a call to the extension assigned to the subscriber on a unique match without prompting the caller to verify the match; or to present a list of matches, even if only one, and prompt the user to verify the match.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.AutoRoute

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.AutoRoute." If "tbl_DirectoryHandler.AutoRoute" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)

Property Name	Value
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDialDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits after caller input before performing the action indicated by the input.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.EndDialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.EndDialDelay." If "tbl_DirectoryHandler.EndDialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	Must default to NULL since default value of 'Take Message' for tbl_CallAction.Action is not the default value we want for this action.
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMatches

Property Name	Value
Description:	The number of matches, that if exceeded, will result in Cisco Unity Connection prompting the caller to dial more letters.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.MaxMatches
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.MaxMatches." If "tbl_DirectoryHandler.MaxMatches" can be NULL, then explicit NULL is allowed.
Default Value:	8
Direction:	In
Update Column Value From Parameter:	True

@MenuStyle

Property Name	Value
Description:	A flag indicating how Cisco Unity Connection presents directory matches to callers - either in "menu choice" or "extension list" format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.MenuStyle
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.MenuStyle." If "tbl_DirectoryHandler.MenuStyle" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NoInput_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	Must default to NULL since default value of 'Take Message' for tbl_CallAction.Action is not the default value we want for this action.
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@NoInput_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoInput_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	Must default to NULL since default value of 'Take Message' for tbl_CallAction.Action is not the default value we want for this action.
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out

Property Name	Value
Update Column Value From Parameter:	False

@PlayAllNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the names of subscribers in the directory for caller selection, rather than requiring the caller to search by spelled name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.PlayAllNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.PlayAllNames." If "tbl_DirectoryHandler.PlayAllNames" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection provides a menu of subscriber names including extensions, or just subscriber names.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SayExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SayExtension." If "tbl_DirectoryHandler.SayExtension" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ScopeObjectCosObjectId

Property Name	Value
Description:	The unique identifier of the COS which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectCosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectCosObjectId." If "tbl_DirectoryHandler.ScopeObjectCosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScopeObjectDistributionListObjectId

Property Name	Value
Description:	The unique identifier of the distribution list which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectDistributionListObjectId." If "tbl_DirectoryHandler.ScopeObjectDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ScopeObjectLocationObjectId

Property Name	Value
Description:	The unique identifier of the location which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectLocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectLocationObjectId." If "tbl_DirectoryHandler.ScopeObjectLocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SearchByFirstName

Property Name	Value
Description:	A flag indicating whether a directory handler searches for subscribers by using first name first, or last name first.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SearchByFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SearchByFirstName." If "tbl_DirectoryHandler.SearchByFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SearchScope

Property Name	Value
Description:	The scope of the directory that Cisco Unity Connection will search.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SearchScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SearchScope
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SearchScope." If "tbl_DirectoryHandler.SearchScope" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SearchScopeObjectId

Property Name	Value
Description:	Identifier of the object to use for scoping.
Notes:	This is for backwards compatibility - using one of the individual object ids is preferred (ScopeObjectCosObjectId, ScopeObjectDistributionListObjectId, ScopeObjectLocationObjectId)
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@StartDialDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits for the caller to start dialing. Time to wait for caller to start dialing in seconds. This is controlled on the SA's Caller Input 'timeout if no input in seconds' setting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.StartDialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.StartDialDelay." If "tbl_DirectoryHandler.StartDialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Tries

Property Name	Value
Description:	The number of times Cisco Unity Connection will reprompt the caller for input, e.g. dial name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.Tries
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.Tries." If "tbl_DirectoryHandler.Tries" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the directory handler inherit language from location.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseStarToExit

Property Name	Value
Description:	A flag indicating the key on the phone to use for "exit the directory." This controls whether the directory handler uses star ("*") to exit (like the rest of the conversation) or pound/hash("#") to exit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.UseStarToExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.UseStarToExit." If "tbl_DirectoryHandler.UseStarToExit" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@VoiceEnabled

Property Name	Value
Description:	A flag indicating whether the directory handler will use voice based addressing rather than touchtones.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_DirectoryHandler.VoiceEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.VoiceEnabled." If "tbl_DirectoryHandler.VoiceEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this directory handler (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Zero_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	Must default to NULL since default value of 'Take Message' for tbl_CallAction.Action is not the default value we want for this action.
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Zero_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Zero_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.67. csp_DirectoryHandlerDelete

Deletes a DirectoryHandler object from tbl_DirectoryHandler as specified by the @ObjectId parameter. This procedure also deletes several objects related to a DistributionList object:

- * The base Handler object in tbl_Handler.
- * Each of the four CallAction objects in tbl_CallAction related to this DirectoryHandler.
- * If there is an extension number assigned to the DirectoryHandler, the related DtmfAccessId object is deleted from tbl_DtmfAccessId.
- * If the DirectoryHandler has a recorded voice name, the related StreamFile object is deleted from tbl_StreamFile by executing csp_StreamFileDelete.

Additional Information

An optional parameter is the @ReplacementDirectoryHandler. If passed in, any references to this directory handler will be replaced by this directory handler.

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the directory handler.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ReplacementDirectoryHandlerObjectId	In	ignore	char (36 characters)	Any references to this directory handler will be replaced by this handler.

Exceptions

csp_DirectoryHandlerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified DirectoryHandler object was not found. The names of the object (Directory handler), table (tbl_Handler), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Handler), and the column (----) are included with the exception message. The active transaction is rolled back.
1016	EXCEPTION_OBJECT_UNDELETABLE	The DirectoryHandler specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Directory handler) and table (tbl_Handler),are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReplacementDirectoryHandlerObjectId

Property Name	Value
Description:	Any references to this directory handler will be replaced by this handler.
Notes:	Options. Defaults to opening greeting.
Business Rules:	
Developer Notes:	
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.68. csp_DirectoryHandlerModify

Updates the attributes of a DirectoryHandler object based on the values passed in via the parameters. The @ObjectId parameter identifies the DirectoryHandler object that will be updated. This procedure will also update the AfterMessageAction, DtmfAccessId and VoiceName, if the parameters are passed in.

Additional Information

If @VoiceName is passed in and contains a value other than the 'special default' :

- * If the DirectoryHandler does not already have a VoiceName, a new StreamFile object is created.
- * If the DirectoryHandler already has a VoiceName, the value of the VoiceName is updated.
- * If @VoiceName is set to NULL and the DirectoryHandler has an existing VoiceName, the existing StreamFile object belonging to the specified DirectoryHandler is deleted.

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@AutoRoute	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will automatically route a call to the extension assigned to the subscriber on a unique match without prompting the caller to verify the match; or to present a list of matches, even if only one, and prompt the user to verify the match.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EndDialDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits after caller input before performing the action indicated by the input.
Optional	@Exit_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Exit_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Exit_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@MaxMatches	In	inherit	smallint (2 bytes)	The number of matches, that if exceeded, will result in Cisco Unity Connection prompting the caller to dial more letters.
Optional	@MenuStyle	In	inherit	smallint (2 bytes)	A flag indicating how Cisco Unity Connection presents directory matches to callers - either in "menu choice" or "extension list" format.
Optional	@NoInput_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@NoInput_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@NoInput_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@NoSelection_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@NoSelection_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@NoSelection_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@PlayAllNames	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection plays the names of subscribers in the directory for caller selection, rather than requiring the caller to search by spelled name.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SayExtension	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection provides a menu of subscriber names including extensions, or just subscriber names.
Optional	@ScopeObjectCosObjectId	In	inherit	char (36 characters)	The unique identifier of the COS which acts as the filter for the directory handler.
Optional	@ScopeObjectDistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the distribution list which acts as the filter for the directory handler.
Optional	@ScopeObjectLocationObjectId	In	inherit	char (36 characters)	The unique identifier of the location which acts as the filter for the directory handler.
Optional	@SearchByFirstName	In	inherit	smallint (2 bytes)	A flag indicating whether a directory handler searches for subscribers by using first name first, or last name first.
Optional	@SearchScope	In	inherit	smallint (2 bytes)	The scope of the directory that Cisco Unity Connection will search.
Optional	@SearchScopeObjectId	In	ignore	char (36 characters)	Identifier of the object to use for scoping.
Optional	@StartDialDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits for the caller to start dialing. Time to wait for caller to start dialing in seconds. This is controlled on the SA's Caller Input 'timeout if no input in seconds' setting.
Optional	@Tries	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection will reprompt the caller for input, e.g. dial name.
Optional	@Undeletable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the directory handler inherit language from location.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@UseStarToExit	In	inherit	smallint (2 bytes)	A flag indicating the key on the phone to use for "exit the directory." This controls whether the directory handler uses star ("*") to exit (like the rest of the conversation) or pound/hash("#") to exit.
Optional	@VoiceEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the directory handler will use voice based addressing rather than touchtones.
Optional	@VoiceName	In	explicit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@Zero_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@Zero_TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@Zero_TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.

Exceptions

csp_DirectoryHandlerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified DirectoryHandler object was not found. The names of the object (Directory handler), table (tbl_DirectoryHandler), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AutoRoute

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will automatically route a call to the extension assigned to the subscriber on a unique match without prompting the caller to verify the match; or to present a list of matches, even if only one, and prompt the user to verify the match.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_DirectoryHandler.AutoRoute
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.AutoRoute." If "tbl_DirectoryHandler.AutoRoute" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EndDialDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits after caller input before performing the action indicated by the input.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.EndDialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.EndDialDelay." If "tbl_DirectoryHandler.EndDialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Exit_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxMatches

Property Name	Value
Description:	The number of matches, that if exceeded, will result in Cisco Unity Connection prompting the caller to dial more letters.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.MaxMatches
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.MaxMatches." If "tbl_DirectoryHandler.MaxMatches" can be NULL, then explicit NULL is allowed.
Default Value:	8
Direction:	In
Update Column Value From Parameter:	True

@MenuStyle

Property Name	Value
Description:	A flag indicating how Cisco Unity Connection presents directory matches to callers - either in "menu choice" or "extension list" format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.MenuStyle
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.MenuStyle." If "tbl_DirectoryHandler.MenuStyle" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@NoInput_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@NoInput_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoInput_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@NoSelection_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@PlayAllNames

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection plays the names of subscribers in the directory for caller selection, rather than requiring the caller to search by spelled name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.PlayAllNames
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.PlayAllNames." If "tbl_DirectoryHandler.PlayAllNames" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SayExtension

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection provides a menu of subscriber names including extensions, or just subscriber names.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SayExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SayExtension." If "tbl_DirectoryHandler.SayExtension" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ScopeObjectCosObjectId

Property Name	Value
Description:	The unique identifier of the COS which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectCosObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectCosObjectId." If "tbl_DirectoryHandler.ScopeObjectCosObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ScopeObjectDistributionListObjectId

Property Name	Value
Description:	The unique identifier of the distribution list which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectDistributionListObjectId." If "tbl_DirectoryHandler.ScopeObjectDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ScopeObjectLocationObjectId

Property Name	Value
Description:	The unique identifier of the location which acts as the filter for the directory handler.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.ScopeObjectLocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.ScopeObjectLocationObjectId." If "tbl_DirectoryHandler.ScopeObjectLocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SearchByFirstName

Property Name	Value
Description:	A flag indicating whether a directory handler searches for subscribers by using first name first, or last name first.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SearchByFirstName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SearchByFirstName." If "tbl_DirectoryHandler.SearchByFirstName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@SearchScope

Property Name	Value
Description:	The scope of the directory that Cisco Unity Connection will search.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.SearchScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SearchScope
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.SearchScope." If "tbl_DirectoryHandler.SearchScope" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SearchScopeObjectId

Property Name	Value
Description:	Identifier of the object to use for scoping.
Notes:	This is for backwards compatibility - using one of the individual object ids is preferred (ScopeObjectCosObjectId, ScopeObjectDistributionListObjectId, ScopeObjectLocationObjectId)
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@StartDialDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits for the caller to start dialing. Time to wait for caller to start dialing in seconds. This is controlled on the SA's Caller Input 'timeout if no input in seconds' setting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.StartDialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.StartDialDelay." If "tbl_DirectoryHandler.StartDialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Tries

Property Name	Value
Description:	The number of times Cisco Unity Connection will reprompt the caller for input, e.g. dial name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.Tries
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.Tries." If "tbl_DirectoryHandler.Tries" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the directory handler inherit language from location.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UseStarToExit

Property Name	Value
Description:	A flag indicating the key on the phone to use for "exit the directory." This controls whether the directory handler uses star ("*") to exit (like the rest of the conversation) or pound/hash("#") to exit.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DirectoryHandler.UseStarToExit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.UseStarToExit." If "tbl_DirectoryHandler.UseStarToExit" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@VoiceEnabled

Property Name	Value
Description:	A flag indicating whether the directory handler will use voice based addressing rather than touchtones.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_DirectoryHandler.VoiceEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DirectoryHandler.VoiceEnabled." If "tbl_DirectoryHandler.VoiceEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Zero_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@Zero_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Zero_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.69. csp_DistributionListCreate

Creates a new DistributionList object by inserting a new row into tbl_DistributionList. It also creates a new Alias object in tbl_Alias by executing csp_AliasCreate. Two other objects may also be created:

- * If a DtmfAccessID is passed in, a new DtmfAccessId object is created by executing csp_DtmfAccessIdCreate.
- * If a VoiceName is passed in, a new StreamFile object is created by executing csp_StreamFileModify.

Additional Information

The parameter @Alias must be provided.

If the parameter @LocationObjectId contains NULL, the LocationObjectId column is set to the default location. Otherwise the LocationObjectId is set to the value contained in @LocationObjectId.

If the parameter @DtmfAccessId contains a value other than NULL, a DtmfAccessId object is created for this distribution list.

If the parameter @VoiceName contains a value other than NULL, a StreamFile object is created with the value of tbl_StreamFile.FileName = @VoiceName.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AllowContacts	In	inherit	smallint (2 bytes)	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Optional	@AllowForeignMessage	In	inherit	smallint (2 bytes)	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)
Optional	@AltName	In	inherit	nvarchar (64 characters)	The alternate spelling of the distributionlist name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the system distribution list to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@IsPublic	In	inherit	smallint (2 bytes)	A flag indicating whether the system distribution list is addressable by all subscribers on all VMSes throughout the Unity Organization.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the LocationVMS object to which this system distribution list belongs.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct SMTP address (the part of the address before the @ sign).
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DistributionList object.
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this distribution list can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this distribution list (if voice name has already been recorded).

Exceptions

csp_DistributionListCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @Alias is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Location object was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. A default location object was not found. The names of the object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message.

Parameter Properties

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AllowContacts

Property Name	Value
Description:	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowContacts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowContacts." If "tbl_DistributionList.AllowContacts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AllowForeignMessage

Property Name	Value
Description:	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowForeignMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowForeignMessage." If "tbl_DistributionList.AllowForeignMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AltName

Property Name	Value
Description:	The alternate spelling of the distributionlist name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AltName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AltName." If "tbl_DistributionList.AltName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the system distribution list to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	The alias is used as the display name if this parameter is not specified.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.DisplayName." If "tbl_DistributionList.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	A DtmfAccessId (extension) is optional. Messages are delivered to the list based on the SMTP address even if an DTMFAccessId does not exist.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsPublic

Property Name	Value
Description:	A flag indicating whether the system distribution list is addressable by all subscribers on all VMSes throughout the Unity Organization.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_DistributionList.IsPublic
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.IsPublic." If "tbl_DistributionList.IsPublic" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the LocationVMS object to which this system distribution list belongs.
Notes:	If this parameter is not specified, the default location of the VMS is used.
Business Rules:	
Developer Notes:	Could you really make this on a different location?
Reference Table/Column:	tbl_DistributionList.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.LocationObjectId." If "tbl_DistributionList.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct SMTP address (the part of the address before the @ sign).
Notes:	This is optional, and is only needed for Unicode Alias that cannot be converted into a valid SMTP address.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DistributionList object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.ObjectId." If "tbl_DistributionList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this distribution list can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.Undeletable." If "tbl_DistributionList.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this distribution list (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	A recorded voice name is optional.
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.70. csp_DistributionListDelete

Deletes a DistributionList object from tbl_DistributionList as specified by the @ObjectId parameter. This procedure also deletes several objects related to a DistributionList object:

- * Any member mappings in tbl_DistributionListMember where the specified distribution list is the member of another distribution list are deleted.
- * The related Alias object is deleted from tbl_Alias by executing csp_AliasDelete.
- * If there is an extension number assigned to the DistributionList, the related DtmfAccessId object is deleted from tbl_DtmfAccessId.
- * If the DistributionList has a recorded voice name, the related StreamFile object is deleted from tbl_StreamFile by executing csp_StreamFileDelete.

Additional Information

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the distribution list.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Find distribution list by ObjectId
Optional	@AllowContacts	In	inherit	smallint (2 bytes)	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Optional	@AllowForeignMessage	In	inherit	smallint (2 bytes)	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_DistributionListDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified DistributionList object was not found. The names of the object (Distribution list), table (tbl_DistributionList), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_DistributionList), and the column (----) are included with the exception message. The active transaction is rolled back.
1016	EXCEPTION_OBJECT_UNDELETABLE	The DistributionList specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Distribution list) and table (tbl_DistributionList), are included with the exception message.

Parameter Properties

@AllowContacts

Property Name	Value
Description:	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowContacts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowContacts." If "tbl_DistributionList.AllowContacts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AllowForeignMessage

Property Name	Value
Description:	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowForeignMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowForeignMessage." If "tbl_DistributionList.AllowForeignMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Find distribution list by ObjectId
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.ObjectId." If "tbl_DistributionList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.71. csp_DistributionListMemberCreate

Adds a member (user or another distribution list) to the specified DistributionList. Creates a new DistributionListMember object by inserting a new row into tbl_DistributionListMember.

Additional Information

The parameter @DistributionListObjectId must be provided.

Also, either the parameter @Member_UserObjectId (adding a user as a member) or @Member_DistributionListObjectId (adding a distribution list as a member) must be provided.

Business Rules

1. One of the @Member* parameters must contain a valid member, while the remaining @Member_* parameter contains a value of NULL.
2. A Distribution List cannot be a Member of itself.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object to which this distribution list member belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MemberContactObjectId	In	inherit	char (36 characters)	The member of this distribution list. If the member is a contact, the unique identifier of the Contact object that is a member of the distribution list. Otherwise this attribute is set to NULL.
Optional	@MemberDistributionListObjectId	In	inherit	char (36 characters)	The member of this distribution list. If the member is another distribution list, the unique identifier of DistributionList object that is a member of the distribution list. Otherwise, this attribute is set to NULL.
Optional	@MemberUserObjectId	In	inherit	char (36 characters)	The member of this distribution list. If the member is a user, the unique identifier of the User object that is a member of the distribution list. Otherwise, this attribute is set to NULL.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DistributionListMember object.

Exceptions

csp_DistributionListMemberCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DistributionListObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DistributionListObjectId

Property Name	Value
Description:	The unique identifier of the DistributionList object to which this distribution list member belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.DistributionListObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.DistributionListObjectId." If "tbl_DistributionListMember.DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MemberContactObjectId

Property Name	Value
Description:	The member of this distribution list. If the member is a contact, the unique identifier of the Contact object that is a member of the distribution list. Otherwise this attribute is set to NULL.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.MemberContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.MemberContactObjectId." If "tbl_DistributionListMember.MemberContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MemberDistributionListObjectId

Property Name	Value
Description:	The member of this distribution list. If the member is another distribution list, the unique identifier of DistributionList object that is a member of the distribution list. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	One of the @Member* parameters must contain a valid member, while the remaining @Member_* parameter contains a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.MemberDistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.MemberDistributionListObjectId." If "tbl_DistributionListMember.MemberDistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MemberUserObjectId

Property Name	Value
Description:	The member of this distribution list. If the member is a user, the unique identifier of the User object that is a member of the distribution list. Otherwise, this attribute is set to NULL.
Notes:	
Business Rules:	One of the @Member_* parameters must contain a valid member, while the remaining @Member_* parameter contains a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.MemberUserObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.MemberUserObjectId." If "tbl_DistributionListMember.MemberUserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DistributionListMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.ObjectId." If "tbl_DistributionListMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.72. csp_DistributionListMemberDelete

Deletes a DistributionListMember object from tbl_DistributionListMember as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DistributionListMember object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_DistributionListMemberDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	If the value of the required parameter @ObjectId is NULL, a "Parameter NULL Required" exception is thrown. The name of the required parameter that has a value of NULL is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified DistributionListMember object was not found. The names of the object (Distribution list member), table (tbl_DistributionListMember), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_DistributionListMember), and the column (----) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DistributionListMember object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionListMember.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionListMember.ObjectId." If "tbl_DistributionListMember.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.73. csp_DistributionListModify

Updates the attributes of a DistributionList object based on the values passed in via the parameters. The @ObjectId parameter identifies the DistributionList object that will be updated. This procedure will also update the DtmfAccessId and VoiceName, if the parameters are passed in. See notes for additional information.

Additional Information

Note that the LocationObjectId column cannot be modified.

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

If @DtmfAccessId is passed in and contains a value other than the 'special default' or NULL:

- * If the DistributionList does not already have a DtmfAccessId, a new DtmfAccessId object is created.
- * If the DistributionList already has a DtmfAccessId, the value of the DtmfAccessId is updated.
- * If @DtmfAccess is set to NULL and the DistributionList has an DtmfAccessId, the existing DtmfAccessId object belonging to the specified DistributionList is deleted.

If @VoiceName is passed in and contains a value other than the 'special default' or NULL:

- * If the DistributionList does not already have a VoiceName, a new StreamFile object is created.
- * If the DistributionList already has a VoiceName, the value of the VoiceName is updated.
- * If @VoiceName is set to NULL and the DistributionList has an existing VoiceName, the existing StreamFile object belonging to the specified DistributionList deleted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DistributionList object.
Optional	@Alias	In	inherit	nvarchar (64 characters)	The unique text name for either a user, distribution list, or personal group.
Optional	@AllowContacts	In	inherit	smallint (2 bytes)	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Optional	@AllowForeignMessage	In	inherit	smallint (2 bytes)	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AltName	In	inherit	nvarchar (64 characters)	The alternate spelling of the distributionlist name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of the system distribution list to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.
Optional	@IsPublic	In	inherit	smallint (2 bytes)	A flag indicating whether the system distribution list is addressable by all subscribers on all VMSeS throughout the Unity Organization.
Optional	@MailName	In	ignore	varchar (64 characters)	Name used to construct SMTP address (the part of the address before the @ sign).
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this distribution list can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this distribution list.

Exceptions

csp_DistributionListModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are four conditions that can cause an Object Not Found exception to be thrown:</p> <ol style="list-style-type: none"> 1. The specified DistributionList object was not found. The names of the object (Distribution list), table (tbl_DistributionList), and column (ObjectId) are included with the exception message. 2. An attempt was made to delete an DtmfAccessId object (i.e. @DtmfAccessId = NULL) that was not found. The names of the object (Dtmf access id), table (tbl_DtmfAccessId), and column (ObjectId) are included with the exception message. 3. An attempt was made to modify an DtmfAccessId object that was not found. The names of the object (Dtmf access id), table (tbl_DtmfAccessId), and column (ObjectId) are included with the exception message. 4. An attempt was made to delete a StreamFile object (i.e., @VoiceName = NULL) that was not found. The names of the object (Stream file), table (tbl_DistributionList), and column (StreamFileObjectId) are included with the exception message.

Parameter Properties

@Alias

Property Name	Value
Description:	The unique text name for either a user, distribution list, or personal group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Alias.Alias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	Alias
Null Handling:	Inherit - inherit parameter value from "tbl_Alias.Alias." If "tbl_Alias.Alias" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AllowContacts

Property Name	Value
Description:	A flag indicating whether contacts (system, VPIM, virtual) are allowed to be members of this Distribution List. Purpose of this flag is to enable administrators to create a Distribution List whose members are Unity users only.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowContacts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowContacts." If "tbl_DistributionList.AllowContacts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AllowForeignMessage

Property Name	Value
Description:	Controls if we allow foreign message systems to send to this particular distribution list. Only valid if the list is for subscribers only (i.e. does not allow contacts)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AllowForeignMessage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AllowForeignMessage." If "tbl_DistributionList.AllowForeignMessage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AltName

Property Name	Value
Description:	The alternate spelling of the distributionlist name in an internationally recognizable format (i.e., ASCII only characters) used for TUI client name lookup and message addressing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.AltName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.AltName." If "tbl_DistributionList.AltName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of the system distribution list to be used when displaying entries such as in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.DisplayName." If "tbl_DistributionList.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsPublic

Property Name	Value
Description:	A flag indicating whether the system distribution list is addressable by all subscribers on all VMSeS throughout the Unity Organization.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.IsPublic
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.IsPublic." If "tbl_DistributionList.IsPublic" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MailName

Property Name	Value
Description:	Name used to construct SMTP address (the part of the address before the @ sign).
Notes:	This is optional, and is only needed for Unicode Alias that cannot be converted into a valid SMTP address.
Business Rules:	
Developer Notes:	This is varchar(64) to match size of Alias (nvarchar(64))
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DistributionList object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.ObjectId." If "tbl_DistributionList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Undeletable

Property Name	Value
Description:	A flag indicating whether this distribution list can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DistributionList.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DistributionList.Undeletable." If "tbl_DistributionList.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	New voice file to use for this distribution list.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.74. csp_DomainNameModify

This sproc will change the domain name in tbl_alias, tbl_smtpserver and tbl_location.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@NewDomainName	In	inherit	varchar (255 characters)	The new domain to use.

Exceptions

csp_DomainNameModify does not throw any exceptions.

Parameter Properties

@NewDomainName

Property Name	Value
Description:	The new domain to use.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_SmtpServer.DomainName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_SmtpServer.DomainName." If "tbl_SmtpServer.DomainName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.75. csp_DtmfAccessIdCreate

Creates a new DtmfAccessId object (extension number) for a subscriber (primary and alternate extension), call handler, interview handler, directory handler, location, contact, or distribution list by inserting a new row into tbl_DtmfAccessId.

Additional Information

The parameters @DtmfAccessId and @IdIndex parameters must be provided.

One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.

If @LocationObjectId parameter is not passed in or contains NULL, the location is set to the object id of the parent's location.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Required	@IdIndex	In	inherit	int (4 bytes)	An index into the alternate extensions for a subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallPickupTimeout	In	inherit	smallint (2 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The Client Matter Code (CMS) to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign account or billing codes to the call.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of this DtmfAccessId to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this location (denormalized) belongs.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Optional	@Parent_ContactObjectId	In	inherit	char (36 characters)	The unique identifier of the Contact object to which this DtmfAccessId belongs.
Optional	@Parent_DistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object to which this DtmfAccessId belongs
Optional	@Parent_HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the Handler object to which this DtmfAccessId belongs
Optional	@Parent_LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this DtmfAccessId belongs,
Optional	@Parent_SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this DtmfAccessId belongs
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.

Exceptions

csp_DtmfAccessIdCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DtmfAccessId or @IdIndex) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the "Object Not Found" exception to be thrown: 1. The LocationVMS object was not found. The names of the missing object (Default location), table (tbl_LocationVMS), and column (IsPrimary) are included with the exception message. 2. The specified Location object was not found. The names of the missing object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.CallPickupTimeout." If "tbl_DtmfAccessId.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The Client Matter Code (CMS) to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign account or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.ClientMatterCode." If "tbl_DtmfAccessId.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of this DtmfAccessId to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DisplayName." If "tbl_DtmfAccessId.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IdIndex

Property Name	Value
Description:	An index into the alternate extensions for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.IdIndex

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.IdIndex." If "tbl_DtmfAccessId.IdIndex" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this location (denormalized) belongs.
Notes:	If @LocationObjectId is not passed in or contains NULL, the location will be set to the default location (LocationVMS object with IsPrimary=1). Otherwise the LocationObjectId is set to the value contained in @LocationObjectId.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.LocationObjectId." If "tbl_DtmfAccessId.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.ObjectId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.ObjectId." If "tbl_DtmfAccessId.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Parent_ContactObjectId

Property Name	Value
Description:	The unique identifier of the Contact object to which this DtmfAccessId belongs.
Notes:	
Business Rules:	One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.Parent_ContactObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.Parent_ContactObjectId." If "tbl_DtmfAccessId.Parent_ContactObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parent_DistributionListObjectId

Property Name	Value
Description:	The unique identifier of the DistributionList object to which this DtmfAccessId belongs
Notes:	
Business Rules:	One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.Parent_DistributionListObjectId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.Parent_DistributionListObjectID." If "tbl_DtmfAccessId.Parent_DistributionListObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parent_HandlerObjectID

Property Name	Value
Description:	The unique identifier of the Handler object to which this DtmfAccessId belongs
Notes:	
Business Rules:	One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.Parent_HandlerObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.Parent_HandlerObjectID." If "tbl_DtmfAccessId.Parent_HandlerObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parent_LocationObjectID

Property Name	Value
Description:	The unique identifier of the Location object to which this DtmfAccessId belongs,
Notes:	
Business Rules:	One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.Parent_LocationObjectID
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.Parent_LocationObjectID." If "tbl_DtmfAccessId.Parent_LocationObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Parent_SubscriberObjectID

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this DtmfAccessId belongs
Notes:	
Business Rules:	One of the @Parent_* parameters must specify a valid parent while the remaining @Parent_* parameters must contain a value of NULL.
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.Parent_SubscriberObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.Parent_SubscriberObjectID." If "tbl_DtmfAccessId.Parent_SubscriberObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.TransmitForcedAuthorizationCode." If "tbl_DtmfAccessId.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.76. csp_DtmfAccessIdDelete

Deletes a DtmfAccessId object (extension number) from tbl_DtmfAccessId as specified by the @ObjectId parameter.

Additional Information

If the DtmfAccessId references a Personal Destination Group, the associated row in tbl_PersonalDestinationGroupItem is also deleted.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_DtmfAccessIdDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions can cause a Object Not found exception to be thrown: 1. The DtmfAccessId object specified by the @ObjectId was not found. The names of the object (Dtmf access ID), table (tbl_DtmfAccessId), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_DtmfAccessId), and the column (----) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.ObjectId." If "tbl_DtmfAccessId.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.77. csp_DtmfAccessIdModify

Updates the attributes of a DtmfAccessId (extension) object for a subscriber (primary and alternate extension), call handler, interview handler, directory handler, location, contact, or distribution list based on the values passed in via the parameters. The @ObjectId parameter identifies the DtmfAccessId object that will be updated.

Additional Information

Changing the parent of a DtmfAccessId object is not allowed. To change the parent, delete the DtmfAccessId and then create a new one.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallPickupTimeout	In	inherit	smallint (2 bytes)	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Optional	@ClientMatterCode	In	inherit	varchar (40 characters)	The Client Matter Code (CMS) to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign account or billing codes to the call.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of this DtmfAccessId to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@IdIndex	In	inherit	int (4 bytes)	An index into the alternate extensions for a subscriber.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this location (denormalized) belongs.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.

Exceptions

csp_DtmfAccessIdModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The DtmfAccessId object specified by the @ObjectId was not found. The names of the object (Dtmf access ID), table (tbl_DtmfAccessId), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallPickupTimeout

Property Name	Value
Description:	The number of rings that Cisco Unity Connection will wait for a subscriber destination to answer before the call is forwarded to the next destination in the destination group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.CallPickupTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.CallPickupTimeout." If "tbl_DtmfAccessId.CallPickupTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@ClientMatterCode

Property Name	Value
Description:	The Client Matter Code (CMS) to transmit to Call Manger when the phone number is dialed on an outbound call. The CMC is entered after a phone number is dialed so that the customer can assign account or billing codes to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.ClientMatterCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	ClientMatterCode
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.ClientMatterCode." If "tbl_DtmfAccessId.ClientMatterCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of this DtmfAccessId to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	TextName
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DisplayName." If "tbl_DtmfAccessId.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IdIndex

Property Name	Value
Description:	An index into the alternate extensions for a subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.IdIndex
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.IdIndex." If "tbl_DtmfAccessId.IdIndex" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this location (denormalized) belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.LocationObjectId." If "tbl_DtmfAccessId.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a DtmfAccessId object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.ObjectId." If "tbl_DtmfAccessId.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.TransmitForcedAuthorizationCode

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.TransmitForcedAuthorizationCode." If "tbl_DtmfAccessId.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.78. csp_ExternalServiceCreate

Creates a new external service object by inserting a new row into tbl_MailboxStoreMap.

Additional Information

The parameter @Server must be provided.

For a ServiceType of "WebDav," a ServiceAlias, ServicePassword and Server is required. (It is possible to set WebDAV with no password, but Connection requires it.)

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Server	In	inherit	lvarchar (256 characters)	The name of the server on which the external service runs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DialString	In	inherit	nvarchar (40 characters)	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the external service used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the external service is enabled.
Optional	@Mounted	In	inherit	smallint (2 bytes)	***Obsolete - use IsEnabled instead***
Optional	@ObjectId	Out	inherit	char (36 characters)	A globally unique, system-generated identifier for a external service object.
Optional	@RequiredSecurity	In	inherit	int (4 bytes)	The method of encryption that Cisco Unity Connection will use on the connection with this external service.
Optional	@ServiceAlias	In	inherit	lvarchar (256 characters)	The unique text name (e.g., logon name) for a service to use to logon to the external service.
Optional	@ServicePassword	In	inherit	varchar (254 characters)	The password for logon to the external service.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ServiceType	In	inherit	int (4 bytes)	The type of external service (e.g., WebDAV, IMAP, MPE).
Optional	@UseServiceCredentials	In	inherit	smallint (2 bytes)	A flag indicating whether to use service credentials rather than user credentials to logon to the external service.

Exceptions

csp_ExternalServiceCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Alias and @Server) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DialString

Property Name	Value
Description:	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DialString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DialString." If "tbl_MailboxStoreMap.DialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the external service used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DisplayName." If "tbl_MailboxStoreMap.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the external service is enabled.
Notes:	Values: 0: The external service is disabled. 1: The external service is enabled.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Mounted

Property Name	Value
Description:	***Obsolete - use IsEnabled instead ***
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	A globally unique, system-generated identifier for a external service object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RequiredSecurity

Property Name	Value
Description:	The method of encryption that Cisco Unity Connection will use on the connection with this external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.RequiredSecurity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailstoreConnectionEncryption

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.RequiredSecurity." If "tbl_MailboxStoreMap.RequiredSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Server

Property Name	Value
Description:	The name of the server on which the external service runs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Server
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Server." If "tbl_MailboxStoreMap.Server" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ServiceAlias

Property Name	Value
Description:	The unique text name (e.g., logon name) for a service to use to logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServiceAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServiceAlias." If "tbl_MailboxStoreMap.ServiceAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ServicePassword

Property Name	Value
Description:	The password for logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServicePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServicePassword." If "tbl_MailboxStoreMap.ServicePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ServiceType

Property Name	Value
Description:	The type of external service (e.g., WebDAV, IMAP, MPE).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailboxStoreType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxStoreType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailboxStoreType." If "tbl_MailboxStoreMap.MailboxStoreType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseServiceCredentials

Property Name	Value
Description:	A flag indicating whether to use service credentials rather than user credentials to logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.UseServiceCredentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.UseServiceCredentials." If "tbl_MailboxStoreMap.UseServiceCredentials" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.79. csp_ExternalServiceDelete

Deletes an External Service by deleting a MailboxStoreMap object from tbl_MailboxStoreMap as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	A globally unique, system-generated identifier for a external service object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_ExternalServiceDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MailboxStoreMap object was not found. The names of the object (Mailbox store map), table (tbl_MailboxStoreMap), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MailboxStoreMap), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	A globally unique, system-generated identifier for a external service object.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.80. csp_ExternalServiceModify

Updates the attributes of a External Service by updating a MailboxStoreMap object based on the values passed in via the parameters. The @ObjectId parameter identifies the MailboxStoreMap object that is updated.

Additional Information

For a ServiceType of "WebDav," a ServiceAlias, ServicePassword and Server is required. (It is possible to set WebDAV with no password, but Connection requires it.)

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	A globally unique, system-generated identifier for a external service object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DialString	In	inherit	nvarchar (40 characters)	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the external service used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.
Optional	@IsEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the external service is enabled.
Optional	@Mounted	In	inherit	smallint (2 bytes)	***Obsolete - use IsEnabled instead***
Optional	@RequiredSecurity	In	inherit	int (4 bytes)	The method of encryption that Cisco Unity Connection will use on the connection with this external service.
Optional	@Server	In	inherit	lvarchar (256 characters)	The name of the server on which the external service runs.
Optional	@ServiceAlias	In	inherit	lvarchar (256 characters)	The unique text name (e.g., logon name) for a service to use to logon to the external service.
Optional	@ServicePassword	In	inherit	varchar (254 characters)	The password for logon to the external service.
Optional	@ServiceType	In	inherit	int (4 bytes)	The type of external service (e.g., WebDAV, IMAP, MPE).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@UseServiceCredentials	In	inherit	smallint (2 bytes)	A flag indicating whether to use service credentials rather than user credentials to logon to the external service.

Exceptions

csp_ExternalServiceModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MailboxStoreMap object was not found. The names of the object (Mailbox store map), table (tbl_MailboxStoreMap), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DialString

Property Name	Value
Description:	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DialString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DialString." If "tbl_MailboxStoreMap.DialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the external service used when displaying entries such as in the administrative console, e.g., Cisco Unity Connection Administrator.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DisplayName." If "tbl_MailboxStoreMap.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsEnabled

Property Name	Value
Description:	A flag indicating whether the external service is enabled.
Notes:	Values: 0: The external service is disabled. 1: The external service is enabled.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Mounted

Property Name	Value
Description:	***Obsolete - use IsEnabled instead***
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	A globally unique, system-generated identifier for a external service object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RequiredSecurity

Property Name	Value
Description:	The method of encryption that Cisco Unity Connection will use on the connection with this external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.RequiredSecurity
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailstoreConnectionEncryption
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.RequiredSecurity." If "tbl_MailboxStoreMap.RequiredSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Server

Property Name	Value
Description:	The name of the server on which the external service runs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Server
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Server." If "tbl_MailboxStoreMap.Server" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ServiceAlias

Property Name	Value
Description:	The unique text name (e.g., logon name) for a service to use to logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServiceAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServiceAlias." If "tbl_MailboxStoreMap.ServiceAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ServicePassword

Property Name	Value
Description:	The password for logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServicePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServicePassword." If "tbl_MailboxStoreMap.ServicePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ServiceType

Property Name	Value
Description:	The type of external service (e.g., WebDAV, IMAP, MPE).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailboxStoreType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxStoreType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailboxStoreType." If "tbl_MailboxStoreMap.MailboxStoreType" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@UseServiceCredentials

Property Name	Value
Description:	A flag indicating whether to use service credentials rather than user credentials to logon to the external service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.UseServiceCredentials
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.UseServiceCredentials." If "tbl_MailboxStoreMap.UseServiceCredentials" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.81. csp_GetErrorText

Retrieves a localized error string given an error/exception code and an error message returned from the database server.

Additional Information

This is intended to give better (and localized) error messages where we can, but it not guaranteed to return localized text for every error and error message. The default behavior is to return the error message that was passed in.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Code	In	ignore	int (4 bytes)	Error or exception code returned from database server.
Required	@Message	In	ignore	lvarchar (1024 characters)	Error message returned from database server.
Optional	@ErrorText	Out	ignore	lvarchar (1024 characters)	Resulting error text - will default to the error message passed in if no matching error found.
Optional	@LanguageCode	In	ignore	int (4 bytes)	Language to retrieve message in (if available).

Exceptions

csp_GetErrorText does not throw any exceptions.

Parameter Properties

@Code

Property Name	Value
Description:	Error or exception code returned from database server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ErrorText

Property Name	Value
Description:	Resulting error text - will default to the error message passed in if no matching error found.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (1024 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@LanguageCode

Property Name	Value
Description:	Language to retrieve message in (if available).
Notes:	
Business Rules:	A value of '0' is not allowed.
Developer Notes:	For Windows 2003, valid values range from 1024 to 58378.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Message

Property Name	Value
Description:	Error message returned from database server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (1024 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.82. csp_GetLastError

Retrieves the code and message associated with the last database error or exception.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Code	Out	ignore	smallint (2 bytes)	Error or exception code returned by the last stored procedure.
Optional	@Message	Out	ignore	nvarchar (1024 characters)	Error or exception string returned by the last stored procedure.

Exceptions

csp_GetLastError does not throw any exceptions.

Parameter Properties

@Code

Property Name	Value
Description:	Error or exception code returned by the last stored procedure.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Message

Property Name	Value
Description:	Error or exception string returned by the last stored procedure.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (1024 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.83. csp_GetLocalizedText

Retrieves the localized of text as specified by the @LanguageCode and @Localization parameters. If found, the localized version of the text along with parameter substitution (@arg1 - @arg5) is returned in @LocalizedText.

Additional Information

The parameters @LanguageCode and @LocalizationKey must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LanguageCode	In	inherit	int (4 bytes)	The language code (LCID) indicating the language of the text in the LocalizedName column.
Required	@LocalizationKey	In	inherit	varchar (192 characters)	A familiar name referenced by other tables to obtain the localized name.
Optional	@arg1	In	ignore	lvarchar (256 characters)	Optional argument.
Optional	@arg2	In	ignore	lvarchar (256 characters)	Second optional parameter.
Optional	@arg3	In	ignore	lvarchar (256 characters)	Third optional argument.
Optional	@arg4	In	ignore	lvarchar (256 characters)	Fourth optional argument.
Optional	@arg5	In	ignore	lvarchar (256 characters)	Fifth optional argument.
Optional	@LocalizedText	Out	ignore	lvarchar (512 characters)	Localized version of the text with any parameter substitution done.

Exceptions

csp_GetLocalizedText will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@LanguageCode and @LocalizationKey) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@arg1

Property Name	Value
Description:	Optional argument.
Notes:	If passed, any occurrence of %1 will be replaced with the argument.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@arg2

Property Name	Value
Description:	Second optional parameter.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@arg3

Property Name	Value
Description:	Third optional argument.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvvarchar (256 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@arg4

Property Name	Value
Description:	Fourth optional argument.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvvarchar (256 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@arg5

Property Name	Value
Description:	Fifth optional argument.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvvarchar (256 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@LanguageCode

Property Name	Value
Description:	The language code (LCID) indicating the language of the text in the LocalizedName column.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocalizedText.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_LocalizedText.LanguageCode." If "tbl_LocalizedText.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LocalizationKey

Property Name	Value
Description:	A familiar name referenced by other tables to obtain the localized name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocalizedText.LocalizationKey
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (192 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocalizedText.LocalizationKey." If "tbl_LocalizedText.LocalizationKey" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LocalizedText

Property Name	Value
Description:	Localized version of the text with any parameter substitution done.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.84. csp_GetObjectByAnyExtension

Takes a dtmf id as input and returns the object id associated with it and the "type" of the object id i.e. whether it is a subscriber, a distribution list or a contact.

If the dtmf id cannot be found, the stored procedure returns NULL and -1.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DtmfAccessId	In	ignore	nvarchar (40 characters)	The dialable number.
Optional	@ObjectId	Out	ignore	char (36 characters)	The object id of a subscriber, distribution list or contact. The value is NULL is no object is found.
Optional	@ObjectType	Out	ignore	smallint (2 bytes)	The type of object id returned. Can be either a subscriber, a distribution list or a contact. The value is -1 if no object is found.

Exceptions

csp_GetObjectByAnyExtension will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@DtmfAccessId

Property Name	Value
Description:	The dialable number.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The object id of a subscriber, distribution list or contact. The value is NULL is no object is found.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ObjectType

Property Name	Value
Description:	The type of object id returned. Can be either a subscriber, a distribution list or a contact. The value is -1 if no object is found.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ObjectType
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.85. csp_GetObjectByPhoneNumber

Resolves a phone number to a user, subscriber, contact or personal contact.

Additional Information

The parameter @PhoneNumber must be provided.

If the purpose of calling this procedure is to resolve the phone number for a personal contact, the @UserObjectId must be provided.

The identifier of the user, subscriber, contact or personal contact object found as the owner of the phone number is returned in the @ObjectId parameter. The @ObjectType parameter identifies the object type of the owner (user, subscriber, contact or personal contact).

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@PhoneNumber	In	ignore	varchar (255 characters)	Contains the phone number to resolve.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	ignore	char (36 characters)	Contains the ObjectId of the user, subscriber, or personal contact to which the phone number resolves. If the phone number, it contains NULL.
Optional	@ObjectType	Out	ignore	smallint (2 bytes)	Contains the type of ObjectId (user, subscriber, or personal contact) to which the phone number resolves.
Optional	@UserObjectId	In	ignore	char (36 characters)	Contains the object id of the user who owns the personal contact for which to resolve the phone number.

Exceptions

csp_GetObjectByPhoneNumber will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @PhoneNumber is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	Contains the ObjectId of the user, subscriber, or personal contact to which the phone number resolves. If the phone number, it contains NULL.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ObjectType

Property Name	Value
Description:	Contains the type of ObjectId (user, subscriber, or personal contact) to which the phone number resolves.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ObjectType
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@PhoneNumber

Property Name	Value
Description:	Contains the phone number to resolve.
Notes:	Length of 255 is required to support SIP format phone numbers.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	PhoneNumber
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@UserId

Property Name	Value
Description:	Contains the object id of the user who owns the personal contact for which to resolve the phone number.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.86. csp_GetObjectBySmtpAddress

Resolves an SMTP address to a user, distribution list, or personal group.

Additional Information

The parameter @SmtpAddress must be provided.

If a matching SmtpAddress is found in tbl_Alias, @ObjectId contains the identifier of the user, distribution list, or personal contact object found matching the value of @SmtpAddress. The @ObjectType parameter identifies the object type of the owner (user, subscriber, or personal contact).

If the format of the provided @SmtpAddress parameter is valid, but a SmtpAddress matching the value of @SmtpAddress is not found in tbl_Alias, an Exception is not thrown. Rather @ObjectId is set to NULL.

Proxy address, such as those used for addressing messages to remote contacts via SMTP or VPIM, must be in the form [<address type>:]<alias>@<domain>. For example, SMTP:kbader@cisco.com.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@SmtpAddress	In	ignore	lvvarchar (512 characters)	Contains the target SMTP address to resolve.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	ignore	char (36 characters)	Contains the ObjectId of the user, distribution list, or personal group to which the SmtpAddress resolves. If the SmtpAddress is not found, it contains NULL.
Optional	@ObjectType	Out	ignore	smallint (2 bytes)	Contains the type of ObjectId (user, distribution list, personal group) to which the proxy address resolves.

Exceptions

csp_GetObjectBySmtpAddress will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @SmtpAddress is NULL. The name of the missing parameter is included with the exception message.
1003	EXCEPTION_PARAMETER_INVALID	The specified proxy address is not of the format [<address type>:]<alias>@<domain>. The name of the invalid parameter (@SmtpAddress) and the value of the @SmtpAddress parameter are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	Contains the ObjectId of the user, distribution list, or personal group to which the SmtpAddress resolves. If the SmtpAddress is not found, it contains NULL.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ObjectType

Property Name	Value
Description:	Contains the type of ObjectId (user, distribution list, personal group) to which the proxy address resolves.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	ObjectType
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	Out
Update Column Value From Parameter:	False

@SmtpAddress

Property Name	Value
Description:	Contains the target SMTP address to resolve.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.87. csp_GetProductVersion

Retrieves the product version as a string.

Additional Information

The product version is stored and read from the registry.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Version	Out	ignore	varchar (32 characters)	Receives the product version in dotted format such as "1.1.0.01"
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_GetProductVersion does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Version

Property Name	Value
Description:	Receives the product version in dotted format such as "1.1.0.01"
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (32 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.88. csp_GetSchemaVersion

Retrieves the database schema version as a string dot notation such as "1.1.892"

Additional Information

This information is pulled from tbl_LocationVMS, and represents the major, minor and build number.

Auditing is turned off for this stored procedure.

This is mainly for calling via the web service interface, thus the simplified output (rather than three separate int values).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Version	Out	ignore	varchar (32 characters)	Receives schema version as string in dot notation (major.minor.build)

Exceptions

csp_GetSchemaVersion does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Version

Property Name	Value
Description:	Receives schema version as string in dot notation (major.minor.build)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (32 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out

Property Name	Value
Update Column Value From Parameter:	False

6.89. csp_GreetingCreate

Creates a new Greeting object for a call handler by inserting a new row into tbl_Greeting.

Additional Information

The parameters @GreetingType and @CallHandlerObjectId of the call handler to which this greeting belongs must be provided.

This procedure also creates a "after greeting action" in tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this greeting rule belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Optional	@AfterGreeting_Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterGreeting_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterGreeting_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IgnoreDigits	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection takes action in response to touchtone keys pressed by callers during the greeting.
Optional	@PlayWhat	In	inherit	smallint (2 bytes)	The source for the greeting when this greeting is active.
Optional	@RepromptDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits without receiving any input from a caller before Cisco Unity Connection prompts the caller again.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Reprompts	In	inherit	smallint (2 bytes)	The number of times to reprompt a caller. After the number of times indicated here, Cisco Unity Connection performs the after-greeting action.
Optional	@TimeExpires	In	inherit	datetime (8 bytes)	The date and time when the greeting rule expires. The greeting rule is considered not expired (enabled), if the value is NULL or a future date. The greeting rule is considered expired (disabled), the value is in the past.

Exceptions

csp_GreetingCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@GreetingType and @CallHandlerObjectId) is NULL. The name of the missing parameter is included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	The specified configuration setting was not found. The name of the setting is included in the exception message.

Parameter Properties

@AfterGreeting_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	4

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AfterGreeting_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterGreeting_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this greeting rule belongs.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.CallHandlerObjectId." If "tbl_Greeting.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@GreetingType

Property Name	Value
Description:	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.GreetingType." If "tbl_Greeting.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	True

@IgnoreDigits

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection takes action in response to touchtone keys pressed by callers during the greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.IgnoreDigits

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.IgnoreDigits." If "tbl_Greeting.IgnoreDigits" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PlayWhat

Property Name	Value
Description:	The source for the greeting when this greeting is active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.PlayWhat
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PlayWhatType
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.PlayWhat." If "tbl_Greeting.PlayWhat" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RepromptDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits without receiving any input from a caller before Cisco Unity Connection prompts the caller again.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.RepromptDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.RepromptDelay." If "tbl_Greeting.RepromptDelay" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Reprompts

Property Name	Value
Description:	The number of times to reprompt a caller. After the number of times indicated here, Cisco Unity Connection performs the after-greeting action.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.Reprompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.Reprompts." If "tbl_Greeting.Reprompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeExpires

Property Name	Value
Description:	The date and time when the greeting rule expires. The greeting rule is considered not expired (enabled), if the value is NULL or a future date. The greeting rule is considered expired (disabled), the value is in the past.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.TimeExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.TimeExpires." If "tbl_Greeting.TimeExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.90. csp_GreetingDelete

Deletes one of the six standard greetings for a call handler from tbl_Greeting as specified by the @CallHandlerObjectId and @GreetingType ("Standard", "Off Hours", etc.) parameters.

Additional Information

This procedure also deletes the associated "after greeting action" in tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this greeting rule belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_GreetingDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@GreetingType and @CallHandlerObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The Greeting object for the specified @CallHandlerObjectId and @GreetingType was not found. The names of the object (Greeting), table (tbl_Greeting), and columns (CallHandlerObjectId and GreetingType) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Greeting), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this greeting rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.CallHandlerObjectId." If "tbl_Greeting.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@GreetingType

Property Name	Value
Description:	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.GreetingType." If "tbl_Greeting.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	False

6.91. csp_GreetingModify

Modifies one of the six standard greetings for a call handler. The attributes of a Greeting object are updated based on the values passed in via the parameters. The @GreetingType and @CallHandlerObjectId parameter identify the Greeting object that is updated.

Additional Information

This procedure also updates the associated "after greeting action" in tbl_CallAction.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this greeting rule belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Optional	@AfterGreeting_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterGreeting_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterGreeting_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Expired	In	ignore	smallint (2 bytes)	Enables or disables the greeting.
Optional	@IgnoreDigits	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection takes action in response to touchtone keys pressed by callers during the greeting.
Optional	@PlayWhat	In	inherit	smallint (2 bytes)	The source for the greeting when this greeting is active.
Optional	@RepromptDelay	In	inherit	smallint (2 bytes)	The amount of time (in seconds) that Cisco Unity Connection waits without receiving any input from a caller before Cisco Unity Connection prompts the caller again.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Reprompts	In	inherit	smallint (2 bytes)	The number of times to reprompt a caller. After the number of times indicated here, Cisco Unity Connection performs the after-greeting action.
Optional	@TimeExpires	In	inherit	datetime (8 bytes)	The date and time when the greeting rule expires. The greeting rule is considered not expired (enabled), if the value is NULL or a future date. The greeting rule is considered expired (disabled), the value is in the past.

Exceptions

csp_GreetingModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@GreetingType and @CallHandlerObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The Greeting object for the specified @CallHandlerObjectId and @GreetingType was not found. The names of the object (Greeting), table (tbl_Greeting), and columns (CallHandlerObjectId and GreetingType) are included with the exception message.

Parameter Properties

@AfterGreeting_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterGreeting_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterGreeting_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this greeting rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.CallHandlerObjectId." If "tbl_Greeting.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Expired

Property Name	Value
Description:	Enables or disables the greeting.
Notes:	Set to 1 (true) to expire the greeting and to 0 (false) to un-expire the greeting.
Business Rules:	
Developer Notes:	Setting this parameter to 1 causes TimeExpires to be set to a Jan 1, 1972. Setting it to 0 causes TimeExpires to be NULL.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@GreetingType

Property Name	Value
Description:	The type of greeting, e.g. "Standard," "Off Hours," "Busy," etc.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.GreetingType." If "tbl_Greeting.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	False

@IgnoreDigits

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection takes action in response to touchtone keys pressed by callers during the greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.IgnoreDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.IgnoreDigits." If "tbl_Greeting.IgnoreDigits" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PlayWhat

Property Name	Value
Description:	The source for the greeting when this greeting is active.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.PlayWhat

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	PlayWhatType
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.PlayWhat." If "tbl_Greeting.PlayWhat" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RepromptDelay

Property Name	Value
Description:	The amount of time (in seconds) that Cisco Unity Connection waits without receiving any input from a caller before Cisco Unity Connection prompts the caller again.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.RepromptDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.RepromptDelay." If "tbl_Greeting.RepromptDelay" can be NULL, then explicit NULL is allowed.
Default Value:	2
Direction:	In
Update Column Value From Parameter:	True

@Reprompts

Property Name	Value
Description:	The number of times to reprompt a caller. After the number of times indicated here, Cisco Unity Connection performs the after-greeting action.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.Reprompts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.Reprompts." If "tbl_Greeting.Reprompts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TimeExpires

Property Name	Value
Description:	The date and time when the greeting rule expires. The greeting rule is considered not expired (enabled), if the value is NULL or a future date. The greeting rule is considered expired (disabled), the value is in the past.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Greeting.TimeExpires
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Greeting.TimeExpires." If "tbl_Greeting.TimeExpires" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.92. csp_GreetingStreamFileCreate

Creates a new GreetingStreamFile object in the specified language for a call handler by inserting a new row into tbl_GreetingStreamFile.

Additional Information

The parameters @CallHandlerObjectId, @GreetingType, @LanguageCode, and @StreamFile must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which the stream file belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting (e.g., alternate) to which the stream file belongs.
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Required	@StreamFile	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_GreetingStreamFileCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId, @GreetingType, @LanguageCode, and @StreamFile) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The StreamFile object for the specified @FileName was not found. The names of the object (StreamFile, table (tbl_StreamFile), and columns (FileName) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.CallHandlerObjectId." If "tbl_GreetingStreamFile.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@GreetingType

Property Name	Value
Description:	The type of greeting (e.g., alternate) to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.GreetingType." If "tbl_GreetingStreamFile.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.LanguageCode." If "tbl_GreetingStreamFile.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StreamFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.93. csp_GreetingStreamFileDelete

Deletes a GreetingStreamFile object from tbl_GreetingStreamFile as specified by the combination of the @CallHandlerObjectId, @GreetingType, and @LanguageCode parameters. The StreamFile object in tbl_StreamFile associated with the GreetingStreamFile is also deleted by the procedure.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which the stream file belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting (e.g., alternate) to which the stream file belongs.
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_GreetingStreamFileDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId, @GreetingType, and @LanguageCode) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are two conditions that can cause an Object Not Found exception to be thrown:</p> <ol style="list-style-type: none"> 1. The GreetingStreamFile object as specified by the combination of @CallHandlerObjectId, @GreetingType, and @LanguageCode was not found. The names of the object (Greeting stream file), table (tbl_GreetingStreamFile), and columns (CallHandlerObjectId, GreetingType, and LanguageCode) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_GreetingStreamFile), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.CallHandlerObjectId." If "tbl_GreetingStreamFile.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@GreetingType

Property Name	Value
Description:	The type of greeting (e.g., alternate) to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.GreetingType
Required/Optional Parameter:	Required

Property Name	Value
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.GreetingType." If "tbl_GreetingStreamFile.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.LanguageCode." If "tbl_GreetingStreamFile.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.94. csp_GreetingStreamFileModify

Updates the attributes of a GreetingStreamFile object based on the values passed in via the parameters. The combination of the @CallHandlerObjectId, @GreetingType, and @LanguageCode parameters identify the GreetingStreamFile object that is updated.

The StreamFile object in tbl_StreamFile as specified by @StreamFile is also updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which the stream file belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting (e.g., alternate) to which the stream file belongs.
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Required	@StreamFile	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_GreetingStreamFileModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId, @GreetingType, @StreamFile, and @LanguageCode) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The GreetingStreamFile object as specified by the combination of @CallHandlerObjectId, @GreetingType, and @LanguageCode was not found. The names of the object (Greeting stream file), table (tbl_GreetingStreamFile), and columns (CallHandlerObjectId, GreetingType, and LanguageCode) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.CallHandlerObjectId." If "tbl_GreetingStreamFile.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@GreetingType

Property Name	Value
Description:	The type of greeting (e.g., alternate) to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.GreetingType." If "tbl_GreetingStreamFile.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.LanguageCode." If "tbl_GreetingStreamFile.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StreamFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.95. csp_GreetingStreamFileSet

Creates a new GreetingStreamFile object or updates the attributes of an existing GreetingStreamFile object in tbl_GreetingStreamFile. If the GreetingFileStream object is not found as specified by the combination of the @CallHandlerObjectId, @GreetingType, and @LanguageCode parameters, a new GreetingStreamFile object is created by executing csp_GreetingStreamFileCreate. If a GreetingStreamFile object is found matching the combination of the @CallHandlerObjectId, @GreetingType, and @LanguageCode parameters, it is modified by executing csp_GreetingStreamFileModify.

Additional Information

The parameters @CallHandlerObjectId, @GreetingType, @LanguageCode, and @StreamFile must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which the stream file belongs.
Required	@GreetingType	In	inherit	nvarchar (12 characters)	The type of greeting (e.g., alternate) to which the stream file belongs.
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Required	@StreamFile	In	inherit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_GreetingStreamFileSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that can cause EXCEPTION_PARAMETER_NULL_REQUIRED to be thrown: 1. From csp_GreetingStreamFileCreate: The value of one of the required parameters (@CallHandlerObjectId, @GreetingType, and @LanguageCode) is NULL. The name of the missing parameter is included with the exception message. 2. From csp_GreetingStreamFileModify: The value of one of the required parameters (@CallHandlerObjectId, @GreetingType, @FileName, and @LanguageCode) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	From csp_GreetingStreamFileModify: The GreetingStreamFile object as specified by the combination of @CallHandlerObjectId, @GreetingType, and @LanguageCode was not found. The names of the object (Greeting stream file), table (tbl_GreetingStreamFile), and columns (CallHandlerObjectId, GreetingType, and LanguageCode) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which the stream file belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.CallHandlerObjectId." If "tbl_GreetingStreamFile.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@GreetingType

Property Name	Value
Description:	The type of greeting (e.g., alternate) to which the stream file belongs.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.GreetingType
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	GreetingRuleName
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.GreetingType." If "tbl_GreetingStreamFile.GreetingType" can be NULL, then explicit NULL is allowed.
Default Value:	Standard
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) identifying the language in which this stream was recorded.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_GreetingStreamFile.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_GreetingStreamFile.LanguageCode." If "tbl_GreetingStreamFile.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StreamFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.96. csp_InstalledLanguageCreate

Creates a new InstalledLanguage object by inserting a new row into tbl_InstalledLanguage.

Additional Information

The parameters @LanguageCode and @LanguageType must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which is a 32-bit value defined by Windows that consists of a language ID, a sort ID, and reserved bits. For example, the LCID for US English is 1033.
Required	@LanguageType	In	inherit	int (4 bytes)	The type of language (TUI, GUI, etc.)
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Loaded	In	inherit	smallint (2 bytes)	A flag indicating whether this language is loaded at run time.

Exceptions

csp_InstalledLanguageCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@LanguageCode and @LanguageType) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) which is a 32-bit value defined by Windows that consists of a language ID, a sort ID, and reserved bits. For example, the LCID for US English is 1033.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageCode." If "tbl_InstalledLanguage.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LanguageType

Property Name	Value
Description:	The type of language (TUI, GUI, etc.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.LanguageType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageType
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageType." If "tbl_InstalledLanguage.LanguageType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Loaded

Property Name	Value
Description:	A flag indicating whether this language is loaded at run time.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_InstalledLanguage.Loaded
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.Loaded." If "tbl_InstalledLanguage.Loaded" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.97. csp_InstalledLanguageDelete

Deletes a InstalledLanguage object from tbl_InstalledLanguage as specified by the combination of the @LanguageCode and @LanguageType parameters.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which is a 32-bit value defined by Windows that consists of a language ID, a sort ID, and reserved bits. For example, the LCID for US English is 1033.
Required	@LanguageType	In	inherit	int (4 bytes)	The type of language (TUI, GUI, etc.)
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_InstalledLanguageDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@LanguageCode and @LanguageType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified InstalledLanguage object was not found. The names of the object (InstalledLanguage), table (tbl_InstalledLanguage), and columns (LanguageCode and LanguageType) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_InstalledLanguage), and the column (----) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LanguageCode

Property Name	Value
Description:	The Windows Locale ID (LCID) which is a 32-bit value defined by Windows that consists of a language ID, a sort ID, and reserved bits. For example, the LCID for US English is 1033.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.LanguageCode
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageCode." If "tbl_InstalledLanguage.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LanguageType

Property Name	Value
Description:	The type of language (TUI, GUI, etc.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.LanguageType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageType
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageType." If "tbl_InstalledLanguage.LanguageType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.98. csp_InstalledLanguageModify

Updates the attributes of an InstalledLanguage object based on the values passed in via the parameters. The @LanguageCode and @LanguageType parameters identify the InstalledLanguage object that will be updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@LanguageCode	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which is a 32-bit value defined by Windows that consists of a language ID, a sort ID, and reserved bits. For example, the LCID for US English is 1033.
Required	@LanguageType	In	inherit	int (4 bytes)	The type of language (TUI, GUI, etc.)
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Loaded	In	inherit	smallint (2 bytes)	A flag indicating whether this language is loaded at run time.

Exceptions

csp_InstalledLanguageModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@LanguageCode and @LanguageType) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified InstalledLanguage object was not found. The names of the object (Installed language), table (tbl_InstalledLanguage), and columns (LanguageCode and LanguageType) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageCode." If "tbl_InstalledLanguage.LanguageCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LanguageType

Property Name	Value
Description:	The type of language (TUI, GUI, etc.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.LanguageType
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageType
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.LanguageType." If "tbl_InstalledLanguage.LanguageType" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Loaded

Property Name	Value
Description:	A flag indicating whether this language is loaded at run time.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_InstalledLanguage.Loaded
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_InstalledLanguage.Loaded." If "tbl_InstalledLanguage.Loaded" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.99. csp_InterviewHandlerCreate

Creates a new InterviewHandler object by inserting a new row into tbl_InterviewHandler. This procedure also creates several other objects:

- * The after message action by inserting a new row into tbl_CallAction
- * A new handler by inserting a new row into tbl_Handler
- * Twenty empty interview handler questions by inserting 20 new rows into tbl_InterviewHandlerQuestion
- * If provided, a new DtmfAccessId by inserting a new row into tbl_DtmfAccessId
- * If provided, a new voice name for the interview handler by activating an existing StreamFile object in tbl_StreamFile that was allocated using csp_AllocateVoiceFile.

Additional Information

The parameters @DisplayName and @LocationObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Required	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterMessage_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object where the recorded message of the interview handler should be routed.
Optional	@Recipient_SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object where the recorded message of the interview handler should be routed.
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller is given a choice to mark a message as Urgent or Normal, or if not given the choice, whether the message is always marked Normal (default value) or Urgent.
Optional	@Undeleteable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the interview handler inherit language from location.
Optional	@VoiceName	In	ignore	varchar (40 characters)	Voice file to use for this interview handler (if voice name has already been recorded).

Exceptions

csp_InterviewHandlerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName and @LocationObjectId) is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @Recipient_SubscriberObjectId was not found. Rather the object specified by @Recipient_SubscriberObjectId is a user template. The names of the object (subscriber), parameter (@Recipient_SubscriberObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectID." If "tbl_Handler.LocationObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectID

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectID." If "tbl_Handler.ObjectID" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Recipient_DistributionListObjectID

Property Name	Value
Description:	The unique identifier of the DistributionList object where the recorded message of the interview handler should be routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.Recipient_DistributionListObjectID
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.Recipient_DistributionListObjectId." If "tbl_InterviewHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object where the recorded message of the interview handler should be routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.Recipient_SubscriberObjectId." If "tbl_InterviewHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller is given a choice to mark a message as Urgent or Normal, or if not given the choice, whether the message is always marked Normal (default value) or Urgent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	SendUrgentInterviewMsg
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.SendUrgentMsg." If "tbl_InterviewHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the interview handler inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	Voice file to use for this interview handler (if voice name has already been recorded).
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will accept the new voice file.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

6.100. csp_InterviewHandlerDelete

Deletes an InterviewHandler object from tbl_InterviewHandler as specified by the @ObjectId parameter. This procedure also deletes several objects related to an InterviewHandler object:

- * The parent Handler object is deleted from tbl_Handler. (The FK cascade delete will actually delete the InterviewHandler along with all InterviewHandlerQuestions assigned to the InterviewHandler.)
- * The associated aftermessageaction is deleted from tbl_CallAction.
- * If there is an extension number assigned to the InterviewHandler, the related DtmfAccessId object is deleted from tbl_DtmfAccessId.
- * If the InterviewHandler has a recorded voice name, the related StreamFile object is deleted from tbl_StreamFile by executing csp_StreamFileDelete.

Additional Information

An optional parameter is the @ReplacementInterviewHandler. If passed in, any references to this interview handler will be replaced by this interview handler.

A check is made on the undeletable attribute. If it is set, the procedure will not allow the deletion of the interview handler.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ReplacementInterviewHandlerObjectId	In	ignore	char (36 characters)	Interview handler to use to replace any references to this interview handler before delete.

Exceptions

csp_InterviewHandlerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified InterviewHandler object was not found. The names of the object (Interview handler), table (tbl_InterviewHandler), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_InterviewHandler), and the column (----) are included with the exception message. The active transaction is rolled back.
1016	EXCEPTION_OBJECT_UNDELETABLE	The InterviewHandler specified by @ObjectId cannot be deleted because it's Undeletable attribute is set. The names of the object (Interview handler) and table (tbl_Handler),are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ReplacementInterviewHandlerObjectId

Property Name	Value
Description:	Interview handler to use to replace any references to this interview handler before delete.
Notes:	Optional. By default, references will be changed to go to the opening greeting.
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.101. csp_InterviewHandlerModify

Updates the attributes of an InterviewHandler object based on the values passed in via the parameters. The @ObjectId parameter identifies the InterviewHandler object that will be updated. This procedure will also update the AfterMessageAction, DtmfAccessId and VoiceName, if the parameters are passed in. See notes for additional information.

Additional Information

If @DtmfAccessId is passed in and contains a value other than the 'special default' or NULL:

- * If the InterviewHandler does not already have a DtmfAccessId, a new DtmfAccessId object is created.
- * If the InterviewHandler already has a DtmfAccessId, the value of the DtmfAccessId is updated.
- * If @DtmfAccess is set to NULL and the InterviewHandler has an DtmfAccessId, the existing DtmfAccessId object belonging to the specified InterviewHandler is deleted.

If @VoiceName is passed in and contains a value other than the 'special default' :

- * If the InterviewHandler does not already have a VoiceName, a new StreamFile object is created.
- * If the InterviewHandler already has a VoiceName, the value of the VoiceName is updated.
- * If @VoiceName is set to NULL and the InterviewHandler has an existing VoiceName, the existing StreamFile object belonging to the specified InterviewHandler is deleted.

If the Undeletable flag is set for this object in the database, it will remain set. Once an object is set to undeletable it should stay that way.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Optional	@AfterMessage_Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AfterMessage_Target Conversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@AfterMessage_Target HandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.
Optional	@Language	In	inherit	int (4 bytes)	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Optional	@LocationObjectId	In	inherit	char (36 characters)	The unique identifier of the Location object to which this handler belongs.
Optional	@Recipient_DistributionListObjectId	In	inherit	char (36 characters)	The unique identifier of the DistributionList object where the recorded message of the interview handler should be routed.
Optional	@Recipient_SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object where the recorded message of the interview handler should be routed.
Optional	@SendUrgentMsg	In	inherit	smallint (2 bytes)	A flag indicating whether an unidentified caller is given a choice to mark a message as Urgent or Normal, or if not given the choice, whether the message is always marked Normal (default value) or Urgent.
Optional	@Undeetable	In	inherit	smallint (2 bytes)	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Optional	@UseCallLanguage	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Optional	@UseDefaultLanguage	In	ignore	smallint (2 bytes)	Set this to 1 to have the interview handler inherit language from location.
Optional	@VoiceName	In	explicit	varchar (40 characters)	New voice file to use for this interview handler.

Exceptions

csp_InterviewHandlerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified InterviewHandler object was not found. The names of the object (Interview handler), paramter (@Objectid), table (tbl_InterviewHandler), and column (ObjectId) are included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	A valid subscriber object as specified by @Recipient_SubscriberObjectId was not found. Rather the object specified by @Recipient_SubscriberObjectId is a user template. The names of the object (subscriber), parameter (@Recipient_SubscriberObjectId), view (vw_Subscriber), and column (ObjectId) are included with the exception message.

Parameter Properties

@AfterMessage_Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AfterMessage_TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The text name of the handler to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, the display name for the default opening greeting call handler is "Opening Greeting."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.DisplayName." If "tbl_Handler.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Language

Property Name	Value
Description:	The Windows Locale ID (LCID) which identifies the language that Cisco Unity Connection plays the handler system prompts.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Language
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Language." If "tbl_Handler.Language" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@LocationObjectId

Property Name	Value
Description:	The unique identifier of the Location object to which this handler belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.LocationObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.LocationObjectId." If "tbl_Handler.LocationObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Handler object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.ObjectId." If "tbl_Handler.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Recipient_DistributionListObjectId

Property Name	Value
Description:	The unique identifier of the DistributionList object where the recorded message of the interview handler should be routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.Recipient_DistributionListObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.Recipient_DistributionListObjectId." If "tbl_InterviewHandler.Recipient_DistributionListObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Recipient_SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object where the recorded message of the interview handler should be routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.Recipient_SubscriberObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.Recipient_SubscriberObjectId." If "tbl_InterviewHandler.Recipient_SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SendUrgentMsg

Property Name	Value
Description:	A flag indicating whether an unidentified caller is given a choice to mark a message as Urgent or Normal, or if not given the choice, whether the message is always marked Normal (default value) or Urgent.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewHandler.SendUrgentMsg
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SendUrgentInterviewMsg
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewHandler.SendUrgentMsg." If "tbl_InterviewHandler.SendUrgentMsg" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Undeletable

Property Name	Value
Description:	A flag indicating whether this handler can be deleted via an administrative application such as Cisco Unity Connection Administration. It is used to prevent deletion of factory defaults.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.Undeletable
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.Undeletable." If "tbl_Handler.Undeletable" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@UseCallLanguage

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will use the language assigned to the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Handler.UseCallLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_Handler.UseCallLanguage." If "tbl_Handler.UseCallLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@UseDefaultLanguage

Property Name	Value
Description:	Set this to 1 to have the interview handler inherit language from location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@VoiceName

Property Name	Value
Description:	New voice file to use for this interview handler.
Notes:	A new voice name can be requested using csp_AllocateVoiceFile. After recording is complete, passing it in here will remove the existing voice file and accept the new voice file.

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.102. csp_InterviewHandlerQuestionModify

Updates the attributes of an InterviewHandlerQuestion object based on the values passed in via the parameters. The combination of the @InterviewHandlerObjectId and @QuestionNumber parameters identify the InterviewHandlerQuestion object that will be updated. This procedure will also update the VoiceFile (StreamFile object), if the parameter @VoiceFile is passed in.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@InterviewHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the InterviewHandler object to which this interview question belongs.
Required	@QuestionNumber	In	inherit	smallint (2 bytes)	The interview question number. Questions are numbered from 1 to 20.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsActive	In	inherit	smallint (2 bytes)	A flag indicating whether the question is used.
Optional	@MaxMsgLength	In	inherit	smallint (2 bytes)	The maximum recording length (in seconds) allowed for caller responses to the question.
Optional	@StreamText	In	inherit	lvarchar (256 characters)	The complete text of the question used for display purposes.
Optional	@VoiceFile	In	explicit	varchar (40 characters)	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.

Exceptions

csp_InterviewHandlerQuestionModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@InterviewHandlerObjectId and @QuestionNumber) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified InterviewHandlerQuestion object was not found. The names of the object (Interview handler question), table (tbl_InterviewHandlerQuestion), and columns (InterviewHandlerObjectId and QuestionNumber) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@InterviewHandlerObjectId

Property Name	Value
Description:	The unique identifier of the InterviewHandler object to which this interview question belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewQuestion.InterviewHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewQuestion.InterviewHandlerObjectId." If "tbl_InterviewQuestion.InterviewHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IsActive

Property Name	Value
Description:	A flag indicating whether the question is used.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewQuestion.IsActive
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewQuestion.IsActive." If "tbl_InterviewQuestion.IsActive" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@MaxMsgLength

Property Name	Value
Description:	The maximum recording length (in seconds) allowed for caller responses to the question.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewQuestion.MaxMsgLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewQuestion.MaxMsgLength." If "tbl_InterviewQuestion.MaxMsgLength" can be NULL, then explicit NULL is allowed.
Default Value:	30
Direction:	In
Update Column Value From Parameter:	True

@QuestionNumber

Property Name	Value
Description:	The interview question number. Questions are numbered from 1 to 20.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewQuestion.QuestionNumber
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewQuestion.QuestionNumber." If "tbl_InterviewQuestion.QuestionNumber" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@StreamText

Property Name	Value
Description:	The complete text of the question used for display purposes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_InterviewQuestion.StreamText
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_InterviewQuestion.StreamText." If "tbl_InterviewQuestion.StreamText" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@VoiceFile

Property Name	Value
Description:	The name of the WAV file containing the recorded audio (voice name, greeting, etc.) for the parent object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.103. csp_IpAddressAccessListCreate

Create an entry in the access list that will allow or deny connections for the SMTP servers on this system from a single address or group of addresses.

Additional Information

The address field can be any valid IPv4 or IPv6 address. It can also be any such address in CIDR format.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Address	In	inherit	varchar (40 characters)	Either the IP address for a single machine, a subnet address for a group of machines, or all addresses in the IPv4 address range (signified by "*"). The address may be in the format of IPv4, IPv4 CIDR (Classless Inter-Domain Routing) , or an asterisk ("*") character which means all IP addresses in the IPv4 range.
Required	@SmtpServerObjectId	In	inherit	char (36 characters)	The unique identifier of the SMTPServer to which this IP address belongs. A Foreign Key to tbl_SmtpServer.ObjectId.
Optional	@AllowConnection	In	inherit	smallint (2 bytes)	A flag indicating whether the SMTP server to which this row belongs, will allow or deny connections from this IP address/group of IP addresses. Values: 0: Deny connections from this IP address/group of IP addresses 1: Allow connections from this IP address/group of IP addresses (default)
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.

Exceptions

csp_IpAddressAccessListCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@Address

Property Name	Value
Description:	Either the IP address for a single machine, a subnet address for a group of machines, or all addresses in the IPv4 address range (signified by "*"). The address may be in the format of IPv4, IPv4 CIDR (Classless Inter-Domain Routing) , or an asterisk ("*") character which means all IP addresses in the IPv4 range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.Address
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.Address." If "tbl_IpAddressAccessList.Address" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AllowConnection

Property Name	Value
Description:	A flag indicating whether the SMTP server to which this row belongs, will allow or deny connections from this IP address/group of IP addresses. Values: 0: Deny connections from this IP address/group of IP addresses 1: Allow connections from this IP address/group of IP addresses (default)
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.AllowConnection
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.AllowConnection." If "tbl_IpAddressAccessList.AllowConnection" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.ObjectId." If "tbl_IpAddressAccessList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@SmtpServerObjectId

Property Name	Value
Description:	The unique identifier of the SMTPServer to which this IP address belongs. A Foreign Key to tbl_SmtpServer.ObjectId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.SmtpServerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.SmtpServerObjectId." If "tbl_IpAddressAccessList.SmtpServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.104. csp_IpAddressAccessListDelete

Remove an entry for the access list.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_IpAddressAccessListDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.ObjectId." If "tbl_IpAddressAccessList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.105. csp_IpAddressAccessListModify

Modify an entry in the access list that will allow or deny connections for the SMTP servers on this system from a single address or group of addresses.

Additional Information

The address field can be any valid IPv4 or IPv6 address. It can also be any such address in CIDR format.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.
Optional	@Address	In	inherit	varchar (40 characters)	Either the IP address for a single machine, a subnet address for a group of machines, or all addresses in the IPv4 address range (signified by "*"). The address may be in the format of IPv4, IPv4 CIDR (Classless Inter-Domain Routing) , or an asterisk ("*") character which means all IP addresses in the IPv4 range.
Optional	@AllowConnection	In	inherit	smallint (2 bytes)	A flag indicating whether the SMTP server to which this row belongs, will allow or deny connections from this IP address/group of IP addresses. Values: 0: Deny connections from this IP address/group of IP addresses 1: Allow connections from this IP address/group of IP addresses (default)
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@SmtpServerObjectId	In	inherit	char (36 characters)	The unique identifier of the SMTPServer to which this IP address belongs. A Foreign Key to tbl_SmtpServer.ObjectId.

Exceptions

csp_IpAddressAccessListModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@Address

Property Name	Value
Description:	Either the IP address for a single machine, a subnet address for a group of machines, or all addresses in the IPv4 address range (signified by "*"). The address may be in the format of IPv4, IPv4 CIDR (Classless Inter-Domain Routing) , or an asterisk ("*") character which means all IP addresses in the IPv4 range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.Address
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)

Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPAddressRestriction object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.ObjectId." If "tbl_IpAddressAccessList.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtpServerObjectId

Property Name	Value
Description:	The unique identifier of the SMTPServer to which this IP address belongs. A Foreign Key to tbl_SmtpServer.ObjectId.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IpAddressAccessList.SmtpServerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_IpAddressAccessList.SmtpServerObjectId." If "tbl_IpAddressAccessList.SmtpServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.106. csp_IPPortReservation_GetNextAvailablePort

Retrieves the next available IpPort from the range(s) reserved

Additional Information

The parameters @IpPortPurposeEnum and @VmsServerObjectId must be provided. Called by csp_MediaPortGroupIPPortCreate. Not called directly by clients.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@IpPortPurposeEnum	In	inherit	smallint (2 bytes)	The purpose for which this IP port is used.
Required	@VmsServerObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSServer object on which this IP port is located.
Optional	@IpPort	Out	ignore	int (4 bytes)	

Exceptions

csp_IPPortReservation_GetNextAvailablePort will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@IpPortPurposeEnum and @VmsServerObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	An available IP Port for the type of integration as specified by @IpPortPurposeEnum was not found. The names of the object (IP port), table (tbl_IPPortReservation), and columns (MinIpPort, MaxIpPort) are included with the exception message.

Parameter Properties

@IpPort

Property Name	Value
Description:	
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@IpPortPurposeEnum

Property Name	Value
Description:	The purpose for which this IP port is used.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.IpPortPurposeEnum
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	IPPortPurpose
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.IpPortPurposeEnum." If "tbl_MediaPortGroupIPPort.IpPortPurposeEnum" can be NULL, then explicit NULL is allowed.
Default Value:	500
Direction:	In
Update Column Value From Parameter:	False

@VmsServerObjectId

Property Name	Value
Description:	The unique identifier of the VMSServer object on which this IP port is located.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.VmsServerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.VmsServerObjectId." If "tbl_MediaPortGroupIPPort.VmsServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.107. csp_IPPortReservationCreate

Creates a new IPPortReservation object by inserting a new row into tbl_IPPortReservation. A IPPortReservation object consists of a range of IP ports that are reserved for specific purposes such as reserving IP ports 5060-5300 for SIP.

Additional Information

The parameters @Purpose, @MinIPPort and @MaxIPPort must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MaxIPPort	In	inherit	int (4 bytes)	The upper boundary of the IP port range.
Required	@MinIPPort	In	inherit	int (4 bytes)	The lower boundary of the IP port range.
Required	@Purpose	In	inherit	smallint (2 bytes)	The purpose for which ports in this range can be used.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.
Optional	@VmsServerObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSServer object to which this range applies.

Exceptions

csp_IPPortReservationCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Purpose, @Min, and @Max) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxIPPort

Property Name	Value
Description:	The upper boundary of the IP port range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.MaxIPPort
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.MaxIPPort." If "tbl_IPPortReservation.MaxIPPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MinIPPort

Property Name	Value
Description:	The lower boundary of the IP port range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.MinIPPort
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.MinIPPort." If "tbl_IPPortReservation.MinIPPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.ObjectId." If "tbl_IPPortReservation.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Purpose

Property Name	Value
Description:	The purpose for which ports in this range can be used.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.Purpose
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	IPPortPurpose
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.Purpose." If "tbl_IPPortReservation.Purpose" can be NULL, then explicit NULL is allowed.
Default Value:	500
Direction:	In
Update Column Value From Parameter:	True

@VmsServerObjectId

Property Name	Value
Description:	The unique identifier of the VMSServer object to which this range applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.VmsServerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.VmsServerObjectId." If "tbl_IPPortReservation.VmsServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.108. csp_IPPortReservationDelete

Deletes a IPPortReservation object from tbl_IPPortReservation as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_IPPortReservationDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified IPPortReservation object was not found. The names of the object (IP port reservation), table (tbl_IPPortReservation), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_IPPortReservation), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.ObjectId." If "tbl_IPPortReservation.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.109. csp_IPPortReservationModify

Updates the attributes of a IPPortReservation object based on the values passed in via the parameters. The @ObjectId parameter identifies the IPPortReservation object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MaxIPPort	In	inherit	int (4 bytes)	The upper boundary of the IP port range.
Optional	@MinIPPort	In	inherit	int (4 bytes)	The lower boundary of the IP port range.
Optional	@Purpose	In	inherit	smallint (2 bytes)	The purpose for which ports in this range can be used.
Optional	@VmsServerObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSServer object to which this range applies.

Exceptions

csp_IPPortReservationModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified IPPortReservation object was not found. The names of the object (IP port reservation), table (tbl_IPPortReservation), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxIPPort

Property Name	Value
Description:	The upper boundary of the IP port range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.MaxIPPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.MaxIPPort." If "tbl_IPPortReservation.MaxIPPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MiniIPPort

Property Name	Value
Description:	The lower boundary of the IP port range.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.MinIPPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.MinIPPort." If "tbl_IPPortReservation.MinIPPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a IPPortReservation object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.ObjectId." If "tbl_IPPortReservation.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Purpose

Property Name	Value
Description:	The purpose for which ports in this range can be used.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.Purpose
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	IPPortPurpose
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.Purpose." If "tbl_IPPortReservation.Purpose" can be NULL, then explicit NULL is allowed.
Default Value:	500
Direction:	In
Update Column Value From Parameter:	True

@VmsServerObjectId

Property Name	Value
Description:	The unique identifier of the VMSServer object to which this range applies.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_IPPortReservation.VmsServerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_IPPortReservation.VmsServerObjectId." If "tbl_IPPortReservation.VmsServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.110. csp_LicenseFileStatusCreate

Creates a new LicenseFileStatus object by inserting a new row into tbl_LicenseFileStatus.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FileName	In	inherit	varchar (64 characters)	Name of the license file (not including path).
Required	@Summary	In	inherit	varchar (254 characters)	The reason the install of the file failed (if any).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Installed	In	inherit	smallint (2 bytes)	Indicates if license file is installed.

Exceptions

csp_LicenseFileStatusCreate does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FileName

Property Name	Value
Description:	Name of the license file (not including path).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.FileName." If "tbl_LicenseFileStatus.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Installed

Property Name	Value
Description:	Indicates if license file is installed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.Installed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.Installed." If "tbl_LicenseFileStatus.Installed" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Summary

Property Name	Value
Description:	The reason the install of the file failed (if any).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.Summary
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.Summary." If "tbl_LicenseFileStatus.Summary" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.111. csp_LicenseFileStatusDelete

Deletes a LicenseFileStatus object from tbl_LicenseFileStatus as specified by the @FileName parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FileName	In	inherit	varchar (64 characters)	Name of the license file (not including path).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_LicenseFileStatusDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameter (@FileName) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FileName

Property Name	Value
Description:	Name of the license file (not including path).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.FileName." If "tbl_LicenseFileStatus.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

6.112. csp_LicenseFileStatusModify

Updates the attributes of a LicenseFileStatus object based on the values passed in via the parameters. The @FileName parameter identifies the LicenseFileStatus object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FileName	In	inherit	varchar (64 characters)	Name of the license file (not including path).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@Installed	In	inherit	smallint (2 bytes)	Indicates if license file is installed.
Optional	@Summary	In	inherit	varchar (254 characters)	The reason the install of the file failed (if any).

Exceptions

csp_LicenseFileStatusModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameter (@FileName) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FileName

Property Name	Value
Description:	Name of the license file (not including path).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.FileName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.FileName." If "tbl_LicenseFileStatus.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Installed

Property Name	Value
Description:	Indicates if license file is installed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.Installed
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.Installed." If "tbl_LicenseFileStatus.Installed" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Summary

Property Name	Value
Description:	The reason the install of the file failed (if any).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseFileStatus.Summary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseFileStatus.Summary." If "tbl_LicenseFileStatus.Summary" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

6.113. csp_LicenseStatusCreate

Creates a new LicenseStatus object by inserting a new row into tbl_LicenseStatus.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TagName	In	inherit	varchar (64 characters)	The tag or feature name.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ComplianceTime	In	inherit	datetime (8 bytes)	The last time when this feature was compliant.
Optional	@ComplianceType	In	inherit	int (4 bytes)	Type of license evaluation for compliance.
Optional	@LastRestartTime	In	inherit	datetime (8 bytes)	The time when the process related to the feature was last restarted.
Optional	@Limit	In	inherit	int (4 bytes)	The limit on the feature as set by the license files. It is a number specifying the count or the enabled/disabled state of the feature.
Optional	@NextExpiryTime	In	inherit	datetime (8 bytes)	The next expiry time for this feature as per the license tags for this feature.
Optional	@Overdraft	In	inherit	int (4 bytes)	Overdraft.
Optional	@RestartLimit	In	inherit	int (4 bytes)	The limit which will be effective after the process related to the feature is restarted.
Optional	@Status	In	inherit	int (4 bytes)	The status value of this license feature.
Optional	@Usage	In	inherit	int (4 bytes)	The current usage of the feature in the system. It is a number specifying the current usage count or if the feature is in use.

Exceptions

csp_LicenseStatusCreate does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ComplianceTime

Property Name	Value
Description:	The last time when this feature was compliant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.ComplianceTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.ComplianceTime." If "tbl_LicenseStatus.ComplianceTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ComplianceType

Property Name	Value
Description:	Type of license evaluation for compliance.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.ComplianceType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseComplianceType
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.ComplianceType." If "tbl_LicenseStatus.ComplianceType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastRestartTime

Property Name	Value
Description:	The time when the process related to the feature was last restarted.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_LicenseStatus.LastRestartTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.LastRestartTime." If "tbl_LicenseStatus.LastRestartTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Limit

Property Name	Value
Description:	The limit on the feature as set by the license files. It is a number specifying the count or the enabled/disabled state of the feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Limit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Limit." If "tbl_LicenseStatus.Limit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NextExpiryTime

Property Name	Value
Description:	The next expiry time for this feature as per the license tags for this feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.NextExpiryTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.NextExpiryTime." If "tbl_LicenseStatus.NextExpiryTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Overdraft

Property Name	Value
Description:	Overdraft.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Overdraft
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Overdraft." If "tbl_LicenseStatus.Overdraft" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RestartLimit

Property Name	Value
Description:	The limit which will be effective after the process related to the feature is restarted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.RestartLimit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.RestartLimit." If "tbl_LicenseStatus.RestartLimit" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@Status

Property Name	Value
Description:	The status value of this license feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Status
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseStatus
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Status." If "tbl_LicenseStatus.Status" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TagName

Property Name	Value
Description:	The tag or feature name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.TagName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.TagName." If "tbl_LicenseStatus.TagName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Usage

Property Name	Value
Description:	The current usage of the feature in the system. It is a number specifying the current usage count or 1 if the feature is in use.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Usage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Usage." If "tbl_LicenseStatus.Usage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.114. csp_LicenseStatusDelete

Deletes a LicenseStatus object from tbl_LicenseStatus as specified by the @TagName parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TagName	In	inherit	varchar (64 characters)	The tag or feature name.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_LicenseStatusDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameter (@TagName) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TagName

Property Name	Value
Description:	The tag or feature name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.TagName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.TagName." If "tbl_LicenseStatus.TagName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

6.115. csp_LicenseStatusModify

Updates the attributes of a LicenseStatus object based on the values passed in via the parameters. The @TagName parameter identifies the LicenseStatus object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@TagName	In	inherit	varchar (64 characters)	The tag or feature name.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ComplianceTime	In	inherit	datetime (8 bytes)	The last time when this feature was compliant.
Optional	@ComplianceType	In	inherit	int (4 bytes)	Type of license evaluation for compliance.
Optional	@LastRestartTime	In	inherit	datetime (8 bytes)	The time when the process related to the feature was last restarted.
Optional	@Limit	In	inherit	int (4 bytes)	The limit on the feature as set by the license files. It is a number specifying the count or the enabled/disabled state of the feature.
Optional	@NextExpiryTime	In	inherit	datetime (8 bytes)	The next expiry time for this feature as per the license tags for this feature.
Optional	@Overdraft	In	inherit	int (4 bytes)	Overdraft.
Optional	@RestartLimit	In	inherit	int (4 bytes)	The limit which will be effective after the process related to the feature is restarted.
Optional	@Status	In	inherit	int (4 bytes)	The status value of this license feature.
Optional	@Usage	In	inherit	int (4 bytes)	The current usage of the feature in the system. It is a number specifying the current usage count or if the feature is in use.

Exceptions

csp_LicenseStatusModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameter (@TagName) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ComplianceTime

Property Name	Value
Description:	The last time when this feature was compliant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.ComplianceTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.ComplianceTime." If "tbl_LicenseStatus.ComplianceTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ComplianceType

Property Name	Value
Description:	Type of license evaluation for compliance.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.ComplianceType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseComplianceType
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.ComplianceType." If "tbl_LicenseStatus.ComplianceType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LastRestartTime

Property Name	Value
Description:	The time when the process related to the feature was last restarted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.LastRestartTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.LastRestartTime." If "tbl_LicenseStatus.LastRestartTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Limit

Property Name	Value
Description:	The limit on the feature as set by the license files. It is a number specifying the count or the enabled/disabled state of the feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Limit
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Limit." If "tbl_LicenseStatus.Limit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@NextExpiryTime

Property Name	Value
Description:	The next expiry time for this feature as per the license tags for this feature.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.NextExpiryTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.NextExpiryTime." If "tbl_LicenseStatus.NextExpiryTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Overdraft

Property Name	Value
Description:	Overdraft.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Overdraft
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Overdraft." If "tbl_LicenseStatus.Overdraft" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RestartLimit

Property Name	Value
Description:	The limit which will be effective after the process related to the feature is restarted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.RestartLimit

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.RestartLimit." If "tbl_LicenseStatus.RestartLimit" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Status

Property Name	Value
Description:	The status value of this license feature.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Status
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseStatus
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Status." If "tbl_LicenseStatus.Status" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TagName

Property Name	Value
Description:	The tag or feature name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.TagName
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.TagName." If "tbl_LicenseStatus.TagName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Usage

Property Name	Value
Description:	The current usage of the feature in the system. It is a number specifying the current usage count or if the feature is in use.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LicenseStatus.Usage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LicenseStatus.Usage." If "tbl_LicenseStatus.Usage" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.116. csp_LocationDelete

Deletes a Location object from tbl_Location as specified by the @ObjectId parameter.

Additional Information

If a DtmfAccessId object exists in tbl_DtmfAccessId for this location, this procedure will delete the DtmfAccessId object from tbl_DtmfAccessId.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Location object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_LocationDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The Location object for the specified @ObjectId was not found. The names of the object (Location), table (tbl_Location), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Location), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Location object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Location.ObjectId." If "tbl_Location.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.117. csp_LocationVMSCreate

Creates a new LocationVMS object by inserting a new row into tbl_LocationVMS. A corresponding base Location object is also created in tbl_Location by executing csp_LocationCreate.

Additional Information

The parameters @DisplayName and @SmtpDomain must be provided.

The value of @DefaultWaveFormatObjectId is set to the well-known GUID of the 8K PCM u-Law WaveFormat object.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Required	@SmtpDomain	In	inherit	varchar (255 characters)	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtpAddress).
Optional	@AddressingMaxScope	In	inherit	smallint (2 bytes)	The scope (e.g., local VMS, dialing domain, entire Unity organization) of the search that Cisco Unity Connection performs when searching for a matching extension in the following cases: <ul style="list-style-type: none"> * When a subscriber addresses a message by using the phone. * When subscribers add members to private lists by using the phone or the Cisco Unity Connection Assistant. * When an administrator adds members to system or personal distribution lists by using the Cisco Unity Connection Administration. * When Cisco Unity Connection looks up the recipient for an incoming AMIS message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AgcTargetDb	In	inherit	smallint (2 bytes)	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Optional	@AllowBlindAddressing	In	inherit	smallint (2 bytes)	A flag indicating whether messages can be addressed to this location without an existing handler or subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BlindAddressingMaxScope	In	inherit	smallint (2 bytes)	The scope (e.g., none, local VMS server, dialing domain, entire Unity organization) of the blind addressing search for a matching delivery location that Cisco Unity Connection performs when a subscriber addresses a message by using the phone.
Optional	@DefaultLanguage	In	inherit	int (4 bytes)	Default language for subscribers and call handlers.
Optional	@DefaultTTSLanguage	In	inherit	int (4 bytes)	Default language to use for TTS playback.
Optional	@DefaultWaveFormatObjectId	In	inherit	char (36 characters)	The unique identifier of the WaveFormat object that specifies the wave format in which recorded messages are stored if the requested format is not available on the system.
Optional	@DialingDomainName	In	inherit	nvarchar (40 characters)	The name of the dialing domain of which this location is a member.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@IncludeLocations	In	inherit	smallint (2 bytes)	A flag indicating whether locations are included in searches. If set on the LocationVMS, the conversation will include locations in the search results.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this location object is the "primary" location, which cannot be deleted. (Used to prevent deletion of factory defaults.)

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@KeypadMapId	In	inherit	smallint (2 bytes)	The keypad map used by this location. The keypad map specifies the numeric keys to which the letters Q and Z are assigned to on the phone. This is specified during Cisco Unity Connection setup.
Optional	@LastLicenseEvalTime	In	inherit	datetime (8 bytes)	The last time the license evaluation was done.
Optional	@LocalPhonePrefix	In	inherit	nvarchar (64 characters)	<p>The number that is used to construct addresses for Cisco Unity Connection subscribers who send messages to individuals who use the voice messaging system that corresponds to this delivery location.</p> <p>On outgoing messages from Cisco Unity Connection subscribers to subscribers at this VPIM location, the prefix is added to the beginning of the sender mailbox number to form the From address.</p> <p>On incoming messages to Cisco Unity Connection subscribers from subscribers at this VPIM location, the prefix is removed from the beginning of the recipient mailbox number to form the To address.</p>
Optional	@MaxContacts	In	inherit	int (4 bytes)	The maximum number of contacts that can be created for this location.
Optional	@MaxGreetingLength	In	inherit	int (4 bytes)	The maximum length (in seconds) allowed for recording a system greeting.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a LocationVMS object.
Optional	@OverallLicenseState	In	inherit	int (4 bytes)	Specifies the overall license state. It is valid if none of the license feature is in shutdown state. When this state becomes shutdown, the application will be shutdown.
Optional	@SkinnyLocalCACertificate	In	inherit	lvarchar (8000 characters)	The X.509 certificate formatted as a PEM format string (base-64 encoded).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SkinnyLocalCACertificateFileName	In	inherit	nvarchar (40 characters)	The file name that should be assigned to the SkinnyLocalCACertificate to install the certificate on the Cisco Unified Communications Manager server(s). Installing the certificate on the CCM servers causes CCM to trust any Skinny device certificates signed by it, which is what we need to establish TLS Skinny connections to the CCM servers in the cluster.
Optional	@SkinnyLocalCAPrivateKey	In	inherit	lvarchar (8000 characters)	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Optional	@SmtpSmartHost	In	inherit	varchar (40 characters)	IP address or host name of SMTP smart host.
Optional	@TimeZone	In	inherit	int (4 bytes)	The TimeZone associated with this VMS.
Optional	@TransferDialString	In	inherit	nvarchar (128 characters)	The phone number that a local Cisco Unity Connection VMS server dials to transfer a call to this Cisco Unity Connection VMS server.
Optional	@TransferNumberOfRings	In	inherit	int (4 bytes)	The number of rings the local Cisco Unity Connection VMS server waits for this Cisco Unity Connection VMS server to answer. If this Cisco Unity Connection VMS server does not answer after the specified number of rings, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransferTimeout	In	inherit	int (4 bytes)	The amount of time (in milliseconds) the local Cisco Unity Connection VMS server will wait for a response from this Cisco Unity Connection VMS server after this Cisco Unity Connection VMS server has answered the call. If this VMS server does not respond within the specified time period, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Optional	@VoiceName	In	inherit	varchar (40 characters)	Voice file to use for this location's voice name.

Exceptions

csp_LocationVMSCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DisplayName and @SmtptDomain) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AddressingMaxScope

Property Name	Value
Description:	<p>The scope (e.g., local VMS, dialing domain, entire Unity organization) of the search that Cisco Unity Connection performs when searching for a matching extension in the following cases:</p> <ul style="list-style-type: none"> * When a subscriber addresses a message by using the phone. * When subscribers add members to private lists by using the phone or the Cisco Unity Connection Assistant. * When an administrator adds members to system or personal distribution lists by using the Cisco Unity Connection Administration. * When Cisco Unity Connection looks up the recipient for an incoming AMIS message.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AddressingMaxScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressingMaxScope
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AddressingMaxScope." If "tbl_LocationVMS.AddressingMaxScope" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AgcTargetDb

Property Name	Value
Description:	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AgcTargetDb
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AgcTargetDb." If "tbl_LocationVMS.AgcTargetDb" can be NULL, then explicit NULL is allowed.
Default Value:	-26
Direction:	In
Update Column Value From Parameter:	True

@AllowBlindAddressing

Property Name	Value
Description:	A flag indicating whether messages can be addressed to this location without an existing handler or subscriber.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AllowBlindAddressing
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AllowBlindAddressing." If "tbl_LocationVMS.AllowBlindAddressing" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BlindAddressingMaxScope

Property Name	Value
Description:	The scope (e.g., none, local VMS server, dialing domain, entire Unity organization) of the blind addressing search for a matching delivery location that Cisco Unity Connection performs when a subscriber addresses a message by using the phone.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.BlindAddressingMaxScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	BlindAddressingMaxScope
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.BlindAddressingMaxScope." If "tbl_LocationVMS.BlindAddressingMaxScope" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DefaultLanguage

Property Name	Value
Description:	Default language for subscribers and call handlers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.DefaultLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultLanguage." If "tbl_LocationVMS.DefaultLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1033
Direction:	In
Update Column Value From Parameter:	True

@DefaultTTSLanguage

Property Name	Value
Description:	Default language to use for TTS playback.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.DefaultTTSLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultTTSLanguage." If "tbl_LocationVMS.DefaultTTSLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1033
Direction:	In
Update Column Value From Parameter:	True

@DefaultWaveFormatObjectId

Property Name	Value
Description:	The unique identifier of the WaveFormat object that specifies the wave format in which recorded messages are stored if the requested format is not available on the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.DefaultWaveFormatObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultWaveFormatObjectId." If "tbl_LocationVMS.DefaultWaveFormatObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	'8961a48d-085d-4023-a4b4-6f682f8a8578'
Direction:	In
Update Column Value From Parameter:	True

@DialingDomainName

Property Name	Value
Description:	The name of the dialing domain of which this location is a member.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DialingDomainName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DialingDomainName." If "tbl_Location.DialingDomainName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DisplayName." If "tbl_Location.DisplayName" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	A DtmfAccessId (extension) is optional. This will be used when multiple locations are allowed such as in K2.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IncludeLocations

Property Name	Value
Description:	A flag indicating whether locations are included in searches. If set on the LocationVMS, the conversation will include locations in the search results.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.IncludeLocations
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.IncludeLocations." If "tbl_LocationVMS.IncludeLocations" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this location object is the "primary" location, which cannot be deleted. (Used to prevent deletion of factory defaults.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.IsPrimary." If "tbl_LocationVMS.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@KeypadMapId

Property Name	Value
Description:	The keypad map used by this location. The keypad map specifies the numeric keys to which the letters Q and Z are assigned to on the phone. This is specified during Cisco Unity Connection setup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.KeypadMapId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	KeypadMap
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.KeypadMapId." If "tbl_LocationVMS.KeypadMapId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LastLicenseEvalTime

Property Name	Value
Description:	The last time the license evaluation was done.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.LastLicenseEvalTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.LastLicenseEvalTime." If "tbl_LocationVMS.LastLicenseEvalTime" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocalPhonePrefix

Property Name	Value
Description:	<p>The number that is used to construct addresses for Cisco Unity Connection subscribers who send messages to individuals who use the voice messaging system that corresponds to this delivery location.</p> <p>On outgoing messages from Cisco Unity Connection subscribes to subscribers at this VPIM location, the prefix is added to the beginning of the sender mailbox number to form the From address.</p> <p>On incoming messages to Cisco Unity Connection subscribers from subscribers at this VPIM location, the prefix is removed from the beginning of the recipient mailbox number to form the To address.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.LocalPhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.LocalPhonePrefix." If "tbl_LocationVMS.LocalPhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@MaxContacts

Property Name	Value
Description:	The maximum number of contacts that can be created for this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.MaxContacts
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.MaxContacts." If "tbl_LocationVMS.MaxContacts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MaxGreetingLength

Property Name	Value
Description:	The maximum length (in seconds) allowed for recording a system greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.MaxGreetingLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.MaxGreetingLength." If "tbl_LocationVMS.MaxGreetingLength" can be NULL, then explicit NULL is allowed.
Default Value:	90
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a LocationVMS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.ObjectId." If "tbl_LocationVMS.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@OverallLicenseState

Property Name	Value
Description:	Specifies the overall license state. It is valid if none of the license feature is in shutdown state. When this state becomes shutdown, the application will be shutdown.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.OverallLicenseState
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseStatus
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.OverallLicenseState." If "tbl_LocationVMS.OverallLicenseState" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCACertificate

Property Name	Value
Description:	The X.509 certificate formatted as a PEM format string (base-64 encoded).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCACertificate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCACertificate." If "tbl_LocationVMS.SkinnyLocalCACertificate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCACertificateFileName

Property Name	Value
Description:	The file name that should be assigned to the SkinnyLocalCACertificate to install the certificate on the Cisco Unified Communications Manager server(s). Installing the certificate on the CCM servers causes CCM to trust any Skinny device certificates signed by it, which is what we need to establish TLS Skinny connections to the CCM servers in the cluster.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCACertificateFileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCACertificateFileName." If "tbl_LocationVMS.SkinnyLocalCACertificateFileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCAPrivateKey

Property Name	Value
Description:	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCAPrivateKey
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCAPrivateKey." If "tbl_LocationVMS.SkinnyLocalCAPrivateKey" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SmtDomain

Property Name	Value
Description:	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.SmtDomain
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.SmtDomain." If "tbl_Location.SmtDomain" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtSmartHost

Property Name	Value
Description:	IP address or host name of SMTP smart host.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SmtipSmartHost
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SmtipSmartHost." If "tbl_LocationVMS.SmtipSmartHost" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The TimeZone associated with this VMS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TimeZone." If "tbl_LocationVMS.TimeZone" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferDialString

Property Name	Value
Description:	The phone number that a local Cisco Unity Connection VMS server dials to transfer a call to this Cisco Unity Connection VMS server.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferDialString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferDialString." If "tbl_LocationVMS.TransferDialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransferNumberOfRings

Property Name	Value
Description:	The number of rings the local Cisco Unity Connection VMS server waits for this Cisco Unity Connection VMS server to answer. If this Cisco Unity Connection VMS server does not answer after the specified number of rings, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferNumberOfRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferNumberOfRings." If "tbl_LocationVMS.TransferNumberOfRings" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferTimeout

Property Name	Value
Description:	The amount of time (in milliseconds) the local Cisco Unity Connection VMS server will wait for a response from this Cisco Unity Connection VMS server after this Cisco Unity Connection VMS server has answered the call. If this VMS server does not respond within the specified time period, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferTimeout." If "tbl_LocationVMS.TransferTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this location's voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.118. csp_LocationVMSDelete

Deletes a LocationVMS object from tbl_LocationVMS as specified by the @ObjectId parameter.

Additional Information

The corresponding Location object in tbl_Location will be automatically deleted by SQL via the FK cascade delete constraint.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Location object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_LocationVMSDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions can cause a Object Not found exception to be thrown: 1. The LocationVMS object specified by the @ObjectId was not found. The names of the object (Location VMS), table (tbl_LocationVMS), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_LocationVMS), and the column (----) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Location object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Location.ObjectId." If "tbl_Location.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.119. csp_LocationVMSModify

Updates the attributes of a LocationVMS object and those attributes of a Location object relevant to a VMS based on the values passed in via the parameters. The @ObjectId parameter identifies the LocationVMS and Location objects that are updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a LocationVMS object.
Optional	@AddressingMaxScope	In	inherit	smallint (2 bytes)	The scope (e.g., local VMS, dialing domain, entire Unity organization) of the search that Cisco Unity Connection performs when searching for a matching extension in the following cases: <ul style="list-style-type: none"> * When a subscriber addresses a message by using the phone. * When subscribers add members to private lists by using the phone or the Cisco Unity Connection Assistant. * When an administrator adds members to system or personal distribution lists by using the Cisco Unity Connection Administration. * When Cisco Unity Connection looks up the recipient for an incoming AMIS message.
Optional	@AgcTargetDb	In	inherit	smallint (2 bytes)	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Optional	@AllowBlindAddressing	In	inherit	smallint (2 bytes)	A flag indicating whether messages can be addressed to this location without an existing handler or subscriber.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BlindAddressingMaxScope	In	inherit	smallint (2 bytes)	The scope (e.g., none, local VMS server, dialing domain, entire Unity organization) of the blind addressing search for a matching delivery location that Cisco Unity Connection performs when a subscriber addresses a message by using the phone.
Optional	@DefaultLanguage	In	inherit	int (4 bytes)	Default language for subscribers and call handlers.
Optional	@DefaultTTSLanguage	In	inherit	int (4 bytes)	Default language to use for TTS playback.
Optional	@DefaultWaveFormatObjectId	In	inherit	char (36 characters)	The unique identifier of the WaveFormat object that specifies the wave format in which recorded messages are stored if the requested format is not available on the system.
Optional	@DialingDomainName	In	inherit	nvarchar (40 characters)	The name of the dialing domain of which this location is a member.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	explicit	nvarchar (40 characters)	The dialable number.
Optional	@IncludeLocations	In	inherit	smallint (2 bytes)	A flag indicating whether locations are included in searches. If set on the LocationVMS, the conversation will include locations in the search results.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this location object is the "primary" location, which cannot be deleted. (Used to prevent deletion of factory defaults.)
Optional	@KeypadMapId	In	inherit	smallint (2 bytes)	The keypad map used by this location. The keypad map specifies the numeric keys to which the letters Q and Z are assigned to on the phone. This is specified during Cisco Unity Connection setup.
Optional	@LastLicenseEvalTime	In	inherit	datetime (8 bytes)	The last time the license evaluation was done.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@LocalPhonePrefix	In	inherit	nvarchar (64 characters)	<p>The number that is used to construct addresses for Cisco Unity Connection subscribers who send messages to individuals who use the voice messaging system that corresponds to this delivery location.</p> <p>On outgoing messages from Cisco Unity Connection subscribers to subscribers at this VPIM location, the prefix is added to the beginning of the sender mailbox number to form the From address.</p> <p>On incoming messages to Cisco Unity Connection subscribers from subscribers at this VPIM location, the prefix is removed from the beginning of the recipient mailbox number to form the To address.</p>
Optional	@MaxContacts	In	inherit	int (4 bytes)	The maximum number of contacts that can be created for this location.
Optional	@MaxGreetingLength	In	inherit	int (4 bytes)	The maximum length (in seconds) allowed for recording a system greeting.
Optional	@NoLicenseCheck	In	explicit-withdefault	smallint (2 bytes)	Set to 1 to circumvent licensing check.
Optional	@OverallLicenseState	In	inherit	int (4 bytes)	Specifies the overall license state. It is valid if none of the license feature is in shutdown state. When this state becomes shutdown, the application will be shutdown.
Optional	@SkinnyLocalCACertificate	In	inherit	lvarchar (8000 characters)	The X.509 certificate formatted as a PEM format string (base-64 encoded).
Optional	@SkinnyLocalCACertificateFileName	In	inherit	nvarchar (40 characters)	The file name that should be assigned to the SkinnyLocalCACertificate to install the certificate on the Cisco Unified Communications Manager server(s). Installing the certificate on the CCM servers causes CCM to trust any Skinny device certificates signed by it, which is what we need to establish TLS Skinny connections to the CCM servers in the cluster.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SkinnyLocalCAPrivateKey	In	inherit	lvarchar (8000 characters)	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Optional	@SmtDomain	In	inherit	vvarchar (255 characters)	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Optional	@SmtSmartHost	In	inherit	vvarchar (40 characters)	IP address or host name of SMTP smart host.
Optional	@TimeZone	In	inherit	int (4 bytes)	The TimeZone associated with this VMS.
Optional	@TransferDialString	In	inherit	nvarchar (128 characters)	The phone number that a local Cisco Unity Connection VMS server dials to transfer a call to this Cisco Unity Connection VMS server.
Optional	@TransferNumberOfRings	In	inherit	int (4 bytes)	The number of rings the local Cisco Unity Connection VMS server waits for this Cisco Unity Connection VMS server to answer. If this Cisco Unity Connection VMS server does not answer after the specified number of rings, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Optional	@TransferTimeout	In	inherit	int (4 bytes)	The amount of time (in milliseconds) the local Cisco Unity Connection VMS server will wait for a response from this Cisco Unity Connection VMS server after this Cisco Unity Connection VMS server has answered the call. If this VMS server does not respond within the specified time period, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Optional	@VoiceName	In	explicit	vvarchar (40 characters)	Voice file to use for this location's voice name.

Exceptions

csp_LocationVMSModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The LocationVMS object specified by the @ObjectId was not found. The names of the object (Location VMS), table (tbl_LocationVMS), and column (ObjectId) are included with the exception message.

Parameter Properties

@AddressingMaxScope

Property Name	Value
Description:	The scope (e.g., local VMS, dialing domain, entire Unity organization) of the search that Cisco Unity Connection performs when searching for a matching extension in the following cases: <ul style="list-style-type: none"> * When a subscriber addresses a message by using the phone. * When subscribers add members to private lists by using the phone or the Cisco Unity Connection Assistant. * When an administrator adds members to system or personal distribution lists by using the Cisco Unity Connection Administration. * When Cisco Unity Connection looks up the recipient for an incoming AMIS message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AddressingMaxScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	AddressingMaxScope
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AddressingMaxScope." If "tbl_LocationVMS.AddressingMaxScope" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AgcTargetDb

Property Name	Value
Description:	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AgcTargetDb
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AgcTargetDb." If "tbl_LocationVMS.AgcTargetDb" can be NULL, then explicit NULL is allowed.
Default Value:	-26
Direction:	In
Update Column Value From Parameter:	True

@AllowBlindAddressing

Property Name	Value
Description:	A flag indicating whether messages can be addressed to this location without an existing handler or subscriber.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.AllowBlindAddressing
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.AllowBlindAddressing." If "tbl_LocationVMS.AllowBlindAddressing" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BlindAddressingMaxScope

Property Name	Value
Description:	The scope (e.g., none, local VMS server, dialing domain, entire Unity organization) of the blind addressing search for a matching delivery location that Cisco Unity Connection performs when a subscriber addresses a message by using the phone.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.BlindAddressingMaxScope
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	BlindAddressingMaxScope
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.BlindAddressingMaxScope." If "tbl_LocationVMS.BlindAddressingMaxScope" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DefaultLanguage

Property Name	Value
Description:	Default language for subscribers and call handlers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.DefaultLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultLanguage." If "tbl_LocationVMS.DefaultLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1033
Direction:	In
Update Column Value From Parameter:	True

@DefaultTTSLanguage

Property Name	Value
Description:	Default language to use for TTS playback.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_LocationVMS.DefaultTTSLanguage
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LanguageCode
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultTTSLanguage." If "tbl_LocationVMS.DefaultTTSLanguage" can be NULL, then explicit NULL is allowed.
Default Value:	1033
Direction:	In
Update Column Value From Parameter:	True

@DefaultWaveFormatObjectId

Property Name	Value
Description:	The unique identifier of the WaveFormat object that specifies the wave format in which recorded messages are stored if the requested format is not available on the system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.DefaultWaveFormatObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.DefaultWaveFormatObjectId." If "tbl_LocationVMS.DefaultWaveFormatObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	'8961a48d-085d-4023-a4b4-6f682f8a8578'
Direction:	In
Update Column Value From Parameter:	True

@DialingDomainName

Property Name	Value
Description:	The name of the dialing domain of which this location is a member.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Location.DialingDomainName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DialingDomainName." If "tbl_Location.DialingDomainName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DisplayName." If "tbl_Location.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	A DtmfAccessId (extension) is optional. This will be used when multiple locations are allowed such as in K2.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IncludeLocations

Property Name	Value
Description:	A flag indicating whether locations are included in searches. If set on the LocationVMS, the conversation will include locations in the search results.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.IncludeLocations
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.IncludeLocations." If "tbl_LocationVMS.IncludeLocations" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this location object is the "primary" location, which cannot be deleted. (Used to prevent deletion of factory defaults.)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.IsPrimary." If "tbl_LocationVMS.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@KeypadMapId

Property Name	Value
Description:	The keypad map used by this location. The keypad map specifies the numeric keys to which the letters Q and Z are assigned to on the phone. This is specified during Cisco Unity Connection setup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.KeypadMapId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	KeypadMap
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.KeypadMapId." If "tbl_LocationVMS.KeypadMapId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LastLicenseEvalTime

Property Name	Value
Description:	The last time the license evaluation was done.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.LastLicenseEvalTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.LastLicenseEvalTime." If "tbl_LocationVMS.LastLicenseEvalTime" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@LocalPhonePrefix

Property Name	Value
Description:	<p>The number that is used to construct addresses for Cisco Unity Connection subscribers who send messages to individuals who use the voice messaging system that corresponds to this delivery location.</p> <p>On outgoing messages from Cisco Unity Connection subscribes to subscribers at this VPIM location, the prefix is added to the beginning of the sender mailbox number to form the From address.</p> <p>On incoming messages to Cisco Unity Connection subscribers from subscribers at this VPIM location, the prefix is removed from the beginning of the recipient mailbox number to form the To address.</p>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.LocalPhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.LocalPhonePrefix." If "tbl_LocationVMS.LocalPhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MaxContacts

Property Name	Value
Description:	The maximum number of contacts that can be created for this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.MaxContacts
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.MaxContacts." If "tbl_LocationVMS.MaxContacts" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MaxGreetingLength

Property Name	Value
Description:	The maximum length (in seconds) allowed for recording a system greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.MaxGreetingLength
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.MaxGreetingLength." If "tbl_LocationVMS.MaxGreetingLength" can be NULL, then explicit NULL is allowed.
Default Value:	90
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Set to 1 to circumvent licensing check.
Notes:	License checks are performed in the background as well, this is only for temporarily adding ports before a license is purchased.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a LocationVMS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.ObjectId." If "tbl_LocationVMS.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@OverallLicenseState

Property Name	Value
Description:	Specifies the overall license state. It is valid if none of the license feature is in shutdown state. When this state becomes shutdown, the application will be shutdown.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.OverallLicenseState
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	LicenseStatus

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.OverallLicenseState." If "tbl_LocationVMS.OverallLicenseState" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCACertificate

Property Name	Value
Description:	The X.509 certificate formatted as a PEM format string (base-64 encoded).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCACertificate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCACertificate." If "tbl_LocationVMS.SkinnyLocalCACertificate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCACertificateFileName

Property Name	Value
Description:	The file name that should be assigned to the SkinnyLocalCACertificate to install the certificate on the Cisco Unified Communications Manager server(s). Installing the certificate on the CCM servers causes CCM to trust any Skinny device certificates signed by it, which is what we need to establish TLS Skinny connections to the CCM servers in the cluster.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCACertificateFileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCACertificateFileName." If "tbl_LocationVMS.SkinnyLocalCACertificateFileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SkinnyLocalCAPrivateKey

Property Name	Value
Description:	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SkinnyLocalCAPrivateKey
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SkinnyLocalCAPrivateKey." If "tbl_LocationVMS.SkinnyLocalCAPrivateKey" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SmtpDomain

Property Name	Value
Description:	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtpAddress).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.SmtpDomain
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.SmtDomain." If "tbl_Location.SmtDomain" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtSmartHost

Property Name	Value
Description:	IP address or host name of SMTP smart host.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.SmtSmartHost
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.SmtSmartHost." If "tbl_LocationVMS.SmtSmartHost" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TimeZone

Property Name	Value
Description:	The TimeZone associated with this VMS.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TimeZone
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TimeZone." If "tbl_LocationVMS.TimeZone" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferDialString

Property Name	Value
Description:	The phone number that a local Cisco Unity Connection VMS server dials to transfer a call to this Cisco Unity Connection VMS server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferDialString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferDialString." If "tbl_LocationVMS.TransferDialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TransferNumberOfRings

Property Name	Value
Description:	The number of rings the local Cisco Unity Connection VMS server waits for this Cisco Unity Connection VMS server to answer. If this Cisco Unity Connection VMS server does not answer after the specified number of rings, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferNumberOfRings
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferNumberOfRings." If "tbl_LocationVMS.TransferNumberOfRings" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@TransferTimeout

Property Name	Value
Description:	The amount of time (in milliseconds) the local Cisco Unity Connection VMS server will wait for a response from this Cisco Unity Connection VMS server after this Cisco Unity Connection VMS server has answered the call. If this VMS server does not respond within the specified time period, a prompt is played that says that the Cisco Unity Connection VMS server could not be reached, and the call is transferred to the opening greeting of the local Cisco Unity Connection VMS server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVMS.TransferTimeout
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVMS.TransferTimeout." If "tbl_LocationVMS.TransferTimeout" can be NULL, then explicit NULL is allowed.
Default Value:	5000
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this location's voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid

Property Name	Value
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.120. csp_LocationVPIMCreate

Creates a new LocationVPIM object by inserting a new row into tbl_LocationVPIM. A corresponding base Location object is also created in tbl_Location by executing csp_LocationCreate.

Additional Information

The corresponding Location object in tbl_Location will be automatically deleted by SQL via the FK cascade delete constraint.

Parameters for the following columns are excluded because they serve no purpose when creating a LocationVPIM object:

- LastDirectoryPush
- PushDirectory

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Required	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Required	@SmtDomain	In	inherit	varchar (255 characters)	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Optional	@AudioFormatIncoming	In	inherit	smallint (2 bytes)	An enumeration indicating whether incoming VPIM messages from the remote system corresponding to this location should be converted to another audio format.
Optional	@AudioFormatOutgoing	In	inherit	smallint (2 bytes)	An enumeration indicating whether VPIM messages from Unity to the remote system corresponding to this location should be converted to another audio format.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AutoCreateDisplayNameRule	In	inherit	varchar (128 characters)	Indicates how text names on incoming messages will be mapped to the display name for auto-created contacts. A value of NULL indicates the text name is mapped directly to the display name of the contact. A non-null value indicates this is a custom rule that defines the mapping of the text name to the display name. Example: <FirstName>, <LastName>
Optional	@AutoCreateExtensionRule	In	inherit	smallint (2 bytes)	An enumeration indicating how the phone number on incoming VPIM messages should be mapped to the extension for the auto-created contact.
Optional	@ContactTemplateObjectId	In	inherit	char (36 characters)	The template upon which to base new contacts created whose destination for messages is this LocationVPIM.
Optional	@DialingDomainName	In	inherit	nvarchar (40 characters)	The name of the dialing domain of which this location is a member.
Optional	@EnableAGC	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control to messages received from this VPIM location.
Optional	@EnableAutoCreateContact	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically created when messages are received from senders at this location.
Optional	@EnableAutoCreateNoVoiceName	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically created/updated when the incoming VPIM message does not include a recorded voice name.
Optional	@EnableAutoDeleteContact	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically deleted when an NDR is received.
Optional	@EnableAutoUpdateContact	In	inherit	smallint (2 bytes)	An enumeration indicating whether a contact is automatically updated when messages are received from senders at this location, and if so, under what condition the contact is updated.
Optional	@EnableAutoUpdateContactDisplayName	In	inherit	smallint (2 bytes)	A flag indicating whether a contact's display name is updated when a contact is automatically updated.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EnableOutgoingPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether outgoing messages can be marked "Private."
Optional	@EnableOutgoingSecureMessages	In	inherit	smallint (2 bytes)	A flag indicating whether outgoing messages can be marked "Secure."
Optional	@IncludeSenderVoiceName	In	inherit	smallint (2 bytes)	A flag indicating whether Unity adds the sender's recorded voice name to an outgoing VPIM message.
Optional	@IpAddress	In	inherit	varchar (40 characters)	The IP address of the VPIM server for this location.
Optional	@ListContactsInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether a contact should be listed in the phone directory for outside callers, when a contact is automatically created. Default value is 0. Values: 0: Do not list contact in directory 1: List contact in directory
Optional	@LocalPhonePrefix	In	inherit	varchar (64 characters)	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object
Optional	@RemotePhonePrefix	In	inherit	varchar (64 characters)	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Optional	@UseSmartSmtphost	In	inherit	smallint (2 bytes)	A flag indicating whether the Unity Connection SMTP server forwards messages to the SMTP Smart Host for delivery. Values: 0: Do not forward to SMTP Smart Host 1: Forward message to SMTP Smart Host
Optional	@VoiceName	In	inherit	varchar (40 characters)	Voice file to use for this location's voice name.

Exceptions

csp_LocationVPIMCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@AudioFormatIncoming

Property Name	Value
Description:	An enumeration indicating whether incoming VPIM messages from the remote system corresponding to this location should be converted to another audio format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AudioFormatIncoming
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAudioFormatIncoming
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AudioFormatIncoming." If "tbl_LocationVPIM.AudioFormatIncoming" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AudioFormatOutgoing

Property Name	Value
Description:	An enumeration indicating whether VPIM messages from Unity to the remote system corresponding to this location should be converted to another audio format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AudioFormatOutgoing
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAudioFormatOutgoing
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AudioFormatOutgoing." If "tbl_LocationVPIM.AudioFormatOutgoing" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AutoCreateDisplayNameRule

Property Name	Value
Description:	Indicates how text names on incoming messages will be mapped to the display name for auto-created contacts. A value of NULL indicates the text name is mapped directly to the display name of the contact. A non-null value indicates this is a custom rule that defines the mapping of the text name to the display name. Example: <FirstName>, <LastName>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AutoCreateDisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AutoCreateDisplayNameRule." If "tbl_LocationVPIM.AutoCreateDisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AutoCreateExtensionRule

Property Name	Value
Description:	An enumeration indicating how the phone number on incoming VPIM messages should be mapped to the extension for the auto-created contact.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AutoCreateExtensionRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAutoCreateExtensionRule
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AutoCreateExtensionRule." If "tbl_LocationVPIM.AutoCreateExtensionRule" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ContactTemplateObjectId

Property Name	Value
Description:	The template upon which to base new contacts created whose destination for messages is this LocationVPIM.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ContactTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ContactTemplateObjectId." If "tbl_LocationVPIM.ContactTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DialingDomainName

Property Name	Value
Description:	The name of the dialing domain of which this location is a member.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DialingDomainName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DialingDomainName." If "tbl_Location.DialingDomainName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DisplayName." If "tbl_Location.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnableAGC

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should apply software-based gain control to messages received from this VPIM location.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAGC." If "tbl_LocationVPIM.EnableAGC" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoCreateContact

Property Name	Value
Description:	A flag indicating whether a contact is automatically created when messages are received from senders at this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoCreateContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoCreateContact." If "tbl_LocationVPIM.EnableAutoCreateContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoCreateNoVoiceName

Property Name	Value
Description:	A flag indicating whether a contact is automatically created/updated when the incoming VPIM message does not include a recorded voice name.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoCreateNoVoiceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoCreateNoVoiceName." If "tbl_LocationVPIM.EnableAutoCreateNoVoiceName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoDeleteContact

Property Name	Value
Description:	A flag indicating whether a contact is automatically deleted when an NDR is received.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoDeleteContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoDeleteContact." If "tbl_LocationVPIM.EnableAutoDeleteContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoUpdateContact

Property Name	Value
Description:	An enumeration indicating whether a contact is automatically updated when messages are received from senders at this location, and if so, under what condition the contact is updated.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoUpdateContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimEnableAutoUpdateContact
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoUpdateContact." If "tbl_LocationVPIM.EnableAutoUpdateContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoUpdateContactDisplayName

Property Name	Value
Description:	A flag indicating whether a contact's display name is updated when a contact is automatically updated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoUpdateContactDisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoUpdateContactDisplayName." If "tbl_LocationVPIM.EnableAutoUpdateContactDisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableOutgoingPrivateMessages

Property Name	Value
Description:	A flag indicating whether outgoing messages can be marked "Private."

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableOutgoingPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableOutgoingPrivateMessages." If "tbl_LocationVPIM.EnableOutgoingPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableOutgoingSecureMessages

Property Name	Value
Description:	A flag indicating whether outgoing messages can be marked "Secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableOutgoingSecureMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableOutgoingSecureMessages." If "tbl_LocationVPIM.EnableOutgoingSecureMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IncludeSenderVoiceName

Property Name	Value
Description:	A flag indicating whether Unity adds the sender's recorded voice name to an outgoing VPIM message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.IncludeSenderVoiceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.IncludeSenderVoiceName." If "tbl_LocationVPIM.IncludeSenderVoiceName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IpAddress

Property Name	Value
Description:	The IP address of the VPIM server for this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.IpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	IPAddress
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.IpAddress." If "tbl_LocationVPIM.IpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ListContactsInDirectory

Property Name	Value
Description:	A flag indicating whether a contact should be listed in the phone directory for outside callers, when a contact is automatically created. Default value is 0. Values: 0: Do not list contact in directory 1: List contact in directory
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ListContactsInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ListContactsInDirectory." If "tbl_LocationVPIM.ListContactsInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LocalPhonePrefix

Property Name	Value
Description:	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.LocalPhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.LocalPhonePrefix." If "tbl_LocationVPIM.LocalPhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ObjectId." If "tbl_LocationVPIM.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RemotePhonePrefix

Property Name	Value
Description:	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.RemotePhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.RemotePhonePrefix." If "tbl_LocationVPIM.RemotePhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtipDomain

Property Name	Value
Description:	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.SmtDomain
Required/Optional Parameter:	Required
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.SmtDomain." If "tbl_Location.SmtDomain" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UseSmartSmtHost

Property Name	Value
Description:	A flag indicating whether the Unity Connection SMTP server forwards messages to the SMTP Smart Host for delivery. Values: 0: Do not forward to SMTP Smart Host 1: Forward message to SMTP Smart Host
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.UseSmartSmtHost
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.UseSmartSmtHost." If "tbl_LocationVPIM.UseSmartSmtHost" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this location's voice name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Inherit - inherit parameter value from "tbl_StreamFile.FileName." If "tbl_StreamFile.FileName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.121. csp_LocationVPIMDelete

Deletes a LocationVPIM object from tbl_LocationVPIM as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Location object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_LocationVPIMDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	
1004	EXCEPTION_OBJECT_NOTFOUND	

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Location object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Location.ObjectId." If "tbl_Location.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.122. csp_LocationVPIMModify

Updates the attributes of a LocationVPIM object and those attributes of a Location object relevant based on the values passed in via the parameters. The @ObjectId parameter identifies the LocationVPIM and Location objects that are updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Contact object
Optional	@AudioFormatIncoming	In	inherit	smallint (2 bytes)	An enumeration indicating whether incoming VPIM messages from the remote system corresponding to this location should be converted to another audio format.
Optional	@AudioFormatOutgoing	In	inherit	smallint (2 bytes)	An enumeration indicating whether VPIM messages from Unity to the remote system corresponding to this location should be converted to another audio format.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@AutoCreateDisplayNameRule	In	inherit	varchar (128 characters)	Indicates how text names on incoming messages will be mapped to the display name for auto-created contacts. A value of NULL indicates the text name is mapped directly to the display name of the contact. A non-null value indicates this is a custom rule that defines the mapping of the text name to the display name. Example: <FirstName>, <LastName>
Optional	@AutoCreateExtensionRule	In	inherit	smallint (2 bytes)	An enumeration indicating how the phone number on incoming VPIM messages should be mapped to the extension for the auto-created contact.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ContactTemplateObjectId	In	inherit	char (36 characters)	The template upon which to base new contacts created whose destination for messages is this LocationVPIM.
Optional	@DialingDomainName	In	inherit	nvarchar (40 characters)	The name of the dialing domain of which this location is a member.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfAccessId	In	inherit	nvarchar (40 characters)	The dialable number.
Optional	@EnableAGC	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control to messages received from this VPIM location.
Optional	@EnableAutoCreateContact	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically created when messages are received from senders at this location.
Optional	@EnableAutoCreateNoVoiceName	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically created/updated when the incoming VPIM message does not include a recorded voice name.
Optional	@EnableAutoDeleteContact	In	inherit	smallint (2 bytes)	A flag indicating whether a contact is automatically deleted when an NDR is received.
Optional	@EnableAutoUpdateContact	In	inherit	smallint (2 bytes)	An enumeration indicating whether a contact is automatically updated when messages are received from senders at this location, and if so, under what condition the contact is updated.
Optional	@EnableAutoUpdateContactDisplayName	In	inherit	smallint (2 bytes)	A flag indicating whether a contact's display name is updated when a contact is automatically updated.
Optional	@EnableOutgoingPrivateMessages	In	inherit	smallint (2 bytes)	A flag indicating whether outgoing messages can be marked "Private."
Optional	@EnableOutgoingSecureMessages	In	inherit	smallint (2 bytes)	A flag indicating whether outgoing messages can be marked "Secure."
Optional	@IncludeSenderVoiceName	In	inherit	smallint (2 bytes)	A flag indicating whether Unity adds the sender's recorded voice name to an outgoing VPIM message.
Optional	@IpAddress	In	inherit	varchar (40 characters)	The IP address of the VPIM server for this location.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@LastDirectoryPushDate	In	inherit	datetime (8 bytes)	The time and date of the last manual directory push to this VPIM location. NULL indicates no push has taken place.
Optional	@ListContactsInDirectory	In	inherit	smallint (2 bytes)	A flag indicating whether a contact should be listed in the phone directory for outside callers, when a contact is automatically created. Default value is 0. Values: 0: Do not list contact in directory 1: List contact in directory
Optional	@LocalPhonePrefix	In	inherit	varchar (64 characters)	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Optional	@PushDirectory	In	inherit	smallint (2 bytes)	Tells SMTP service whether or not to execute a manual directory push to this VPIM location.
Optional	@RemotePhonePrefix	In	inherit	varchar (64 characters)	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Optional	@SmtDomain	In	inherit	varchar (255 characters)	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Optional	@UseSmartSmtHost	In	inherit	smallint (2 bytes)	A flag indicating whether the Unity Connection SMTP server forwards messages to the SMTP Smart Host for delivery. Values: 0: Do not forward to SMTP Smart Host 1: Forward message to SMTP Smart Host
Optional	@VoiceName	In	explicit	varchar (40 characters)	Voice file to use for this location's voice name.

Exceptions

csp_LocationVPIMModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	

Parameter Properties

@AudioFormatIncoming

Property Name	Value
Description:	An enumeration indicating whether incoming VPIM messages from the remote system corresponding to this location should be converted to another audio format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AudioFormatIncoming
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAudioFormatIncoming
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AudioFormatIncoming." If "tbl_LocationVPIM.AudioFormatIncoming" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AudioFormatOutgoing

Property Name	Value
Description:	An enumeration indicating whether VPIM messages from Unity to the remote system corresponding to this location should be converted to another audio format.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AudioFormatOutgoing
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAudioFormatOutgoing
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AudioFormatOutgoing." If "tbl_LocationVPIM.AudioFormatOutgoing" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AutoCreateDisplayNameRule

Property Name	Value
Description:	Indicates how text names on incoming messages will be mapped to the display name for auto-created contacts. A value of NULL indicates the text name is mapped directly to the display name of the contact. A non-null value indicates this is a custom rule that defines the mapping of the text name to the display name. Example: <FirstName>, <LastName>
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AutoCreateDisplayNameRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AutoCreateDisplayNameRule." If "tbl_LocationVPIM.AutoCreateDisplayNameRule" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AutoCreateExtensionRule

Property Name	Value
Description:	An enumeration indicating how the phone number on incoming VPIM messages should be mapped to the extension for the auto-created contact.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.AutoCreateExtensionRule
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimAutoCreateExtensionRule
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.AutoCreateExtensionRule." If "tbl_LocationVPIM.AutoCreateExtensionRule" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@ContactTemplateObjectId

Property Name	Value
Description:	The template upon which to base new contacts created whose destination for messages is this LocationVPIM.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ContactTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ContactTemplateObjectId." If "tbl_LocationVPIM.ContactTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DialingDomainName

Property Name	Value
Description:	The name of the dialing domain of which this location is a member.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DialingDomainName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DialingDomainName." If "tbl_Location.DialingDomainName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this Location, e.g. "Seattle Office." Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.DisplayName." If "tbl_Location.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfAccessId

Property Name	Value
Description:	The dialable number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_DtmfAccessId.DtmfAccessId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	DtmfAccessId
Null Handling:	Inherit - inherit parameter value from "tbl_DtmfAccessId.DtmfAccessId." If "tbl_DtmfAccessId.DtmfAccessId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnableAGC

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should apply software-based gain control to messages received from this VPIM location.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAGC." If "tbl_LocationVPIM.EnableAGC" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoCreateContact

Property Name	Value
Description:	A flag indicating whether a contact is automatically created when messages are received from senders at this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoCreateContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoCreateContact." If "tbl_LocationVPIM.EnableAutoCreateContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoCreateNoVoiceName

Property Name	Value
Description:	A flag indicating whether a contact is automatically created/updated when the incoming VPIM message does not include a recorded voice name.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoCreateNoVoiceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoCreateNoVoiceName." If "tbl_LocationVPIM.EnableAutoCreateNoVoiceName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoDeleteContact

Property Name	Value
Description:	A flag indicating whether a contact is automatically deleted when an NDR is received.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoDeleteContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoDeleteContact." If "tbl_LocationVPIM.EnableAutoDeleteContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoUpdateContact

Property Name	Value
Description:	An enumeration indicating whether a contact is automatically updated when messages are received from senders at this location, and if so, under what condition the contact is updated.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoUpdateContact
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	VpimEnableAutoUpdateContact
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoUpdateContact." If "tbl_LocationVPIM.EnableAutoUpdateContact" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableAutoUpdateContactDisplayName

Property Name	Value
Description:	A flag indicating whether a contact's display name is updated when a contact is automatically updated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableAutoUpdateContactDisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableAutoUpdateContactDisplayName." If "tbl_LocationVPIM.EnableAutoUpdateContactDisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableOutgoingPrivateMessages

Property Name	Value
Description:	A flag indicating whether outgoing messages can be marked "Private."

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableOutgoingPrivateMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableOutgoingPrivateMessages." If "tbl_LocationVPIM.EnableOutgoingPrivateMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@EnableOutgoingSecureMessages

Property Name	Value
Description:	A flag indicating whether outgoing messages can be marked "Secure."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.EnableOutgoingSecureMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.EnableOutgoingSecureMessages." If "tbl_LocationVPIM.EnableOutgoingSecureMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IncludeSenderVoiceName

Property Name	Value
Description:	A flag indicating whether Unity adds the sender's recorded voice name to an outgoing VPIM message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.IncludeSenderVoiceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.IncludeSenderVoiceName." If "tbl_LocationVPIM.IncludeSenderVoiceName" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IPAddress

Property Name	Value
Description:	The IP address of the VPIM server for this location.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.IpAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	IPAddress
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.IpAddress." If "tbl_LocationVPIM.IpAddress" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LastDirectoryPushDate

Property Name	Value
Description:	The time and date of the last manual directory push to this VPIM location. NULL indicates no push has taken place.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.LastDirectoryPushDate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.LastDirectoryPushDate." If "tbl_LocationVPIM.LastDirectoryPushDate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ListContactsInDirectory

Property Name	Value
Description:	A flag indicating whether a contact should be listed in the phone directory for outside callers, when a contact is automatically created. Default value is 0. Values: 0: Do not list contact in directory 1: List contact in directory
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ListContactsInDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ListContactsInDirectory." If "tbl_LocationVPIM.ListContactsInDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@LocalPhonePrefix

Property Name	Value
Description:	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.LocalPhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.LocalPhonePrefix." If "tbl_LocationVPIM.LocalPhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Contact object
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.ObjectId." If "tbl_LocationVPIM.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PushDirectory

Property Name	Value
Description:	Tells SMTP service whether or not to execute a manual directory push to this VPIM location.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.PushDirectory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.PushDirectory." If "tbl_LocationVPIM.PushDirectory" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RemotePhonePrefix

Property Name	Value
Description:	The number used to construct addresses for contacts who use the voice messaging system that corresponds to this location. NULL is allowed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.RemotePhonePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.RemotePhonePrefix." If "tbl_LocationVPIM.RemotePhonePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SmtDomain

Property Name	Value
Description:	The domain portion (right-half) of an internet-addressable address (for example, london.cisco.com). This is used to form a user's, contact's, and distribution list's SMTP address (tbl_Alias.SmtAddress).
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Location.SmtDomain
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (255 characters)
Custom Type:	DomainName
Null Handling:	Inherit - inherit parameter value from "tbl_Location.SmtDomain." If "tbl_Location.SmtDomain" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UseSmartSmtHost

Property Name	Value
Description:	A flag indicating whether the Unity Connection SMTP server forwards messages to the SMTP Smart Host for delivery. Values: 0: Do not forward to SMTP Smart Host 1: Forward message to SMTP Smart Host
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LocationVPIM.UseSmartSmtHost
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_LocationVPIM.UseSmartSmtHost." If "tbl_LocationVPIM.UseSmartSmtHost" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VoiceName

Property Name	Value
Description:	Voice file to use for this location's voice name.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_StreamFile.FileName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	FileNameGuid
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.123. csp_LoggerDiagnosticGridModify

Updates the attributes of a LoggerDiagnosticGrid object based on the values passed in via the parameters. The @ObjectId parameter identifies the LoggerDiagnosticGrid object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	explicit-withdefault	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a LoggerDiagnosticGrid object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DefaultFlags	In	inherit	int (4 bytes)	The default grid flags.
Optional	@Flags	In	inherit	int (4 bytes)	The current grid flags.
Optional	@Name	In	inherit	nvarchar (64 characters)	The text name of the diagnostic grid.

Exceptions

csp_LoggerDiagnosticGridModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The LoggerDiagnosticGrid object specified by the @ObjectId was not found. The names of the object (Logger diagnostic grid), table (tbl_LoggerDiagnosticGrid), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultFlags

Property Name	Value
Description:	The default grid flags.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_LoggerDiagnosticGrid.DefaultFlags
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LoggerDiagnosticGrid.DefaultFlags." If "tbl_LoggerDiagnosticGrid.DefaultFlags" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Flags

Property Name	Value
Description:	The current grid flags.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LoggerDiagnosticGrid.Flags
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LoggerDiagnosticGrid.Flags." If "tbl_LoggerDiagnosticGrid.Flags" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Name

Property Name	Value
Description:	The text name of the diagnostic grid.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LoggerDiagnosticGrid.Name
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_LoggerDiagnosticGrid.Name." If "tbl_LoggerDiagnosticGrid.Name" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a LoggerDiagnosticGrid object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_LoggerDiagnosticGrid.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "NULL."
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.124. csp_LoggerDiagnosticGridReset

Resets all diagnostic grids to their original, default values

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_LoggerDiagnosticGridReset does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.125. csp_MailboxAttributesGet

Retrieves the attributes for a specific mailbox.

Additional Information

The parameters @MailboxId and @MailboxStoreObjectId must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ByteSize	Out	ignore	int (4 bytes)	The size (in bytes) of the mailbox.
Optional	@Creation	Out	ignore	datetime (8 bytes)	The date and time the mailbox was created.
Optional	@MessageAgingPolicy ObjectId	Out	ignore	char (36 characters)	The policy object used to age the mailbox. If null then no policy will be applied.
Optional	@Mounted	Out	ignore	smallint (2 bytes)	A flag indicating whether the mailbox is mounted (0=false, 1=true).
Optional	@NotificationType	Out	ignore	smallint (2 bytes)	Indicates the notification type (0=Classical, 1=Modern).
Optional	@NumMessages	Out	ignore	int (4 bytes)	The number of messages in the mailbox.
Optional	@SendReadReceipts	Out	ignore	smallint (2 bytes)	A flag indicating whether this mailbox allows the system to send read receipts on behalf of this mailbox (0=false, 1=true).

Exceptions

csp_MailboxAttributesGet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId and @MailboxStoreObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ByteSize

Property Name	Value
Description:	The size (in bytes) of the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Creation

Property Name	Value
Description:	The date and time the mailbox was created.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	Out
Update Column Value From Parameter:	False

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The policy object used to age the mailbox. If null then no policy will be applied.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Mounted

Property Name	Value
Description:	A flag indicating whether the mailbox is mounted (0=false,1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@NotificationType

Property Name	Value
Description:	Indicates the notification type (0=Classical, 1=Modern).
Notes:	See UnityMbxDb documentation for more information.
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@NumMessages

Property Name	Value
Description:	The number of messages in the mailbox.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether this mailbox allows the system to send read receipts on behalf of this mailbox (0=false, 1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.126. csp_MailboxAttributesSet

Sets the attributes for a specific mailbox.

Additional Information

The parameters @MailboxId and @MailboxStoreObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MessageAgingPolicy ObjectId	In	explicit	char (36 characters)	The policy object used to age the mailbox. If null, then no policy will be applied.
Optional	@Mounted	In	ignore	smallint (2 bytes)	A flag indicating whether the mailbox is mounted (0=false, 1=true).
Optional	@NotificationType	In	ignore	smallint (2 bytes)	Indicates the notification type (0=Classical, 1=Modern).
Optional	@SendReadReceipts	In	ignore	smallint (2 bytes)	A flag indicating whether this mailbox allows the system to send read receipts on behalf of this mailbox (0=false, 1=true).

Exceptions

csp_MailboxAttributesSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId and @MailboxStoreObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The policy object used to age the mailbox. If null, then no policy will be applied.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Mounted

Property Name	Value
Description:	A flag indicating whether the mailbox is mounted (0=false,1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@NotificationType

Property Name	Value
Description:	Indicates the notification type (0=Classical, 1=Modern).
Notes:	See UnityMbxDb documentation for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@SendReadReceipts

Property Name	Value
Description:	A flag indicating whether this mailbox allows the system to send read receipts on behalf of this mailbox (0=false, 1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.127. csp_MailboxCreate

Creates a UMSS mailbox for a user. This procedure is not intended for use by clients. It is used internally by csp_UserCreate.

Additional Information

The parameters @IsPrimary, @MailboxStoreObjectId, and @UserObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this mailbox is the primary mailbox of the user.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object to which this mailbox belongs.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User account object to which this mailbox belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Description	In	ignore	nvarchar (255 characters)	
Optional	@MailboxId	Out	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for mailbox access on server.

Exceptions

csp_MailboxCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@IsPrimary, @MailboxStoreObjectId, and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStoreObjectId for the specified MailboxStore was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Description

Property Name	Value
Description:	
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (255 characters)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this mailbox is the primary mailbox of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.IsPrimary
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.IsPrimary." If "tbl_MailboxMap.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User account object to which this mailbox belongs.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.UserObjectId." If "tbl_MailboxMap.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@WebdavUrl

Property Name	Value
Description:	Relative URL for mailbox access on server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.128. csp_MailboxMapCreate

Creates a mapping of a user with their mailboxid in Unity Message Store Solution (UMSS) or other message store such as Exchange or Domino.

Additional Information

To create a mailbox mapping for a user, provide the @MailboxStoreObjectId, @MailboxId and @UserObjectId parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object to which this mailbox belongs.
Required	@UserObjectId	In	inherit	char (36 characters)	The unique identifier of the User account object to which this mailbox belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this mailbox is the primary mailbox of the user.
Optional	@MailboxLoginType	In	inherit	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Optional	@MailboxPassword	In	inherit	varchar (254 characters)	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for mailbox access on server.

Exceptions

csp_MailboxMapCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId, @MailboxStoreObjectId, and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStoreObjectId for the specified MailboxStore was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this mailbox is the primary mailbox of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.IsPrimary." If "tbl_MailboxMap.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MailboxLoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxLoginType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxLoginType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxLoginType." If "tbl_MailboxMap.MailboxLoginType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MailboxPassword

Property Name	Value
Description:	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxPassword." If "tbl_MailboxMap.MailboxPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UserObjectId

Property Name	Value
Description:	The unique identifier of the User account object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.UserObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.UserObjectId." If "tbl_MailboxMap.UserObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@WebdavUrl

Property Name	Value
Description:	Relative URL for mailbox access on server.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.129. csp_MailboxMapDelete

Deletes a specified mapping of a mailbox with a user.

Additional Information

The identifier of the mailbox store and mailbox must be provided via the input parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object to which this mailbox belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_MailboxMapDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId and @MailboxStoreObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxId for the specified MailboxStore was not found. The names of the object (Mailbox map), table (tbl_MailboxMap), and columns (MailboxStoreObjectId and MailboxId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.130. csp_MailboxMapModify

Updates the attributes of a specified instance of a MailBoxMap object based on the values passed in via the parameters.

Additional Information

The identifier of the MailboxStore, User and Mailbox must be provided via the input parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The identifier of a single mailbox on the specified mailbox store.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object to which this mailbox belongs.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IsPrimary	In	inherit	smallint (2 bytes)	A flag indicating whether this mailbox is the primary mailbox of the user.
Optional	@LastGuiAccessTime	In	inherit	datetime (8 bytes)	The last time the user accessed their this mailbox through the GUI.
Optional	@LastTuiAccessTime	In	inherit	datetime (8 bytes)	The last time the user accessed their this mailbox through the TUI.
Optional	@MailboxLoginType	In	inherit	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Optional	@MailboxPassword	In	inherit	varchar (254 characters)	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for mailbox access on server.

Exceptions

csp_MailboxMapModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId, @MailboxStoreObjectId, and @UserObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxId for the specified MailboxStore was not found. The names of the object (Mailbox map), table (tbl_MailboxMap), and columns (MailboxStoreObjectId and MailboxId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IsPrimary

Property Name	Value
Description:	A flag indicating whether this mailbox is the primary mailbox of the user.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.IsPrimary
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.IsPrimary." If "tbl_MailboxMap.IsPrimary" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@LastGuiAccessTime

Property Name	Value
Description:	The last time the user accessed their this mailbox through the GUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.LastGuiAccessTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.LastGuiAccessTime." If "tbl_MailboxMap.LastGuiAccessTime" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@LastTuiAccessTime

Property Name	Value
Description:	The last time the user accessed their this mailbox through the TUI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.LastTuiAccessTime
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.LastTuiAccessTime." If "tbl_MailboxMap.LastTuiAccessTime" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	The identifier of a single mailbox on the specified mailbox store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxLoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxLoginType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxLoginType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxLoginType." If "tbl_MailboxMap.MailboxLoginType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MailboxPassword

Property Name	Value
Description:	For non-UMSS mailbox stores, the password for conversations to use to logon and retrieve messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxPassword." If "tbl_MailboxMap.MailboxPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreObjectId

Property Name	Value
Description:	The unique identifier of the MailboxStore object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@WebdavUrl

Property Name	Value
Description:	Relative URL for mailbox access on server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.131. csp_MailboxModify

Modifies the settings for the specified mailbox, mailboxstore pair.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	The objectid of the mailbox for which settings are to be modified.
Required	@MailboxStoreId	In	inherit	char (36 characters)	The unique identifier of the MailboxStore object to which this mailbox belongs.
Optional	@AuditAlias	In	explicit-withdefault	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	explicit-withdefault	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MailboxLoginType	In	inherit	int (4 bytes)	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Optional	@MessageAgingPolicy ObjectId	In	explicit	char (36 characters)	The policy object used to age the mailbox. If null, then no policy will be applied.
Optional	@Mounted	In	ignore	smallint (2 bytes)	A flag indicating whether the mailbox is mounted (0=false,1=true).
Optional	@NotificationType	In	ignore	smallint (2 bytes)	Indicates the notification type (0=Classical, 1=Modern).
Optional	@SendReadReceipts	In	ignore	smallint (2 bytes)	If set to 1 then notifications will be enabled for this user
Optional	@WebdavUrl	In	inherit	lvarchar (256 characters)	Relative URL for mailbox access on server.

Exceptions

csp_MailboxModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@mailboxid and @mailboxstoreid) is NULL. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	The specified mailbox was not found in the specified mailbox store. The names of the object (User), parameter (@mailboxid), table (tbl_LocationVMS), and column (MailboxId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@MailboxId

Property Name	Value
Description:	The objectid of the mailbox for which settings are to be modified.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxLoginType

Property Name	Value
Description:	Type of login to use - user alias, login as guest, or login using MailboxId (or part of it)
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxLoginType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxLoginType

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxLoginType." If "tbl_MailboxMap.MailboxLoginType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreId

Property Name	Value
Description:	The unique identifier of the MailboxStore object to which this mailbox belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxStoreObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxStoreObjectId." If "tbl_MailboxMap.MailboxStoreObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The policy object used to age the mailbox. If null, then no policy will be applied.
Notes:	An ObjectId is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Explicit NULL - a value of NULL in the parameter is treated as it is intentional.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@Mounted

Property Name	Value
Description:	A flag indicating whether the mailbox is mounted (0=false,1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@NotificationType

Property Name	Value
Description:	Indicates the notification type (0=Classical, 1=Modern).
Notes:	See UnityMbxDb documentation for more information.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@SendReadReceipts

Property Name	Value
Description:	If set to 1 then notifications will be enabled for this user
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

@WebdavUrl

Property Name	Value
Description:	Relative URL for mailbox access on server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.WebdavUrl
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.WebdavUrl." If "tbl_MailboxMap.WebdavUrl" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.132. csp_MailboxQuotaGet

Retrieves the quotas for a specific UMSS mailbox.

Additional Information

The parameters @MailboxId and @MailboxStoreObjectId must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	Mailbox to retrieve quota from.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Receive	Out	ignore	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@Send	Out	ignore	int (4 bytes)	The mailbox size (in bytes) send limit.
Optional	@StoreDefault	Out	ignore	smallint (2 bytes)	Uses store default if set
Optional	@Warn	Out	ignore	int (4 bytes)	The mailbox size (in bytes) warning limit.

Exceptions

csp_MailboxQuotaGet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId and @MailboxStoreObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxId

Property Name	Value
Description:	Mailbox to retrieve quota from.
Notes:	This must be the id of a mailbox that is assigned to a user via tbl_MailboxMap.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Receive

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Send

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@StoreDefault

Property Name	Value
Description:	Uses store default if set
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Warn

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.133. csp_MailboxQuotaSet

Sets the quotas for a specific UMSS mailbox.

Additional Information

The parameters @MailboxId, @MailboxStoreObjectId, @Receive, @Send and @Warning must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxId	In	inherit	nvarchar (110 characters)	Mailbox to retrieve quota from.
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Required	@Receive	In	ignore	int (4 bytes)	The mailbox size (in bytes) receive limit.
Required	@Send	In	ignore	int (4 bytes)	The mailbox size (in bytes) send limit.
Required	@Warn	In	ignore	int (4 bytes)	The mailbox size (in bytes) warning limit.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MailboxQuotaSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxId, @MailboxStoreObjectId, @Receive, @Send, and @Warning) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxId

Property Name	Value
Description:	Mailbox to retrieve quota from.
Notes:	This must be the id of a mailbox that is assigned to a user via tbl_MailboxMap.
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxMap.MailboxId
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (110 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxMap.MailboxId." If "tbl_MailboxMap.MailboxId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Receive

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Send

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Warn

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.134. csp_MailboxStoreAttributesGet

Retrieves attributes from a specified UMSS mail database.

Additional Information

The parameter @MailboxStoreObjectId must be provided.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The mail store from which to retrieve attribute information.
Optional	@AuditAlias	In	explicit-with default	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	explicit-with default	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Creation	Out	ignore	datetime (8 bytes)	The date and time the database was created.
Optional	@Mounted	Out	ignore	smallint (2 bytes)	A flag indicating whether the mail database is mounted (0=false, 1=true).
Optional	@NumMailboxes	Out	ignore	int (4 bytes)	The number of mailboxes currently in the mail database.
Optional	@SizeInKB	Out	ignore	bigint (8 bytes)	The size of mail database in kilobytes.

Exceptions

csp_MailboxStoreAttributesGet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MailboxStoreObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@Creation

Property Name	Value
Description:	The date and time the database was created.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	datetime (8 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The mail store from which to retrieve attribute information.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Mounted

Property Name	Value
Description:	A flag indicating whether the mail database is mounted (0=false,1=true).
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@NumMailboxes

Property Name	Value
Description:	The number of mailboxes currently in the mail database.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@SizeInKB

Property Name	Value
Description:	The size of mail database in kilobytes.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	bigint (8 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.135. csp_MailboxStoreAttributesSet

Sets the attributes for a UMSS mail database.

Additional Information

Currently the only attribute that can be set is "Mounted."

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The mail store for which to set the attribute information.
Required	@Mounted	In	ignore	smallint (2 bytes)	A flag indicating whether the mail database is mounted (0=false, 1=true).
Optional	@AuditAlias	In	explicit-with-default	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	explicit-with-default	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MailboxStoreAttributesSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MailboxStoreObjectId and @Mounted) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "'UnityDirDb'."
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The mail store for which to set the attribute information.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Mounted

Property Name	Value
Description:	A flag indicating whether the mail database is mounted (0=false,1=true).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.136. csp_MailboxStoreMapCreate

Creates a new MailboxStoreMap object by inserting a new row into tbl_MailboxStoreMap. A MailboxStoreMap object maps a mailbox database with a grouping of mailboxes for administrative purposes.

Additional Information

The parameters @Alias and @Server must be provided.

For a MailboxStoreType of "WebDav," a ServiceAlias, ServicePassword and Server is required. (It is possible to set WebDAV with no password, but Connection requires it.)

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Server	In	inherit	lvarchar (256 characters)	The name of the server on which the mailbox store resides.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DbInstance	In	inherit	lvarchar (256 characters)	The name of the dbinstance on which the mailbox store resides.
Optional	@DialString	In	inherit	nvarchar (40 characters)	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	A descriptive name for the Message Store.
Optional	@MailboxStoreType	In	inherit	int (4 bytes)	The type of mailbox store (e.g., UMSS).
Optional	@MailDatabase	In	inherit	lvarchar (512 characters)	The name of the mailbox database, such as "UnityMbxDb1."
Optional	@Mounted	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox store is mounted.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@RequiredSecurity	In	inherit	int (4 bytes)	The method of encryption that Cisco Unity Connection will use on a mailstore connection.
Optional	@ServiceAlias	In	inherit	lvarchar (256 characters)	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@ServicePassword	In	inherit	varchar (254 characters)	The password for a service to use to logon to mailbox store for message retrieval.

Exceptions

csp_MailboxStoreMapCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Alias and @Server) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DbInstance

Property Name	Value
Description:	The name of the dbinstance on which the mailbox store resides.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DbInstance
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DbInstance." If "tbl_MailboxStoreMap.DbInstance" can be NULL, then explicit NULL is allowed.
Default Value:	ciscountry
Direction:	In
Update Column Value From Parameter:	True

@DialString

Property Name	Value
Description:	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DialString

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DialString." If "tbl_MailboxStoreMap.DialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	A descriptive name for the Message Store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DisplayName." If "tbl_MailboxStoreMap.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreType

Property Name	Value
Description:	The type of mailbox store (e.g., UMSS).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailboxStoreType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxStoreType

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailboxStoreType." If "tbl_MailboxStoreMap.MailboxStoreType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MailDatabase

Property Name	Value
Description:	The name of the mailbox database, such as "UnityMbxDb1."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailDatabase
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailDatabase." If "tbl_MailboxStoreMap.MailDatabase" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Mounted

Property Name	Value
Description:	A flag indicating whether the mailbox store is mounted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RequiredSecurity

Property Name	Value
Description:	The method of encryption that Cisco Unity Connection will use on a mailstore connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.RequiredSecurity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailstoreConnectionEncryption
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.RequiredSecurity." If "tbl_MailboxStoreMap.RequiredSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Server

Property Name	Value
Description:	The name of the server on which the mailbox store resides.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Server
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Server." If "tbl_MailboxStoreMap.Server" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ServiceAlias

Property Name	Value
Description:	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServiceAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServiceAlias." If "tbl_MailboxStoreMap.ServiceAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ServicePassword

Property Name	Value
Description:	The password for a service to use to logon to mailbox store for message retrieval.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServicePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServicePassword." If "tbl_MailboxStoreMap.ServicePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.137. csp_MailboxStoreMapDelete

Deletes a MailboxStoreMap object from tbl_MailboxStoreMap as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_MailboxStoreMapDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MailboxStoreMap object was not found. The names of the object (Mailbox store map), table (tbl_MailboxStoreMap), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MailboxStoreMap), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.138. csp_MailboxStoreMapModify

Updates the attributes of a MailboxStoreMap object based on the values passed in via the parameters. The @ObjectId parameter identifies the MailboxStoreMap object that is updated.

Additional Information

For a MailboxStoreType of "WebDav," a ServiceAlias, ServicePassword and Server is required. (It is possible to set WebDAV with no password, but Connection requires it.)

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@DbInstance	In	inherit	lvarchar (256 characters)	The name of the dbinstance on which the mailbox store resides.
Optional	@DialString	In	inherit	nvarchar (40 characters)	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	A descriptive name for the Message Store.
Optional	@MailboxStoreType	In	inherit	int (4 bytes)	The type of mailbox store (e.g., UMSS).
Optional	@MailDatabase	In	inherit	lvarchar (512 characters)	The name of the mailbox database, such as "UnityMbxDb1."
Optional	@Mounted	In	inherit	smallint (2 bytes)	A flag indicating whether the mailbox store is mounted.
Optional	@RequiredSecurity	In	inherit	int (4 bytes)	The method of encryption that Cisco Unity Connection will use on a mailstore connection.
Optional	@Server	In	inherit	lvarchar (256 characters)	The name of the server on which the mailbox store resides.
Optional	@ServiceAlias	In	inherit	lvarchar (256 characters)	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.
Optional	@ServicePassword	In	inherit	varchar (254 characters)	The password for a service to use to logon to mailbox store for message retrieval.

Exceptions

csp_MailboxStoreMapModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MailboxStoreMap object was not found. The names of the object (Mailbox store map), table (tbl_MailboxStoreMap), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DbInstance

Property Name	Value
Description:	The name of the dbinstance on which the mailbox store resides.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DbInstance
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DbInstance." If "tbl_MailboxStoreMap.DbInstance" can be NULL, then explicit NULL is allowed.
Default Value:	ciscounity
Direction:	In
Update Column Value From Parameter:	True

@DialString

Property Name	Value
Description:	The number dialed by Unity Connection to access the Cisco Unified MeetingPlace Express system.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DialString
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DialString." If "tbl_MailboxStoreMap.DialString" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	A descriptive name for the Message Store.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.DisplayName." If "tbl_MailboxStoreMap.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MailboxStoreType

Property Name	Value
Description:	The type of mailbox store (e.g., UMSS).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailboxStoreType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailboxStoreType
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailboxStoreType." If "tbl_MailboxStoreMap.MailboxStoreType" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MailDatabase

Property Name	Value
Description:	The name of the mailbox database, such as "UnityMbxDb1."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.MailDatabase
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (512 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.MailDatabase." If "tbl_MailboxStoreMap.MailDatabase" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Mounted

Property Name	Value
Description:	A flag indicating whether the mailbox store is mounted.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Mounted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Mounted." If "tbl_MailboxStoreMap.Mounted" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MailboxStore object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RequiredSecurity

Property Name	Value
Description:	The method of encryption that Cisco Unity Connection will use on a mailstore connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.RequiredSecurity
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	MailstoreConnectionEncryption
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.RequiredSecurity." If "tbl_MailboxStoreMap.RequiredSecurity" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Server

Property Name	Value
Description:	The name of the server on which the mailbox store resides.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.Server
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.Server." If "tbl_MailboxStoreMap.Server" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ServiceAlias

Property Name	Value
Description:	The unique text name (alias) for a service to use to logon to mailbox store for message retrieval.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServiceAlias
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServiceAlias." If "tbl_MailboxStoreMap.ServiceAlias" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ServicePassword

Property Name	Value
Description:	The password for a service to use to logon to mailbox store for message retrieval.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ServicePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ServicePassword." If "tbl_MailboxStoreMap.ServicePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.139. csp_MailboxStoreQuotaGet

Retrieves the warn, receive, and send quotas from a UMSS mail database.

Additional Information

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The mail store from which to retrieve attribute information.
Optional	@AuditAlias	In	explicit-withdefault	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	explicit-withdefault	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Receive	Out	ignore	int (4 bytes)	The mailbox size (in bytes) receive limit.
Optional	@Send	Out	ignore	int (4 bytes)	The mailbox size (in bytes) send limit.
Optional	@Warn	Out	ignore	int (4 bytes)	The mailbox size (in bytes) warning limit.

Exceptions

csp_MailboxStoreQuotaGet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MailboxStoreObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "UnityDirDb".
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "UnityDirDb".
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The mail store from which to retrieve attribute information.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Receive

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Send

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@Warn

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.140. csp_MailboxStoreQuotaSet

Sets the warn, receive, and send quotas for a mail database.

Additional Information

The parameters @MailboxStoreObjectId, @Receive, @Send, and @Warn must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MailboxStoreObjectId	In	inherit	char (36 characters)	The mail store for which to set the attribute information.
Required	@Receive	In	ignore	int (4 bytes)	The mailbox size (in bytes) receive limit.
Required	@Send	In	ignore	int (4 bytes)	The mailbox size (in bytes) send limit.
Required	@Warn	In	ignore	int (4 bytes)	The mailbox size (in bytes) warning limit.
Optional	@AuditAlias	In	explicit-with-default	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	explicit-with-default	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MailboxStoreQuotaSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MailboxStoreObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The MailboxStore object specified by the @MailboxStoreObjectId was not found. The names of the object (Mailbox store), table (tbl_MailboxStoreMap), and column (MailboxStoreObjectId) are included with the exception message.
1037	EXCEPTION_MAILSTORE_NOT_MOUNTED	The specified mailstore is not currently mounted.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "UnityDirDb".
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "UnityDirDb".
Default Value:	'UnityDirDb'
Direction:	In
Update Column Value From Parameter:	False

@MailboxStoreObjectId

Property Name	Value
Description:	The mail store for which to set the attribute information.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MailboxStoreMap.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MailboxStoreMap.ObjectId." If "tbl_MailboxStoreMap.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Receive

Property Name	Value
Description:	The mailbox size (in bytes) receive limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Send

Property Name	Value
Description:	The mailbox size (in bytes) send limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Warn

Property Name	Value
Description:	The mailbox size (in bytes) warning limit.
Notes:	A value of -1 indicates this size is unlimited.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.141. csp_MediaPortCreate

Creates a new MediaPort object by inserting a new row into tbl_MediaPort.

Additional Information

Parameters @MediaPortGroupId and @VmsServerObjectId must be provided.

Device indexes (SkinnyTSPDeviceIndex and RTPWavDeviceId for Skinny integration, or DialogicTSPDeviceIndex for Dialogic integration) are assigned numbers sequentially, starting at zero. A search is made for lowest SkinnyTSPDeviceIndex and RTPWavDeviceId, or DialogicTSPDeviceIndex on the VMS Server. Numbering starts at zero and any gaps found in the number sequence will be filled in. For Skinny integrations, a check is made to ensure that the number generated for the SkinnyTSPDeviceIndex and RTPWavDeviceId does not exceed the total number of devices as specified by the values of tbl_VMSServer.TotalSkinnyDevices and tbl_VMSServer.TotalRTPWavDevices. If it does exceed the total number of devices, an exception is thrown.

Port numbers are assigned numbers sequentially, starting at one. Like device indexes, any gaps in the numbering sequence of the port numbers will be filled in.

If the integration type is Skinny (TelephonyIntegrationMethodEnum = 1), SkinnyDoMediaEncryption is set based on the value of SkinnySecurityModeEnum. If SkinnySecurityModeEnum is set to either "Authenticated" or "Encrypted," SkinnyDoMediaEncryption is set to 1 (Encrypted).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MediaPortGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPortGroup object to which this port belongs.
Required	@VmsServerObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSServer object to which this line belongs.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CapAnswer	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of answering calls.
Optional	@CapDeliverAmis	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of delivering AMIS messages.
Optional	@CapEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is enabled during normal operation.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CapMWI	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of turning MWIs on and off.
Optional	@CapNotification	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of notifying subscribers of messages.
Optional	@CapTrapConnection	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of enabling subscribers to use the phone as a recording and playback device in Cisco Unity Connection web applications and e-mail clients.
Optional	@Extension	In	inherit	varchar (128 characters)	The dialable number (extension) of this line/port.
Optional	@HuntOrder	In	inherit	smallint (2 bytes)	The position of this line in the hunt group as configured on the switch, with the highest numbers representing the lines that are first ("use me first") in the hunt group. Ports can have the same HuntOrder, and in that case ports will be selected on a round-robin (or longest-idle) basis.
Optional	@NoLicenseCheck	In	explicit-withdefault	smallint (2 bytes)	Set to 1 to circumvent licensing check.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.
Optional	@PortNumInGroup	In	explicit-withdefault	smallint (2 bytes)	The port number of this line as assigned by Cisco Unity Connection.
Optional	@SkinnyDeviceCertificate	In	explicit-withdefault	lvarchar (8000 characters)	The X.509 certificate for this device as a PEM format string (base-64 encoded).
Optional	@SkinnyDevicePrivateKey	In	explicit-withdefault	lvarchar (8000 characters)	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Optional	@SkinnySecurityModenum	In	inherit	smallint (2 bytes)	The security mode used for Skinny protocol sessions.

Exceptions

csp_MediaPortCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@MediaPortGroupObjectId and @VmsServerObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	A MediaPortGroup object with a TelephonyIntegrationMethodEnum matching @TelephonyIntegrationMethodEnum was not found. The names of the object (Media port group), table (tbl_MediaPortGroup), and column (ObjectId) are included with the exception message.
1011	EXCEPTION_SPECIAL_MEDIADVICE_LIMITEXCEEDED	There are two conditions that can cause EXCEPTION_SPECIALMEDIADVICE_LIMITEXCEEDED to be thrown: 1. The numbering of SkinnyTSPDevices exceeds the total number of devices as specified by tbl_VmsServer.TotalSkinnyTSPDevices. The name of the parameter used in the calculation of the SkinnyTSPDeviceIndex is included with the exception message. 2. The numbering of RTPWavDevices exceeds the total number of devices as specified by tbl_VmsServer.TotalRTPWavDevices. The name of the parameter used in the calculation of the RTPWavDeviceIndex is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CapAnswer

Property Name	Value
Description:	A flag indicating whether the media port is capable of answering calls.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapAnswer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapAnswer." If "tbl_MediaPort.CapAnswer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapDeliverAmis

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of delivering AMIS messages.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapDeliverAmis
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapDeliverAmis." If "tbl_MediaPort.CapDeliverAmis" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapEnabled

Property Name	Value
Description:	A flag indicating whether the media port is enabled during normal operation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapEnabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapEnabled." If "tbl_MediaPort.CapEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@CapMWI

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of turning MWIs on and off.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapMWI

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapMWI." If "tbl_MediaPort.CapMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapNotification

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of notifying subscribers of messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapNotification
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapNotification." If "tbl_MediaPort.CapNotification" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapTrapConnection

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of enabling subscribers to use the phone as a recording and playback device in Cisco Unity Connection web applications and e-mail clients.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapTrapConnection
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapTrapConnection." If "tbl_MediaPort.CapTrapConnection" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Extension

Property Name	Value
Description:	The dialable number (extension) of this line/port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.Extension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.Extension." If "tbl_MediaPort.Extension" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@HuntOrder

Property Name	Value
Description:	The position of this line in the hunt group as configured on the switch, with the highest numbers representing the lines that are first ("use me first") in the hunt group. Ports can have the same HuntOrder, and in that case ports will be selected on a round-robin (or longest-idle) basis.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.HuntOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.HuntOrder." If "tbl_MediaPort.HuntOrder" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupObjectId

Property Name	Value
Description:	The unique identifier of the MediaPortGroup object to which this port belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.MediaPortGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.MediaPortGroupObjectId." If "tbl_MediaPort.MediaPortGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NoLicenseCheck

Property Name	Value
Description:	Set to 1 to circumvent licensing check.
Notes:	License checks are performed in the background as well, this is only for temporarily adding ports before a license is purchased.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.ObjectId." If "tbl_MediaPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PortNumInGroup

Property Name	Value
Description:	The port number of this line as assigned by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.PortNumInGroup
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "NULL."
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SkinnyDeviceCertificate

Property Name	Value
Description:	The X.509 certificate for this device as a PEM format string (base-64 encoded).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.SkinnyDeviceCertificate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "NULL."
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SkinnyDevicePrivateKey

Property Name	Value
Description:	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.SkinnyDevicePrivateKey
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "NULL."
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SkinnySecurityModeEnum

Property Name	Value
Description:	The security mode used for Skinny protocol sessions.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.SkinnySecurityModeEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SkinnySecurityMode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.SkinnySecurityModeEnum." If "tbl_MediaPort.SkinnySecurityModeEnum" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@VmsServerObjectId

Property Name	Value
Description:	The unique identifier of the VMSServer object to which this line belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.VmsServerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.VmsServerObjectId." If "tbl_MediaPort.VmsServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.142. csp_MediaPortDelete

Deletes a MediaPort object from tbl_MediaPort as specified by the @ObjectId parameter.

Additional Information

References to notification MWI objects are removed prior to deleting the MediaPort.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaPortDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaPort object was not found. The names of the object (Media port), table (tbl_MediaPort), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaPort), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.ObjectId." If "tbl_MediaPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.143. csp_MediaPortGroup_SuggestDisplayName

Autogenerates the default display name for a MediaPortGroup.

Additional Information

This procedure is used by the Phone System Integration Create Wizard to create a useful default name for the media port group. The user has the ability to change the name if they desire through the wizard. This procedure is not called directly by a client, but rather is called by csp_MediaPortGroupCreate if NULL is passed for the MediaPortGroup.DisplayName.

The root of the suggested port group name is derived differently depending on a few factors:

- * If @Root is NULL and the new port group is being created based on copying an existing port group -- the suggested DisplayName will be the display name of the specified port group stripped of any trailing digits. For example, if the existing port group has DisplayName "PortGroup-1", the root of the suggested name will be "PortGroup-".
- * If @Root is NULL and @MediaSwitchObjectId contains a valid Media Switch -- the suggested DisplayName will be the display name of the specified MediaSwitch with a dash appended.
- * If @Root is not passed in and both @MediaSwitchObjectId and @NamedLikeMediaPortGroupObjectId are NULL -- the suggested DisplayName will be "PortGroup."

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	Out	inherit	nvarchar (64 characters)	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@MediaSwitchObjectId	In	ignore	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Optional	@NamedLikeMediaPortGroupObjectId	In	ignore	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Optional	@Root	In	ignore	nvarchar (64 characters)	The preferred name for an object such as a user, distribution list, personal contact, credential policy, etc. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Exceptions

csp_MediaPortGroup_SuggestDisplayName will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitchModel object was not found. The names of the parameter (@MediaSwitchModelObjectId), table (tbl_MediaSwitchModel), and column (ObjectId) are included with the exception message.

Parameter Properties

@DisplayName

Property Name	Value
Description:	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DisplayName." If "tbl_MediaPortGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@NamedLikeMediaPortGroupObjectid

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Root

Property Name	Value
Description:	The preferred name for an object such as a user, distribution list, personal contact, credential policy, etc. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

6.144. csp_MediaPortGroupCodecCreate

Create a row in tbl_MediaPortGroupCodec

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@MediaPortGroupObjec tId	In	inherit	char (36 characters)	The unique identifier of the MediaPortGroup object that is mapped to the specified RtpCodecDef.
Optional	@ObjectId	Out	inherit	char (36 characters)	Primary key
Optional	@Preference	In	inherit	int (4 bytes)	Preference ranking for this codec relative to other codecs supported for the port group. Lowest value of Preference is the most preferred.
Optional	@PreferredPacketSizeM s	In	inherit	int (4 bytes)	Specifies the default packet size (in milliseconds) when negotiating this codec for SIP. The setting is used in the following situations: 1) No incoming SDP ptime attribute in incoming SDP offer. 2) Cisco Unity Connection initiated SDP offer. If the other party in the SIP negotiation provides a ptime attribute in the SDP before Cisco Unity Connection has a chance to do it, Cisco Unity Connection honors the request and this setting does not come into play.
Optional	@RtpCodecDefObjectId	In	inherit	char (36 characters)	The unique identifier of the RtpCodecDefinition object that is mapped to the specified MediaPortGroup.

Exceptions

csp_MediaPortGroupCodecCreate does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupObjectId

Property Name	Value
Description:	The unique identifier of the MediaPortGroup object that is mapped to the specified RtpCodecDef.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.MediaPortGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.MediaPortGroupObjectId." If "tbl_MediaPortGroupCodec.MediaPortGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Primary key
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.ObjectId." If "tbl_MediaPortGroupCodec.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Preference

Property Name	Value
Description:	Preference ranking for this codec relative to other codecs supported for the port group. Lowest value of Preference is the most preferred.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.Preference
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.Preference." If "tbl_MediaPortGroupCodec.Preference" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PreferredPacketSizeMs

Property Name	Value
Description:	Specifies the default packet size (in milliseconds) when negotiating this codec for SIP. The setting is used in the following situations: 1) No incoming SDPptime attribute in incoming SDP offer. 2) Cisco Unity Connection initiated SDP offer. If the other party in the SIP negotiation provides aptime attribute in the SDP before Cisco Unity Connection has a chance to do it, Cisco Unity Connection honors the request and this setting does not come into play.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.PreferredPacketSizeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RTTPPacketSizeMs
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.PreferredPacketSizeMs." If "tbl_MediaPortGroupCodec.PreferredPacketSizeMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RtpCodecDefObjectId

Property Name	Value
Description:	The unique identifier of the RtpCodecDefinition object that is mapped to the specified MediaPortGroup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.RtpCodecDefObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.RtpCodecDefObjectId." If "tbl_MediaPortGroupCodec.RtpCodecDefObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.145. csp_MediaPortGroupCodecDelete

Delete a row in tbl_MediaPortGroupCodec

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Primary key
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_MediaPortGroupCodecDelete does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Primary key
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.ObjectId." If "tbl_MediaPortGroupCodec.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.146. csp_MediaPortGroupCodecModify

Modify a row in tbl_MediaPortGroupCodec

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	Primary key
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@MediaPortGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPortGroup object that is mapped to the specified RtpCodecDef.
Optional	@Preference	In	inherit	int (4 bytes)	Preference ranking for this codec relative to other codecs supported for the port group. Lowest value of Preference is the most preferred.
Optional	@PreferredPacketSizes	In	inherit	int (4 bytes)	Specifies the default packet size (in milliseconds) when negotiating this codec for SIP. The setting is used in the following situations: 1) No incoming SDP ptime attribute in incoming SDP offer. 2) Cisco Unity Connection initiated SDP offer. If the other party in the SIP negotiation provides a ptime attribute in the SDP before Cisco Unity Connection has a chance to do it, Cisco Unity Connection honors the request and this setting does not come into play.
Optional	@RtpCodecDefObjectId	In	inherit	char (36 characters)	The unique identifier of the RtpCodecDefinition object that is mapped to the specified MediaPortGroup.

Exceptions

csp_MediaPortGroupCodecModify does not throw any exceptions.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:

Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupObjectld

Property Name	Value
Description:	The unique identifier of the MediaPortGroup object that is mapped to the specified RtpCodecDef.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.MediaPortGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.MediaPortGroupObjectId." If "tbl_MediaPortGroupCodec.MediaPortGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	Primary key
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.ObjectId." If "tbl_MediaPortGroupCodec.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Preference

Property Name	Value
Description:	Preference ranking for this codec relative to other codecs supported for the port group. Lowest value of Preference is the most preferred.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.Preference
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.Preference." If "tbl_MediaPortGroupCodec.Preference" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PreferredPacketSizeMs

Property Name	Value
Description:	Specifies the default packet size (in milliseconds) when negotiating this codec for SIP. The setting is used in the following situations: 1) No incoming SDPptime attribute in incoming SDP offer. 2) Cisco Unity Connection initiated SDP offer. If the other party in the SIP negotiation provides aptime attribute in the SDP before Cisco Unity Connection has a chance to do it, Cisco Unity Connection honors the request and this setting does not come into play.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.PreferredPacketSizeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	RTTPPacketSizeMs
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.PreferredPacketSizeMs." If "tbl_MediaPortGroupCodec.PreferredPacketSizeMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RtpCodecDefObjectId

Property Name	Value
Description:	The unique identifier of the RtpCodecDefinition object that is mapped to the specified MediaPortGroup.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupCodec.RtpCodecDefObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupCodec.RtpCodecDefObjectId." If "tbl_MediaPortGroupCodec.RtpCodecDefObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.147. csp_MediaPortGroupCreate

Creates a new MediaPortGroup object by inserting a new row into tbl_MediaPortGroup. The new MediaPortGroup object is created by one of three methods: either from a template (tbl_MediaPortGroupTemplate), an existing MediaPortGroup object or from scratch based on the values contained in the input parameters.

Additional Information

The parameter @MediaSwitchObjectId must be provided.

If @DisplayName is NULL, a name will be automatically generated by calling csp_MediaPortGroup_SuggestDisplayName. See csp_MediaPortGroup_SuggestDisplayName. If the integration method is PIMG and the new media port group is not being copied from an existing port group, the suggested name will begin with "PIMG-". If the new media port group is being copied from an existing port group, then the suggested name will be derived from that of the port group that is copied.

This stored procedure is different than most 'Create' stored procedures in that it doesn't create a new instance of an object based solely on the information from input parameters. Rather it creates a new MediaPortGroup from either a template (tbl_MediaPortGroupTemplate), copying an existing MediaPortGroup object or from scratch based on the information from the input parameters.

To create a new MediaPortGroup from a template, provide the target tbl_MediaPortGroupTemplate.ObjectId via the @MediaPortGroupTemplateObjectId parameter. This uses csp_private_MediaPortGroupCreateFromTemplate to create the new MediaPortGroup object from the template. If an input parameter contains a non_NULL or non-Default value, it will override the value of the corresponding template column value.

To create a new MediaPortGroup from an existing MediaPortGroup object, provide the ObjectId of the MediaPortGroup object to copy via the @CopyThisMediaPortGroupObjectId. If an input parameter contains a non_NULL or non-Default value, it will override the value of the corresponding column value.

When creating a new MediaPortGroup from an existing MediaPortGroup object, it is mandatory that the MediaSwitch is the same for both the MediaPortGroup that is copied and the new MediaPortGroup.

If both @MediaPortGroupTemplateObjectId and @CopyThisMediaPortGroupObjectId parameters are NULL, a new MediaPortGroup object is created based on the information contained in the input parameters.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to which this MediaPortGroup belongs. The MediaSwitch represents the PBX/switch at the other end of the phone lines.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AgcTargetDB	In	inherit	smallint (2 bytes)	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CcmDoAutoFailback	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Optional	@CopyThisMediaPortGroupObjectId	In	ignore	char (36 characters)	Optional object from which to create new MediaPortGroup.
Optional	@DelayBeforeOpeningMs	In	inherit	smallint (2 bytes)	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Optional	@DisplayName	In	ignore	nvarchar (64 characters)	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfDialInterDigitDelayMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Optional	@EnableAGC	In	ignore	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Optional	@EnableMWI	In	inherit	smallint (2 bytes)	A flag indicating whether this port group can transmit message waiting indicator (MWI) on/off messages to the switch.
Optional	@MediaPortGroupTemplateObjectId	In	inherit	char (36 characters)	Optional template from which to create the new MediaPortGroup.
Optional	@MwiMaxConcurrentRequests	In	inherit	smallint (2 bytes)	The maximum number of MWI requests that can be in progress at any instant.
Optional	@MwiMinRequestIntervalMs	In	inherit	int (4 bytes)	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MwiOffCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).
Optional	@MwiOnCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Optional	@MwiReqPortSpecific	In	inherit	smallint (2 bytes)	A flag indicating whether MWI requests require a MediaPort.
Optional	@MwiRetryCountOnSuccess	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Optional	@MwiRetryIntervalOnSuccessMs	In	inherit	smallint (2 bytes)	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see MWIRetryIntervalCountOnSuccess.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Optional	@OutgoingGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Optional	@OutgoingPostDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) after dialing an outgoing call.
Optional	@OutgoingPreDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) before dialing.
Optional	@PortNumMax	In	inherit	int (4 bytes)	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Optional	@SipAuthenticateAsUser	In	inherit	nvarchar (64 characters)	The user name used for SIP authentication.
Optional	@SipAuthenticatePassword	In	inherit	lvarchar (256 characters)	The password to use during SIP authentication.
Optional	@SipContactLineNumber	In	inherit	nvarchar (64 characters)	The dialable (extension) number of the lines in this group, i.e., pilot number.
Optional	@SipDoAuthenticate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SipRegisterWithProxy Server	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Optional	@SipTransportProtocol Enum	In	inherit	smallint (2 bytes)	The transport protocol Cisco Unity Connection should use for the SIP integration.
Optional	@SkinnyDevicePrefix	In	inherit	nvarchar (48 characters)	The prefix Cisco Unity Connection uses to generate Skinny device name for ports belonging to this group.
Optional	@TelephonyIntegration MethodEnum	In	inherit	smallint (2 bytes)	The method used by lines in this group to integrate with the switch.
Optional	@WaitForCallInfoMs	In	inherit	int (4 bytes)	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.

Exceptions

csp_MediaPortGroupCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MediaSwitchObjectId is NULL. The name of the missing parameter is included with the exception message.
1003	EXCEPTION_PARAMETER_INVALID	The values of @MediaPortGroupTemplateObjectId and @CopyThisMediaPortGroupObjectId are both non-NULL. One of these parameters must contain a NULL value. The names of the missing parameters and their respective values (GUID) are included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are three conditions that can cause a Object Not found exception to be thrown:</p> <ol style="list-style-type: none"> 1. The target MediaPortGroup that is to be copied, which is specified by @CopyThisMediaPortGroupObjectId was not found. The names of the object (Media port group), table (tbl_MediaPortGroup), and column (ObjectId) are included with the exception message. 2. The MediaSwitch specified by @MediaSwitchObjectId either was not found or does not match the MediaSwitch associated with the target MediaPortGroup that is to be copied. The names of the object (Media port group), table (tbl_MediaPortGroup), and column (MediaSwitchObjectId) are included with the exception message. 3. From csp_private_MediaPortGroupCreateFromTemplate: The MediaPortGroupTemplate specified by the @MediaPortGroupTemplateObjectId was not found. The names of the object (Media port group template), table (tbl_MediaPortGroupTemplate), and column (MediaPortGroupTemplateObjectId) are included with the exception message.

Parameter Properties

@AgcTargetDB

Property Name	Value
Description:	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.AgcTargetDB
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.AgcTargetDB." If "tbl_MediaPortGroup.AgcTargetDB" can be NULL, then explicit NULL is allowed.
Default Value:	-26
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CcmDoAutoFailback

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.CcmDoAutoFailback
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.CcmDoAutoFailback." If "tbl_MediaPortGroup.CcmDoAutoFailback" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CopyThisMediaPortGroupObjectId

Property Name	Value
Description:	Optional object from which to create new MediaPortGroup.
Notes:	If present and the objectId of the MediaPortGroup specified by this parameter is found in tbl_MediaPortGroup, the new MediaPortGroup will be created using the values of this object, which may be overridden via the input parameters.
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DelayBeforeOpeningMs

Property Name	Value
Description:	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DelayBeforeOpeningMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DelayBeforeOpeningMs." If "tbl_MediaPortGroup.DelayBeforeOpeningMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	If NULL, autogenerate a "suggested" display name for the port group.
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfDialInterDigitDelayMs

Property Name	Value
Description:	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DtmfDialInterDigitDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DtmfDialInterDigitDelayMs." If "tbl_MediaPortGroup.DtmfDialInterDigitDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@EnableAGC

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableMWI

Property Name	Value
Description:	A flag indicating whether this port group can transmit message waiting indicator (MWI) on/off messages to the switch.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.EnableMWI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.EnableMWI." If "tbl_MediaPortGroup.EnableMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupTemplateObjectId

Property Name	Value
Description:	Optional template from which to create the new MediaPortGroup.
Notes:	If present and the objectId of the template specified by this parameter is found in tbl_MediaPortGroupTemplate, the new MediaPortGroup will be created using the values of the template, which may be overridden via the input parameters.
Business Rules:	Must exist in vw_MediaPortGroupTemplate
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MediaPortGroupTemplateObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MediaPortGroupTemplateObjectId." If "tbl_MediaPortGroup.MediaPortGroupTemplateObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to which this MediaPortGroup belongs. The MediaSwitch represents the PBX/switch at the other end of the phone lines.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MediaSwitchObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MediaSwitchObjectId." If "tbl_MediaPortGroup.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MwiMaxConcurrentRequests

Property Name	Value
Description:	The maximum number of MWI requests that can be in progress at any instant.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiMaxConcurrentRequests
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiMaxConcurrentRequests." If "tbl_MediaPortGroup.MwiMaxConcurrentRequests" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiMinRequestIntervalMs

Property Name	Value
Description:	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaPortGroup.MwiMinRequestIntervalMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiMinRequestIntervalMs." If "tbl_MediaPortGroup.MwiMinRequestIntervalMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiOffCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiOffCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiOffCode." If "tbl_MediaPortGroup.MwiOffCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiOnCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiOnCode

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiOnCode." If "tbl_MediaPortGroup.MwiOnCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiReqPortSpecific

Property Name	Value
Description:	A flag indicating whether MWI requests require a MediaPort.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiReqPortSpecific
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiReqPortSpecific." If "tbl_MediaPortGroup.MwiReqPortSpecific" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MwiRetryCountOnSuccess

Property Name	Value
Description:	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiRetryCountOnSuccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiRetryCountOnSuccess." If "tbl_MediaPortGroup.MwiRetryCountOnSuccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiRetryIntervalOnSuccessMs

Property Name	Value
Description:	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see MWIRetryIntervalCountOnSuccess.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs." If "tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.ObjectId." If "tbl_MediaPortGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@OutgoingGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingGuardTimeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingGuardTimeMs." If "tbl_MediaPortGroup.OutgoingGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@OutgoingPostDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) after dialing an outgoing call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingPostDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingPostDialDelayMs." If "tbl_MediaPortGroup.OutgoingPostDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@OutgoingPreDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) before dialing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingPreDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingPreDialDelayMs." If "tbl_MediaPortGroup.OutgoingPreDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PortNumMax

Property Name	Value
Description:	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.PortNumMax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.PortNumMax." If "tbl_MediaPortGroup.PortNumMax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipAuthenticateAsUser

Property Name	Value
Description:	The user name used for SIP authentication.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipAuthenticateAsUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipAuthenticateAsUser." If "tbl_MediaPortGroup.SipAuthenticateAsUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipAuthenticatePassword

Property Name	Value
Description:	The password to use during SIP authentication.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipAuthenticatePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipAuthenticatePassword." If "tbl_MediaPortGroup.SipAuthenticatePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipContactLineName

Property Name	Value
Description:	The dialable (extension) number of the lines in this group, i.e., pilot number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipContactLineName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipContactLineName." If "tbl_MediaPortGroup.SipContactLineName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipDoAuthenticate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipDoAuthenticate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipDoAuthenticate." If "tbl_MediaPortGroup.SipDoAuthenticate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipRegisterWithProxyServer

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipRegisterWithProxyServer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipRegisterWithProxyServer." If "tbl_MediaPortGroup.SipRegisterWithProxyServer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipTransportProtocolEnum

Property Name	Value
Description:	The transport protocol Cisco Unity Connection should use for the SIP integration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipTransportProtocolEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SIPTransportProtocol

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipTransportProtocolEnum." If "tbl_MediaPortGroup.SipTransportProtocolEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@SkinnyDevicePrefix

Property Name	Value
Description:	The prefix Cisco Unity Connection uses to generate Skinny device name for ports belonging to this group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SkinnyDevicePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (48 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SkinnyDevicePrefix." If "tbl_MediaPortGroup.SkinnyDevicePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TelephonyIntegrationMethodEnum

Property Name	Value
Description:	The method used by lines in this group to integrate with the switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.TelephonyIntegrationMethodEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TelephonyIntegrationMethod

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.TelephonyIntegrationMethodEnum." If "tbl_MediaPortGroup.TelephonyIntegrationMethodEnum" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@WaitForCallInfoMs

Property Name	Value
Description:	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.WaitForCallInfoMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.WaitForCallInfoMs." If "tbl_MediaPortGroup.WaitForCallInfoMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.148. csp_MediaPortGroupDelete

Deletes a MediaPortGroup from tbl_MediaPortGroup as specified by the @ObjectId parameter.

Additional Information

References to notification MWI objects are removed prior to deleting the MediaPortGroup.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaPortGroupDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaPortGroup object was not found. The names of the object (Media port group), table (tbl_MediaPortGroup), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaPortGroup), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.ObjectId." If "tbl_MediaPortGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.149. csp_MediaPortGroupIPPortCreate

Creates a new MediaPortGroupIPPort object by inserting a new row into tbl_MediaPortGroupIPPort.

Additional Information

The parameters @MediaPortGroupObjectId and @VmsServerObjectId must be provided.

If @IpPort is NULL, IpPort will be automatically assigned by calling csp_MediaPortGroupIPPort_GetNextAvailablePort.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@IpPortPurposeEnum	In	inherit	smallint (2 bytes)	The purpose for which this IP port is used.
Required	@MediaPortGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPortGroup object that will open a socket using this IP port.
Required	@VmsServerObjectId	In	inherit	char (36 characters)	The unique identifier of the VMSServer object on which this IP port is located.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IpPort	In	ignore	int (4 bytes)	The IP port number.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.

Exceptions

csp_MediaPortGroupIPPortCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@IpPortPurposeEnum, @MediaPortGroupObjectId, and @VmsServerObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@IpPort

Property Name	Value
Description:	The IP port number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.IpPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IpPortPurposeEnum

Property Name	Value
Description:	The purpose for which this IP port is used.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.IpPortPurposeEnum
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	IPPortPurpose
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.IpPortPurposeEnum." If "tbl_MediaPortGroupIPPort.IpPortPurposeEnum" can be NULL, then explicit NULL is allowed.
Default Value:	500
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupObjectId

Property Name	Value
Description:	The unique identifier of the MediaPortGroup object that will open a socket using this IP port.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.MediaPortGroupObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.MediaPortGroupObjectId." If "tbl_MediaPortGroupIPPort.MediaPortGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.ObjectId." If "tbl_MediaPortGroupIPPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@VmsServerObjectId

Property Name	Value
Description:	The unique identifier of the VMSServer object on which this IP port is located.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.VmsServerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.VmsServerObjectId." If "tbl_MediaPortGroupIPPort.VmsServerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.150. csp_MediaPortGroupIPPortDelete

Deletes a MediaPortGroupIPPort object from tbl_MediaPortGroupIPPort as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaPortGroupIPPortDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaPortGroupIPPort object was not found. The names of the object (Media port group IP Port), table (tbl_MediaPortGroupIPPort), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaPortGroupIPPort), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.ObjectId." If "tbl_MediaPortGroupIPPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.151. csp_MediaPortGroupIPPortModify

Updates the attributes of a MediaPortGroupIPPort object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaPortGroupIPPort object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IpPort	In	inherit	int (4 bytes)	The IP port number.

Exceptions

csp_MediaPortGroupIPPortModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaPortGroupIPPort object was not found. The names of the object (Media port group IP Port), table (tbl_MediaPortGroupIPPort), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IpPort

Property Name	Value
Description:	The IP port number.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaPortGroupIPPort.IpPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.IpPort." If "tbl_MediaPortGroupIPPort.IpPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupIPPort object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupIPPort.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupIPPort.ObjectId." If "tbl_MediaPortGroupIPPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.152. csp_MediaPortGroupModify

Updates the attributes of a MediaPortGroup object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaPortGroup object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Optional	@AgcTargetDB	In	inherit	smallint (2 bytes)	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CcmDoAutoFailback	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Optional	@DelayBeforeOpeningMs	In	inherit	smallint (2 bytes)	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@DtmfDialInterDigitDelayMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@EnableAGC	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Optional	@EnableMWI	In	inherit	smallint (2 bytes)	A flag indicating whether this port group can transmit message waiting indicator (MWI) on/off messages to the switch.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to which this MediaPortGroup belongs. The MediaSwitch represents the PBX/switch at the other end of the phone lines.
Optional	@MwiMaxConcurrentRequests	In	inherit	smallint (2 bytes)	The maximum number of MWI requests that can be in progress at any instant.
Optional	@MwiMinRequestIntervalMs	In	inherit	int (4 bytes)	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Optional	@MwiOffCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).
Optional	@MwiOnCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Optional	@MwiReqPortSpecific	In	inherit	smallint (2 bytes)	A flag indicating whether MWI requests require a MediaPort.
Optional	@MwiRetryCountOnSuccess	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Optional	@MwiRetryIntervalOnSuccessMs	In	inherit	smallint (2 bytes)	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see MWIRetryIntervalCountOnSuccess.
Optional	@OutgoingGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Optional	@OutgoingPostDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) after dialing an outgoing call.
Optional	@OutgoingPreDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) before dialing.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@PortNumMax	In	inherit	int (4 bytes)	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Optional	@SipAuthenticateAsUser	In	inherit	nvarchar (64 characters)	The user name used for SIP authentication.
Optional	@SipAuthenticatePassword	In	inherit	lvarchar (256 characters)	The password to use during SIP authentication.
Optional	@SipContactLineName	In	inherit	nvarchar (64 characters)	The dialable (extension) number of the lines in this group, i.e., pilot number.
Optional	@SipDoAuthenticate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Optional	@SipRegisterWithProxyServer	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Optional	@SipTransportProtocolEnum	In	inherit	smallint (2 bytes)	The transport protocol Cisco Unity Connection should use for the SIP integration.
Optional	@SkinnyDevicePrefix	In	inherit	nvarchar (48 characters)	The prefix Cisco Unity Connection uses to generate Skinny device name for ports belonging to this group.
Optional	@WaitForCallInfoMs	In	inherit	int (4 bytes)	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.

Exceptions

csp_MediaPortGroupModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaPortGroup object was not found. The names of the object (Media port group), table (tbl_MediaPortGroup), and column (ObjectId) are included with the exception message.

Parameter Properties

@AgcTargetDB

Property Name	Value
Description:	The average decibel (dB) level that a recorded message should have after application of automatic gain control (AGC). This is the "nominal gain" for all recordings processed by AGC.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.AgcTargetDB
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.AgcTargetDB." If "tbl_MediaPortGroup.AgcTargetDB" can be NULL, then explicit NULL is allowed.
Default Value:	-26
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CcmDoAutoFailback

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.CcmDoAutoFailback
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.CcmDoAutoFailback." If "tbl_MediaPortGroup.CcmDoAutoFailback" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DelayBeforeOpeningMs

Property Name	Value
Description:	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DelayBeforeOpeningMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DelayBeforeOpeningMs." If "tbl_MediaPortGroup.DelayBeforeOpeningMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this MediaPortGroup. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DisplayName." If "tbl_MediaPortGroup.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DtmfDialInterDigitDelayMs

Property Name	Value
Description:	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.DtmfDialInterDigitDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.DtmfDialInterDigitDelayMs." If "tbl_MediaPortGroup.DtmfDialInterDigitDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@EnableAGC

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.EnableAGC." If "tbl_MediaPortGroup.EnableAGC" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@EnableMWI

Property Name	Value
Description:	A flag indicating whether this port group can transmit message waiting indicator (MWI) on/off messages to the switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.EnableMWI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.EnableMWI." If "tbl_MediaPortGroup.EnableMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to which this MediaPortGroup belongs. The MediaSwitch represents the PBX/switch at the other end of the phone lines.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MediaSwitchObjectId." If "tbl_MediaPortGroup.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MwiMaxConcurrentRequests

Property Name	Value
Description:	The maximum number of MWI requests that can be in progress at any instant.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiMaxConcurrentRequests
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiMaxConcurrentRequests." If "tbl_MediaPortGroup.MwiMaxConcurrentRequests" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiMinRequestIntervalMs

Property Name	Value
Description:	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiMinRequestIntervalMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiMinRequestIntervalMs." If "tbl_MediaPortGroup.MwiMinRequestIntervalMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiOffCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiOffCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiOffCode." If "tbl_MediaPortGroup.MwiOffCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiOnCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiOnCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiOnCode." If "tbl_MediaPortGroup.MwiOnCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiReqPortSpecific

Property Name	Value
Description:	A flag indicating whether MWI requests require a MediaPort.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaPortGroup.MwiReqPortSpecific
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiReqPortSpecific." If "tbl_MediaPortGroup.MwiReqPortSpecific" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MwiRetryCountOnSuccess

Property Name	Value
Description:	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.MwiRetryCountOnSuccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiRetryCountOnSuccess." If "tbl_MediaPortGroup.MwiRetryCountOnSuccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiRetryIntervalOnSuccessMs

Property Name	Value
Description:	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see MWIRetryIntervalCountOnSuccess.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs." If "tbl_MediaPortGroup.MwiRetryIntervalOnSuccessMs" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroup object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.ObjectId." If "tbl_MediaPortGroup.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@OutgoingGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingGuardTimeMs

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingGuardTimeMs." If "tbl_MediaPortGroup.OutgoingGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@OutgoingPostDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) after dialing an outgoing call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingPostDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingPostDialDelayMs." If "tbl_MediaPortGroup.OutgoingPostDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@OutgoingPreDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) before dialing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.OutgoingPreDialDelayMs
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.OutgoingPreDialDelayMs." If "tbl_MediaPortGroup.OutgoingPreDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@PortNumMax

Property Name	Value
Description:	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.PortNumMax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.PortNumMax." If "tbl_MediaPortGroup.PortNumMax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipAuthenticateAsUser

Property Name	Value
Description:	The user name used for SIP authentication.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipAuthenticateAsUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipAuthenticateAsUser." If "tbl_MediaPortGroup.SipAuthenticateAsUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipAuthenticatePassword

Property Name	Value
Description:	The password to use during SIP authentication.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipAuthenticatePassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipAuthenticatePassword." If "tbl_MediaPortGroup.SipAuthenticatePassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipContactLineName

Property Name	Value
Description:	The dialable (extension) number of the lines in this group, i.e., pilot number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipContactLineName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipContactLineName." If "tbl_MediaPortGroup.SipContactLineName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SipDoAuthenticate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipDoAuthenticate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipDoAuthenticate." If "tbl_MediaPortGroup.SipDoAuthenticate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipRegisterWithProxyServer

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipRegisterWithProxyServer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipRegisterWithProxyServer." If "tbl_MediaPortGroup.SipRegisterWithProxyServer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SipTransportProtocolEnum

Property Name	Value
Description:	The transport protocol Cisco Unity Connection should use for the SIP integration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SipTransportProtocolEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SIPTransportProtocol
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SipTransportProtocolEnum." If "tbl_MediaPortGroup.SipTransportProtocolEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@SkinnyDevicePrefix

Property Name	Value
Description:	The prefix Cisco Unity Connection uses to generate Skinny device name for ports belonging to this group.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.SkinnyDevicePrefix
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (48 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.SkinnyDevicePrefix." If "tbl_MediaPortGroup.SkinnyDevicePrefix" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@WaitForCallInfoMs

Property Name	Value
Description:	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroup.WaitForCallInfoMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroup.WaitForCallInfoMs." If "tbl_MediaPortGroup.WaitForCallInfoMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.153. csp_MediaPortGroupTemplateCreate

Creates a new MediaPortGroupTemplate object by inserting a new row into tbl_MediaPortGroupTemplate.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Copy_CCMDDoAutoFailback	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Optional	@Copy_DelayBeforeOpeningMs	In	inherit	smallint (2 bytes)	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Optional	@Copy_DTMFDialInterDigitDelayMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Optional	@Copy_EnableAGC	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Optional	@Copy_EnableMWI	In	inherit	smallint (2 bytes)	A flag indicating whether ports in this group can transmit message waiting indicator (MWI) on/off messages to the switch via inband integration method (through use of DTMF).
Optional	@Copy_MWIMinRequestIntervalMs	In	inherit	int (4 bytes)	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Copy_MWIOffCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).
Optional	@Copy_MWIONCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Optional	@Copy_MWIReqPortSpecific	In	inherit	smallint (2 bytes)	A flag indicating whether MWI requests require a MediaPort.
Optional	@Copy_MWIRetryCountOnSuccess	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Optional	@Copy_MWIRetryIntervalOnSuccessMs	In	inherit	smallint (2 bytes)	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see Copy_MWIRetryIntervalCountOnSuccess.
Optional	@Copy_OutgoingGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Optional	@Copy_OutgoingPostDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) after dialing an outgoing call.
Optional	@Copy_OutgoingPreDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) before dialing.
Optional	@Copy_PortNumMax	In	inherit	int (4 bytes)	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Optional	@Copy_SIPDoAuthenticate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Optional	@Copy_SIPRegisterWithProxyServer	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Optional	@Copy_SIPTransportProtocolEnum	In	inherit	smallint (2 bytes)	The transport protocol Cisco Unity Connection should use for the SIP integration.
Optional	@Copy_TelephonyIntegrationMethodEnum	In	inherit	smallint (2 bytes)	The method used by lines in this group to integrate with the switch.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Copy_WaitForCallInfoMs	In	inherit	int (4 bytes)	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Optional	@MediaSwitchModelObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchModel object to which this template applies.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.
Optional	@TemplateDescriptionDefault	In	inherit	nvarchar (256 characters)	A description of the MediaPortGroupTemplate to aid the user in the selection of a template for the purpose of creating a new MediaPortGroup. Information such as Cisco Unity Connection system requirements and PBX requirements are contained in this column.
Optional	@TemplateDescriptionLoc	In	inherit	nvarchar (256 characters)	The short name of template description used to retrieve the localized version of the template description from tbl_LocalizedText.
Optional	@TemplateNameDefault	In	inherit	nvarchar (256 characters)	The name/title of the template.
Optional	@TemplateNameLoc	In	inherit	nvarchar (256 characters)	The short name of template name used to retrieve the localized version of the template name from tbl_LocalizedText.

Exceptions

csp_MediaPortGroupTemplateCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Copy_CCMDDoAutoFailback

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_CCMDdoAutoFailback
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_CCMDdoAutoFailback." If "tbl_MediaPortGroupTemplate.Copy_CCMDdoAutoFailback" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_DelayBeforeOpeningMs

Property Name	Value
Description:	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs." If "tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_DTMFDialInterDigitDelayMs

Property Name	Value
Description:	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs." If "tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Copy_EnableAGC

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection should apply software-based gain control when recording messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_EnableAGC." If "tbl_MediaPortGroupTemplate.Copy_EnableAGC" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_EnableMWI

Property Name	Value
Description:	A flag indicating whether ports in this group can transmit message waiting indicator (MWI) on/off messages to the switch via inband integration method (through use of DTMF).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_EnableMWI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_EnableMWI." If "tbl_MediaPortGroupTemplate.Copy_EnableMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIMinRequestIntervalMs

Property Name	Value
Description:	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs." If "tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIOffCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIOffCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIOffCode." If "tbl_MediaPortGroupTemplate.Copy_MWIOffCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIONCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIONCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIONCode." If "tbl_MediaPortGroupTemplate.Copy_MWIONCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIReqPortSpecific

Property Name	Value
Description:	A flag indicating whether MWI requests require a MediaPort.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific." If "tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIRetryCountOnSuccess

Property Name	Value
Description:	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess." If "tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIRetryIntervalOnSuccessMs

Property Name	Value
Description:	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see Copy_MWIRetryIntervalCountOnSuccess.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs." If "tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingPostDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) after dialing an outgoing call.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingPreDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) before dialing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_PortNumMax

Property Name	Value
Description:	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_PortNumMax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_PortNumMax." If "tbl_MediaPortGroupTemplate.Copy_PortNumMax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPDoAuthenticate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate." If "tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPRegisterWithProxyServer

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer." If "tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPTransportProtocolEnum

Property Name	Value
Description:	The transport protocol Cisco Unity Connection should use for the SIP integration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SIPTransportProtocol
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum." If "tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@Copy_TelephonyIntegrationMethodEnum

Property Name	Value
Description:	The method used by lines in this group to integrate with the switch.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TelephonyIntegrationMethod
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum." If "tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_WaitForCallInfoMs

Property Name	Value
Description:	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs." If "tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchModelObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchModel object to which this template applies.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId." If "tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.ObjectId." If "tbl_MediaPortGroupTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@TemplateDescriptionDefault

Property Name	Value
Description:	A description of the MediaPortGroupTemplate to aid the user in the selection of a template for the purpose of creating a new MediaPortGroup. Information such as Cisco Unity Connection system requirements and PBX requirements are contained in this column.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateDescriptionDefault
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateDescriptionDefault." If "tbl_MediaPortGroupTemplate.TemplateDescriptionDefault" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateDescriptionLoc

Property Name	Value
Description:	The short name of template description used to retrieve the localized version of the template description from tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateDescriptionLoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateDescriptionLoc." If "tbl_MediaPortGroupTemplate.TemplateDescriptionLoc" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateNameDefault

Property Name	Value
Description:	The name/title of the template.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateNameDefault
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateNameDefault." If "tbl_MediaPortGroupTemplate.TemplateNameDefault" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateNameLoc

Property Name	Value
Description:	The short name of template name used to retrieve the localized version of the template name from tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateNameLoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateNameLoc." If "tbl_MediaPortGroupTemplate.TemplateNameLoc" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.154. csp_MediaPortGroupTemplateDelete

Deletes a MediaPortGroupTemplate object from tbl_MediaPortGroupTemplate as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaPortGroupTemplateDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaPortGroupTemplate object was not found. The names of the object (Media port group template), table (tbl_MediaPortGroupTemplate), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaPortGroupTemplate), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.ObjectId." If "tbl_MediaPortGroupTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.155. csp_MediaPortGroupTemplateModify

Updates the attributes of a MediaPortGroupTemplate object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaPortGroupTemplate object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Copy_CCMDAutoFailback	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Optional	@Copy_DelayBeforeOpeningMs	In	inherit	smallint (2 bytes)	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Optional	@Copy_DTMFDialInterDigitDelayMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Optional	@Copy_EnableAGC	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should apply software-based gain control when recording messages.
Optional	@Copy_EnableMWI	In	inherit	smallint (2 bytes)	A flag indicating whether ports in this group can transmit message waiting indicator (MWI) on/off messages to the switch via inband integration method (through use of DTMF).

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Copy_MWIMinRequestIntervalMs	In	inherit	int (4 bytes)	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Optional	@Copy_MWIOffCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).
Optional	@Copy_MWIONCode	In	inherit	nvarchar (128 characters)	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Optional	@Copy_MWIReqPortSpecific	In	inherit	smallint (2 bytes)	A flag indicating whether MWI requests require a MediaPort.
Optional	@Copy_MWIRetryCountOnSuccess	In	inherit	smallint (2 bytes)	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Optional	@Copy_MWIRetryIntervalOnSuccessMs	In	inherit	smallint (2 bytes)	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see Copy_MWIRetryIntervalCountOnSuccess.
Optional	@Copy_OutgoingGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Optional	@Copy_OutgoingPostDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) after dialing an outgoing call.
Optional	@Copy_OutgoingPreDialDelayMs	In	inherit	int (4 bytes)	The delay (in milliseconds) before dialing.
Optional	@Copy_PortNumMax	In	inherit	int (4 bytes)	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.
Optional	@Copy_SIPDoAuthenticate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Optional	@Copy_SIPRegisterWithProxyServer	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.
Optional	@Copy_SIPTransportProtocolEnum	In	inherit	smallint (2 bytes)	The transport protocol Cisco Unity Connection should use for the SIP integration.
Optional	@Copy_TelephonyIntegrationMethodEnum	In	inherit	smallint (2 bytes)	The method used by lines in this group to integrate with the switch.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Copy_WaitForCallInfoMs	In	inherit	int (4 bytes)	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Optional	@MediaSwitchModelObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchModel object to which this template applies.
Optional	@TemplateDescriptionDefault	In	inherit	nvarchar (256 characters)	A description of the MediaPortGroupTemplate to aid the user in the selection of a template for the purpose of creating a new MediaPortGroup. Information such as Cisco Unity Connection system requirements and PBX requirements are contained in this column.
Optional	@TemplateDescriptionLoc	In	inherit	nvarchar (256 characters)	The short name of template description used to retrieve the localized version of the template description from tbl_LocalizedText.
Optional	@TemplateNameDefault	In	inherit	nvarchar (256 characters)	The name/title of the template.
Optional	@TemplateNameLoc	In	inherit	nvarchar (256 characters)	The short name of template name used to retrieve the localized version of the template name from tbl_LocalizedText.

Exceptions

csp_MediaPortGroupTemplateModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaPortGroupTemplate object was not found. The names of the object (Media port group template), table (tbl_MediaPortGroupTemplate), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Copy_CCMDAutoFailback

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should automatically re-register (i.e. failback) with a higher-precedence CCM server if one becomes available. This is pertinent if a Cisco Unity Connection Skinny device is currently registered to a CCM server that is not the primary server.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_CCMDDoAutoFailback
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_CCMDDoAutoFailback." If "tbl_MediaPortGroupTemplate.Copy_CCMDDoAutoFailback" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_DelayBeforeOpeningMs

Property Name	Value
Description:	The delay (in milliseconds) after a call is connected before playing the opening greeting.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs." If "tbl_MediaPortGroupTemplate.Copy_DelayBeforeOpeningMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_DTMFDialInterDigitDelayMs

Property Name	Value
Description:	The amount of time (in milliseconds) between DTMF digits when sending DTMF to the PBX.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs." If "tbl_MediaPortGroupTemplate.Copy_DTMFDialInterDigitDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	50
Direction:	In
Update Column Value From Parameter:	True

@Copy_EnableAGC

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection should apply software-based gain control when recording messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_EnableAGC
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_EnableAGC." If "tbl_MediaPortGroupTemplate.Copy_EnableAGC" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_EnableMWI

Property Name	Value
Description:	A flag indicating whether ports in this group can transmit message waiting indicator (MWI) on/off messages to the switch via inband integration method (through use of DTMF).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_EnableMWI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_EnableMWI." If "tbl_MediaPortGroupTemplate.Copy_EnableMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIMinRequestIntervalMs

Property Name	Value
Description:	The minimum amount of time (in milliseconds) between sending MWI on/off requests to the switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs." If "tbl_MediaPortGroupTemplate.Copy_MWIMinRequestIntervalMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIOffCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to deactivate (extinguish) a message waiting indicator (MWI).

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIOffCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIOffCode." If "tbl_MediaPortGroupTemplate.Copy_MWIOffCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIONCode

Property Name	Value
Description:	The access code that Cisco Unity Connection uses to activate (light) a message waiting indicator (MWI).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIONCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	MwiCode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIONCode." If "tbl_MediaPortGroupTemplate.Copy_MWIONCode" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIReqPortSpecific

Property Name	Value
Description:	A flag indicating whether MWI requests require a MediaPort.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific." If "tbl_MediaPortGroupTemplate.Copy_MWIReqPortSpecific" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIRetryCountOnSuccess

Property Name	Value
Description:	The number of times Cisco Unity Connection should repeat activating/deactivating an MWI upon success.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess." If "tbl_MediaPortGroupTemplate.Copy_MWIRetryCountOnSuccess" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_MWIRetryIntervalOnSuccessMs

Property Name	Value
Description:	The minimum time interval (in milliseconds) between repeated transmissions of MWI on/off, see Copy_MWIRetryIntervalCountOnSuccess.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs." If "tbl_MediaPortGroupTemplate.Copy_MWIRetryIntervalOnSuccessMs" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) a port in this group must be on-hook before the Cisco Unity Connection will allow an outgoing call on that port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingPostDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) after dialing an outgoing call.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingPostDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_OutgoingPreDialDelayMs

Property Name	Value
Description:	The delay (in milliseconds) before dialing.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs." If "tbl_MediaPortGroupTemplate.Copy_OutgoingPreDialDelayMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_PortNumMax

Property Name	Value
Description:	Specifies the maximum allowable value for tbl_MediaPort.PortNumInGroup for rows in that table that belong to this port group. Value of zero means that the number of ports is unlimited, subject to any other restrictions that may apply.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_PortNumMax
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_PortNumMax." If "tbl_MediaPortGroupTemplate.Copy_PortNumMax" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPDoAuthenticate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should authenticate with the remote endpoint.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate." If "tbl_MediaPortGroupTemplate.Copy_SIPDoAuthenticate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPRegisterWithProxyServer

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection should register with a SIP proxy server.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer." If "tbl_MediaPortGroupTemplate.Copy_SIPRegisterWithProxyServer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Copy_SIPTransportProtocolEnum

Property Name	Value
Description:	The transport protocol Cisco Unity Connection should use for the SIP integration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SIPTransportProtocol
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum." If "tbl_MediaPortGroupTemplate.Copy_SIPTransportProtocolEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@Copy_TelephonyIntegrationMethodEnum

Property Name	Value
Description:	The method used by lines in this group to integrate with the switch.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	TelephonyIntegrationMethod
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum." If "tbl_MediaPortGroupTemplate.Copy_TelephonyIntegrationMethodEnum" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Copy_WaitForCallInfoMs

Property Name	Value
Description:	Number of milliseconds to wait for call information (CallerID, CalledID, etc.) to arrive after answering the call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs." If "tbl_MediaPortGroupTemplate.Copy_WaitForCallInfoMs" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchModelObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchModel object to which this template applies.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId." If "tbl_MediaPortGroupTemplate.MediaSwitchModelObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPortGroupTemplate object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.ObjectId." If "tbl_MediaPortGroupTemplate.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TemplateDescriptionDefault

Property Name	Value
Description:	A description of the MediaPortGroupTemplate to aid the user in the selection of a template for the purpose of creating a new MediaPortGroup. Information such as Cisco Unity Connection system requirements and PBX requirements are contained in this column.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateDescriptionDefault
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateDescriptionDefault." If "tbl_MediaPortGroupTemplate.TemplateDescriptionDefault" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateDescriptionLoc

Property Name	Value
Description:	The short name of template description used to retrieve the localized version of the template description from tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateDescriptionLoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateDescriptionLoc." If "tbl_MediaPortGroupTemplate.TemplateDescriptionLoc" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateNameDefault

Property Name	Value
Description:	The name/title of the template.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateNameDefault
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateNameDefault." If "tbl_MediaPortGroupTemplate.TemplateNameDefault" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TemplateNameLoc

Property Name	Value
Description:	The short name of template name used to retrieve the localized version of the template name from tbl_LocalizedText.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPortGroupTemplate.TemplateNameLoc
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPortGroupTemplate.TemplateNameLoc." If "tbl_MediaPortGroupTemplate.TemplateNameLoc" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.156. csp_MediaPortModify

Updates the attributes of a MediaPort object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaPort object that is updated.

Additional Information

This procedure does not update the SkinnyTSPDeviceIndex and RTPWavDeviceId columns in tbl_MediaPort.

SkinnyDoMediaEncryption is updated based on the value of SkinnySecurityModeEnum. If SkinnySecurityModeEnum is set to either "Authenticated" or "Encrypted," SkinnyDoMediaEncryption is set to 1 (Encrypted).

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CapAnswer	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of answering calls.
Optional	@CapDeliverAmis	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of delivering AMIS messages.
Optional	@CapEnabled	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is enabled during normal operation.
Optional	@CapMWI	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of turning MWIs on and off.
Optional	@CapNotification	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of notifying subscribers of messages.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CapTrapConnection	In	inherit	smallint (2 bytes)	A flag indicating whether the media port is capable of performing the function of enabling subscribers to use the phone as a recording and playback device in Cisco Unity Connection web applications and e-mail clients.
Optional	@Extension	In	inherit	varchar (128 characters)	The dialable number (extension) of this line/port.
Optional	@HuntOrder	In	inherit	smallint (2 bytes)	The position of this line in the hunt group as configured on the switch, with the highest numbers representing the lines that are first ("use me first") in the hunt group. Ports can have the same HuntOrder, and in that case ports will be selected on a round-robin (or longest-idle) basis.
Optional	@PortNumInGroup	In	inherit	smallint (2 bytes)	The port number of this line as assigned by Cisco Unity Connection.
Optional	@SkinnyDeviceCertificate	In	inherit	lvarchar (8000 characters)	The X.509 certificate for this device as a PEM format string (base-64 encoded).
Optional	@SkinnyDevicePrivateKey	In	inherit	lvarchar (8000 characters)	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Optional	@SkinnySecurityModeEnum	In	inherit	smallint (2 bytes)	The security mode used for Skinny protocol sessions.

Exceptions

csp_MediaPortModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaPort object was not found. The names of the object (Media port), table (tbl_MediaPort), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CapAnswer

Property Name	Value
Description:	A flag indicating whether the media port is capable of answering calls.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapAnswer
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapAnswer." If "tbl_MediaPort.CapAnswer" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapDeliverAmis

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of delivering AMIS messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapDeliverAmis
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapDeliverAmis." If "tbl_MediaPort.CapDeliverAmis" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapEnabled

Property Name	Value
Description:	A flag indicating whether the media port is enabled during normal operation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapEnabled

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapEnabled." If "tbl_MediaPort.CapEnabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@CapMWI

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of turning MWIs on and off.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapMWI
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapMWI." If "tbl_MediaPort.CapMWI" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapNotification

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of notifying subscribers of messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapNotification
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapNotification." If "tbl_MediaPort.CapNotification" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CapTrapConnection

Property Name	Value
Description:	A flag indicating whether the media port is capable of performing the function of enabling subscribers to use the phone as a recording and playback device in Cisco Unity Connection web applications and e-mail clients.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.CapTrapConnection
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.CapTrapConnection." If "tbl_MediaPort.CapTrapConnection" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@Extension

Property Name	Value
Description:	The dialable number (extension) of this line/port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.Extension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.Extension." If "tbl_MediaPort.Extension" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@HuntOrder

Property Name	Value
Description:	The position of this line in the hunt group as configured on the switch, with the highest numbers representing the lines that are first ("use me first") in the hunt group. Ports can have the same HuntOrder, and in that case ports will be selected on a round-robin (or longest-idle) basis.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.HuntOrder
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.HuntOrder." If "tbl_MediaPort.HuntOrder" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaPort object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.ObjectId." If "tbl_MediaPort.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	False

@PortNumInGroup

Property Name	Value
Description:	The port number of this line as assigned by Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.PortNumInGroup
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.PortNumInGroup." If "tbl_MediaPort.PortNumInGroup" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@SkinnyDeviceCertificate

Property Name	Value
Description:	The X.509 certificate for this device as a PEM format string (base-64 encoded).
Notes:	
Business Rules:	
Developer Notes:	Do not upd col with param value. Sproc code handles as special case.
Reference Table/Column:	tbl_MediaPort.SkinnyDeviceCertificate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.SkinnyDeviceCertificate." If "tbl_MediaPort.SkinnyDeviceCertificate" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

@SkinnyDevicePrivateKey

Property Name	Value
Description:	The RSA private key matching the public key in SkinnyDeviceCertificate in PEM format (base-64 encoded string).
Notes:	
Business Rules:	
Developer Notes:	Do not upd col with param value. Sproc code handles as special case.
Reference Table/Column:	tbl_MediaPort.SkinnyDevicePrivateKey
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (8000 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.SkinnyDevicePrivateKey." If "tbl_MediaPort.SkinnyDevicePrivateKey" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	False

@SkinnySecurityModeEnum

Property Name	Value
Description:	The security mode used for Skinny protocol sessions.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaPort.SkinnySecurityModeEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SkinnySecurityMode
Null Handling:	Inherit - inherit parameter value from "tbl_MediaPort.SkinnySecurityModeEnum." If "tbl_MediaPort.SkinnySecurityModeEnum" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.157. csp_MediaRemoteServiceCreate

Creates a new MediaRemoteService object by inserting a new row into tbl_MediaRemoteService.

Additional Information

The parameter @HostOrIPAddress must be provided.

One and only one of MediaPortGroupObjectId and MediaSwitchObjectId must be non-NULL. The other must be NULL. MediaRemoteServiceEnum is the discriminator that determines which of the two columns must be non-NULL:

- MediaRemoteServiceEnum == CCMAXL: MediaSwitchObjectId NOT NULL, MediaPortGroupObjectID NULL.
- MediaRemoteServiceEnum <> CCMAXL: MediaSwitchObjectId NULL, MediaPortGroupObjectID NOT NULL.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@HostOrIPAddress	In	inherit	lvarchar (256 characters)	The DNS name or IP address of the computer hosting the remote service.
Required	@MediaRemoteServiceEnum	In	inherit	smallint (2 bytes)	The type of IP service.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The name of the service. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@MediaPortGroupObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPortGroup object to which this row corresponds.
Optional	@MediaServerName	In	inherit	nvarchar (128 characters)	The preferred name of the media server, if applicable.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to which this row corresponds.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.
Optional	@Port	In	inherit	int (4 bytes)	The IP port at which the service is found.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Precedence	In	inherit	int (4 bytes)	A ranking of priority for rows in this table with identical [MediaSwitchObject, MediaPortGroupObjectId, MediaRemoteServiceEnum] in which connection is attempted to them, that is, as primary, secondary, etc.
Optional	@SkinnyStateMachineEnum	In	inherit	smallint (2 bytes)	A flag indicating whether this MediaPortGroup is integrated with Cisco Unified Communications Manager or Cisco CallManager Express. This is used to switch on a special state engine in the Skinny TSP for Cisco CallManager Express.
Optional	@TlsPort	In	inherit	int (4 bytes)	The IP port at which the service is found. Cisco Unity Connection must negotiate a TLS session when using this port.

Exceptions

csp_MediaRemoteServiceCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @HostOrIPAddress is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The name of the service. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.DisplayName." If "tbl_MediaRemoteService.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@HostOrIPAddress

Property Name	Value
Description:	The DNS name or IP address of the computer hosting the remote service .
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.HostOrIPAddress
Required/Optional Parameter:	Required
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.HostOrIPAddress." If "tbl_MediaRemoteService.HostOrIPAddress" can be NULL, then explicit NULL is allowed.
Default Value:	127.0.0.1
Direction:	In
Update Column Value From Parameter:	True

@MediaPortGroupObjectId

Property Name	Value
Description:	The unique identifier of the MediaPortGroup object to which this row corresponds.
Notes:	
Business Rules:	<ul style="list-style-type: none"> - MediaRemoteServiceEnum == CCMAXL: MediaSwitchObjectId NOT NULL, MediaPortGroupObjectId NULL. - MediaRemoteServiceEnum <> CCMAXL: MediaSwitchObjectId NULL, MediaPortGroupObjectId NOT NULL.
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.MediaPortGroupObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.MediaPortGroupObjectId." If "tbl_MediaRemoteService.MediaPortGroupObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaRemoteServiceEnum

Property Name	Value
Description:	The type of IP service.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.MediaRemoteServiceEnum
Required/Optional Parameter:	Required
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	MediaRemoteService
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.MediaRemoteServiceEnum." If "tbl_MediaRemoteService.MediaRemoteServiceEnum" can be NULL, then explicit NULL is allowed.
Default Value:	100
Direction:	In
Update Column Value From Parameter:	True

@MediaServerName

Property Name	Value
Description:	The preferred name of the media server, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.MediaServerName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.MediaServerName." If "tbl_MediaRemoteService.MediaServerName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to which this row corresponds.
Notes:	
Business Rules:	<ul style="list-style-type: none"> - MediaRemoteServiceEnum == CCMAXL: MediaSwitchObjectId NOT NULL, MediaPortGroupObjectID NULL. - MediaRemoteServiceEnum <> CCMAXL: MediaSwitchObjectId NULL, MediaPortGroupObjectID NOT NULL.
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.MediaSwitchObjectId." If "tbl_MediaRemoteService.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.ObjectId
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.ObjectId." If "tbl_MediaRemoteService.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Port

Property Name	Value
Description:	The IP port at which the service is found.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.Port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.Port." If "tbl_MediaRemoteService.Port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Precedence

Property Name	Value
Description:	A ranking of priority for rows in this table with identical [MediaSwitchObject, MediaPortGroupObjectId, MediaRemoteServiceEnum] in which connection is attempted to them, that is, as primary, secondary, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.Precedence
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.Precedence." If "tbl_MediaRemoteService.Precedence" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SkinnyStateMachineEnum

Property Name	Value
Description:	A flag indicating whether this MediaPortGroup is integrated with Cisco Unified Communications Manager or Cisco CallManager Express. This is used to switch on a special state engine in the Skinny TSP for Cisco CallManager Express.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.SkinnyStateMachineEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SkinnyStateMachine
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.SkinnyStateMachineEnum." If "tbl_MediaRemoteService.SkinnyStateMachineEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@TlsPort

Property Name	Value
Description:	The IP port at which the service is found. Cisco Unity Connection must negotiate a TLS session when using this port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.TlsPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.TlsPort." If "tbl_MediaRemoteService.TlsPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.158. csp_MediaRemoteServiceDelete

Deletes a MediaRemoteService object from tbl_MediaRemoteService as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaRemoteServiceDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaRemoteService object was not found. The names of the object (Media remote service), table (tbl_MediaRemoteService), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaRemoteService), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.ObjectId." If "tbl_MediaRemoteService.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.159. csp_MediaRemoteServiceModify

Updates the attributes of a MediaRemoteService object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaRemoteService object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The name of the service. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@HostOrIPAddress	In	inherit	lvarchar (256 characters)	The DNS name or IP address of the computer hosting the remote service .
Optional	@MediaServerName	In	inherit	nvarchar (128 characters)	The preferred name of the media server, if applicable.
Optional	@Port	In	inherit	int (4 bytes)	The IP port at which the service is found.
Optional	@Precedence	In	inherit	int (4 bytes)	A ranking of priority for rows in this table with identical [MediaSwitchObject, MediaPortGroupObjectId, MediaRemoteServiceEnum] in which connection is attempted to them, that is, as primary, secondary, etc.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SkinnyStateMachineEnum	In	inherit	smallint (2 bytes)	A flag indicating whether this MediaPortGroup is integrated with Cisco Unified Communications Manager or Cisco CallManager Express. This is used to switch on a special state engine in the Skinny TSP for Cisco CallManager Express.
Optional	@TlsPort	In	inherit	int (4 bytes)	The IP port at which the service is found. Cisco Unity Connection must negotiate a TLS session when using this port.

Exceptions

csp_MediaRemoteServiceModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaRemoteService object was not found. The names of the object (Media remote service), table (tbl_MediaRemoteService), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias

Property Name	Value
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The name of the service. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.DisplayName." If "tbl_MediaRemoteService.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@HostOrIPAddress

Property Name	Value
Description:	The DNS name or IP address of the computer hosting the remote service .
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.HostOrIPAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvARCHAR (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.HostOrIPAddress." If "tbl_MediaRemoteService.HostOrIPAddress" can be NULL, then explicit NULL is allowed.
Default Value:	127.0.0.1
Direction:	In
Update Column Value From Parameter:	True

@MediaServerName

Property Name	Value
Description:	The preferred name of the media server, if applicable.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.MediaServerName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.MediaServerName." If "tbl_MediaRemoteService.MediaServerName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaRemoteService object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.ObjectId." If "tbl_MediaRemoteService.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Port

Property Name	Value
Description:	The IP port at which the service is found.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.Port
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.Port." If "tbl_MediaRemoteService.Port" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@Precedence

Property Name	Value
Description:	A ranking of priority for rows in this table with identical [MediaSwitchObject, MediaPortGroupObjectId, MediaRemoteServiceEnum] in which connection is attempted to them, that is, as primary, secondary, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.Precedence
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.Precedence." If "tbl_MediaRemoteService.Precedence" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SkinnyStateMachineEnum

Property Name	Value
Description:	A flag indicating whether this MediaPortGroup is integrated with Cisco Unified Communications Manager or Cisco CallManager Express. This is used to switch on a special state engine in the Skinny TSP for Cisco CallManager Express.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.SkinnyStateMachineEnum
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	SkinnyStateMachine
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.SkinnyStateMachineEnum." If "tbl_MediaRemoteService.SkinnyStateMachineEnum" can be NULL, then explicit NULL is allowed.
Default Value:	10
Direction:	In
Update Column Value From Parameter:	True

@TlsPort

Property Name	Value
Description:	The IP port at which the service is found. Cisco Unity Connection must negotiate a TLS session when using this port.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaRemoteService.TlsPort
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaRemoteService.TlsPort." If "tbl_MediaRemoteService.TlsPort" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

6.160. csp_MediaSwitch_SuggestDisplayName

Autogenerates the default display name for a MediaSwitch.

Additional Information

The parameter @MediaSwitchModelObjectId must be provided.

This procedure is used by the Phone System Integration Create Wizard to create a useful default name for the phone system. The user has the ability to change the name if they desire through the wizard. This procedure is not called directly by a client, but rather is called by csp_MediaSwitchCreate if NULL is passed for the MediaSwitch.DisplayName.

Auditing is turned off for this stored procedure.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MediaSwitchModelObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Optional	@DisplayName	Out	inherit	nvarchar (64 characters)	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Exceptions

csp_MediaSwitch_SuggestDisplayName will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MediaSwitchModelObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitch object was not found. The names of the parameter (@MediaSwitchObjectId), table (tbl_MediaSwitch), and column (ObjectId) are included with the exception message.

Parameter Properties

@DisplayName

Property Name	Value
Description:	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.DisplayName." If "tbl_MediaSwitch.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@MediaSwitchModelObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.ObjectId." If "tbl_MediaSwitchModel.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.161. csp_MediaSwitchCreate

Creates a new MediaSwitch object by inserting a new row into tbl_MediaSwitch.

Additional Information

The parameter @MediaSwitchModelObjectId must be provided.

If @DisplayName is NULL, a name will be automatically generated by calling csp_MediaSwitch_SuggestDisplayName. See csp_MediaSwitch_SuggestDisplayName.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@MediaSwitchModelObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchModel object for this telephone switch/network.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallLoopDTMF	In	inherit	nvarchar (16 characters)	The name of the 4th Column DTMF tone used for Reject Forward Notification and Supervised Call Loop Detection.
Optional	@CallLoopForwardNotificationDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Reject Forwarded Notification is enabled.
Optional	@CallLoopGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) i.e. "guard time" used for Rejecting Forwarded Notifications and Supervised Transfer Call Loop Detection.
Optional	@CallLoopSupervisedTransferDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Supervised Transfer Call Loop Detection is enabled.
Optional	@CcmAXLPassword	In	inherit	varchar (254 characters)	The password (encrypted) for the CcmAXLUser used to connect to a AXL Web service on a Cisco Call Manager cluster.
Optional	@CcmAXLUser	In	inherit	nvarchar (128 characters)	The user name used to connect to AXL Web service on a Cisco Call Manager cluster.
Optional	@CcmCtiPassword	In	inherit	varchar (254 characters)	The password (encrypted) for the CcmCtiUser.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CcmCtiUser	In	inherit	nvarchar (128 characters)	The user name for a Call Manager user that is assigned CTI access to one or more CCM devices.
Optional	@CcmVersion	In	inherit	nvarchar (16 characters)	The product version of the Cisco Unified Communications Manager switch.
Optional	@DefaultTRaPSwitch	In	inherit	smallint (2 bytes)	Use this as default TRaP switch for administrators?
Optional	@DisplayName	In	ignore	nvarchar (64 characters)	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EnablePhoneApplications	In	inherit	smallint (2 bytes)	A flag indicating whether IP phone applications are enabled for this switch (e.g., integration).
Optional	@MwiAlwaysUpdate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will always send a "set MWI" message to the switch whenever the mailbox contents change, even if the Cisco Unity Connection database record indicates the MWI is already in the correct state.
Optional	@MwiForceOff	In	inherit	smallint (2 bytes)	A flag that indicates whether all User MWI devices falling on this phone system should be unconditionally off.
Optional	@MwiPortMemory	In	inherit	smallint (2 bytes)	A flag indicating whether the switch requires that Cisco Unity Connection send MWI "off" requests to the same PBX port as the MWI "on" requests.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.

Exceptions

csp_MediaSwitchCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @MediaSwitchModelObjectId is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallLoopDTMF

Property Name	Value
Description:	The name of the 4th Column DTMF tone used for Reject Forward Notification and Supervised Call Loop Detection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopDTMF
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (16 characters)
Custom Type:	DtmfColumn
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopDTMF." If "tbl_MediaSwitch.CallLoopDTMF" can be NULL, then explicit NULL is allowed.
Default Value:	A
Direction:	In
Update Column Value From Parameter:	True

@CallLoopForwardNotificationDetect

Property Name	Value
Description:	A flag indicating whether Reject Forwarded Notification is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopForwardNotificationDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopForwardNotificationDetect." If "tbl_MediaSwitch.CallLoopForwardNotificationDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CallLoopGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) i.e. "guard time" used for Rejecting Forwarded Notifications and Supervised Transfer Call Loop Detection.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopGuardTimeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopGuardTimeMs." If "tbl_MediaSwitch.CallLoopGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@CallLoopSupervisedTransferDetect

Property Name	Value
Description:	A flag indicating whether Supervised Transfer Call Loop Detection is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopSupervisedTransferDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopSupervisedTransferDetect." If "tbl_MediaSwitch.CallLoopSupervisedTransferDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CcmAXLPassword

Property Name	Value
Description:	The password (encrypted) for the CcmAXLUser used to connect to a AXL Web service on a Cisco Call Manager cluster.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmAXLPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmAXLPassword." If "tbl_MediaSwitch.CcmAXLPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmAXLUser

Property Name	Value
Description:	The user name used to connect to AXL Web service on a Cisco Call Manager cluster.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmAXLUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmAXLUser." If "tbl_MediaSwitch.CcmAXLUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmCtiPassword

Property Name	Value
Description:	The password (encrypted) for the CcmCtiUser.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaSwitch.CcmCtiPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmCtiPassword." If "tbl_MediaSwitch.CcmCtiPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmCtiUser

Property Name	Value
Description:	The user name for a Call Manager user that is assigned CTI access to one or more CCM devices.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmCtiUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmCtiUser." If "tbl_MediaSwitch.CcmCtiUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmVersion

Property Name	Value
Description:	The product version of the Cisco Unified Communications Manager switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmVersion
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (16 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmVersion." If "tbl_MediaSwitch.CcmVersion" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultTRaPSwitch

Property Name	Value
Description:	Use this as default TRaP switch for administrators?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.DefaultTRaPSwitch
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.DefaultTRaPSwitch." If "tbl_MediaSwitch.DefaultTRaPSwitch" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	If NULL, autogenerate a "suggested" display name for the phone system.
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnablePhoneApplications

Property Name	Value
Description:	A flag indicating whether IP phone applications are enabled for this switch (e.g., integration).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.EnablePhoneApplications
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.EnablePhoneApplications." If "tbl_MediaSwitch.EnablePhoneApplications" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchModelObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchModel object for this telephone switch/network.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MediaSwitchModelObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MediaSwitchModelObjectId." If "tbl_MediaSwitch.MediaSwitchModelObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MwiAlwaysUpdate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will always send a "set MWI" message to the switch whenever the mailbox contents change, even if the Cisco Unity Connection database record indicates the MWI is already in the correct state.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiAlwaysUpdate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiAlwaysUpdate." If "tbl_MediaSwitch.MwiAlwaysUpdate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiForceOff

Property Name	Value
Description:	A flag that indicates whether all User MWI devices falling on this phone system should be unconditionally off.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiForceOff
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiForceOff." If "tbl_MediaSwitch.MwiForceOff" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@MwiPortMemory

Property Name	Value
Description:	A flag indicating whether the switch requires that Cisco Unity Connection send MWI "off" requests to the same PBX port as the MWI "on" requests.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiPortMemory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiPortMemory." If "tbl_MediaSwitch.MwiPortMemory" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.ObjectId." If "tbl_MediaSwitch.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.162. csp_MediaSwitchDelete

Deletes a MediaSwitch object from tbl_MediaSwitch as specified by the @ObjectId parameter.

Additional Information

Before deleting the media switch, several checks are made for references to this switch by other objects that would cause delete to fail. If references are found, an error message is generated specifying exactly which object is referenced. The SA looks for these specific errors to offer the administrator to run the Delete Phone System wizard.

MediaPortGroup and MediaSwitchTrunk objects associated with this switch are also deleted. All MediaPort objects owned by the deleted MediaPortGroups will be automatically deleted by SQL via the FK Cascade Delete constraint.

References to notification MWI objects are removed prior to deleting the MediaSwitch.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaSwitchDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaSwitch object was not found. The names of the object (Media switch), table (tbl_MediaSwitch), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaSwitch), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.
1038	EXCEPTION_SWITCH_REF_SUBSCRIBER	Switch could not be deleted because it is referenced by a user.
1039	EXCEPTION_SWITCH_REF_SUBSCRIBER_TEMPLATE	Switch could not be deleted because it is referenced by a user template.
1040	EXCEPTION_SWITCH_REF_NOTIFICATION_PAGER	Switch could not be deleted because it is referenced by a pager notification device on a user or user template.
1041	EXCEPTION_SWITCH_REF_NOTIFICATION_PHONE	Switch could not be deleted because it is referenced by a phone notification device on a user or user template.
1042	EXCEPTION_SWITCH_REF_SUBSCRIBER_TRANSFER_OPTION	Switch could not be deleted because the transfer settings of a user or user template refer to it.
1043	EXCEPTION_SWITCH_REF_CALLHANDLER	Switch could not be deleted because the transfer settings of a call handler or call handler template refer to it.
1046	EXCEPTION_SWITCH_REF_NOTIFICATION_MWI	Switch could not be deleted because it is referenced by a notification mwi on a user or user template.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.ObjectId." If "tbl_MediaSwitch.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.163. csp_MediaSwitchManufacturerCreate

Creates a new MediaSwitchManufacturer object by inserting a new row into tbl_MediaSwitchManufacturer.

Additional Information

The parameter @DisplayName must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.

Exceptions

csp_MediaSwitchManufacturerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.DisplayName." If "tbl_MediaSwitchManufacturer.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.ObjectId." If "tbl_MediaSwitchManufacturer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.164. csp_MediaSwitchManufacturerDelete

Deletes a MediaSwitchManufacturer object from tbl_MediaSwitchManufacturer as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaSwitchManufacturerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaSwitchManufacturer object was not found. The names of the object (Media switch manufacturer), table (tbl_MediaSwitchManufacturer), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaSwitchManufacturer), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.ObjectId." If "tbl_MediaSwitchManufacturer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.165. csp_MediaSwitchManufacturerModify

Updates the attributes of a MediaSwitchManufacturer object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaSwitchManufacturer object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Exceptions

csp_MediaSwitchManufacturerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitchManufacturer object was not found. The names of the object (Media switch manufacturer), table (tbl_MediaSwitchManufacturer), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.DisplayName." If "tbl_MediaSwitchManufacturer.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.ObjectId." If "tbl_MediaSwitchManufacturer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.166. csp_MediaSwitchManufacturerSet

Creates a new MediaSwitchManufacturer object or updates the attributes of an existing MediaSwitchManufacturer object in tbl_MediaSwitchManufacturer.

Additional Information

The value of @ObjectId determines whether this procedure executes csp_MediaSwitchManufacturerCreate to create a new object or csp_MediaSwitchManufacturerModify to update an existing object. If @ObjectId is NULL, a new MediaSwitchManufacturer is created. Otherwise this procedure updates the attributes of an existing MediaSwitchManufacturer object specified by @ObjectId.

Business Rules

If @ObjectId is NULL, a new MediaSwitchManufacturer is created. Otherwise the attributes of an existing MediaSwitchManufacturer object specified by @ObjectId are updated.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.

Exceptions

csp_MediaSwitchManufacturerSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that can cause EXCEPTION_PARAMETER_NULL_REQUIRED to be thrown: 1. From csp_MediaSwitchManufacturerCreate: The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message. 2. From csp_MediaSwitchManufacturerModify: The value of the required parameter @ObjectId NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	From csp_MediaSwitchManufacturerModify: The specified MediaSwitchManufacturer object was not found. The names of the object (Media switch manufacturer), table (tbl_MediaSwitchManufacturer), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The preferred text name of the switch manufacturer to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.DisplayName." If "tbl_MediaSwitchManufacturer.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchManufacturer object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchManufacturer.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchManufacturer.ObjectId." If "tbl_MediaSwitchManufacturer.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.167. csp_MediaSwitchMigrate

Migrates subscribers from one media switch to another. This procedure updates the `MediaSwitchObjectId` column in the following tables by replacing the value of the `MediaSwitchObjectId` that matches the `@FromMediaSwitchObjectId` to the value of `@ToMediaSwitchObjectId`:

- * `tbl_TransferOption`
- * `tbl_UserSubscriber`
- * `tbl_NotificationMwi`
- * `tbl_NotificationDevicePager`
- * `tbl_NotificationDeviceConversation`

Additional Information

The parameters `@FromMediaSwitchObjectId` and `@ToMediaSwitchObjectId` must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FromMediaSwitchObjectId	In	ignore	char (36 characters)	Switch to migrate subscribers from.
Required	@ToMediaSwitchObjectId	In	ignore	char (36 characters)	Switch to migrate subscribers from.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

`csp_MediaSwitchMigrate` will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	<code>EXCEPTION_PARAMETER_NULL_REQUIRED</code>	The value of one of the required parameters (<code>@FromMediaSwitchObjectId</code> and <code>@ToMediaSwitchObjectId</code>) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@FromMediaSwitchObjectId

Property Name	Value
Description:	Switch to migrate subscribers from.
Notes:	An ObjectId is generated using newid().

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ToMediaSwitchObjectid

Property Name	Value
Description:	Switch to migrate subscribers from.
Notes:	An Objectid is generated using newid().
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.168. csp_MediaSwitchModelCreate

Creates a new MediaSwitchModel object by inserting a new row into tbl_MediaSwitchModel.

Additional Information

The parameter @DisplayName must be provided.

If @MediaSwitchManufacturerObjectId is NULL, this model applies to ALL switch manufacturers.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DefaultMediaSwitchDisplayName	In	inherit	nvarchar (40 characters)	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," "MD110."
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@MediaSwitchManufacturerObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.

Exceptions

csp_MediaSwitchModelCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@DefaultMediaSwitchDisplayName

Property Name	Value
Description:	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName." If "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," "MD110."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DisplayName." If "tbl_MediaSwitchModel.DisplayName" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchManufacturerObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.
Notes:	
Business Rules:	If NULL, this model applies to any switch manufacturer.
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId." If "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.ObjectId." If "tbl_MediaSwitchModel.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	

Property Name	Value
Direction:	Out
Update Column Value From Parameter:	True

6.169. csp_MediaSwitchModelDelete

Deletes a MediaSwitchModel object from tbl_MediaSwitchModel as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaSwitchModelDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaSwitchModel object was not found. The names of the object (Media switch model), table (tbl_MediaSwitchModel), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaSwitchModel), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.ObjectId." If "tbl_MediaSwitchModel.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.170. csp_MediaSwitchModelModify

Updates the attributes of a MediaSwitchModel object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaSwitchModel object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DefaultMediaSwitchDisplayName	In	inherit	nvarchar (40 characters)	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," "MD110."
Optional	@MediaSwitchManufacturerObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.

Exceptions

csp_MediaSwitchModelModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitchModel object was not found. The names of the object (Media switch model), table (tbl_MediaSwitchModel), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultMediaSwitchDisplayName

Property Name	Value
Description:	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName." If "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," " MD110."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DisplayName." If "tbl_MediaSwitchModel.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchManufacturerObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId." If "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectID

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.ObjectID
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.ObjectId." If "tbl_MediaSwitchModel.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.171. csp_MediaSwitchModelSet

Creates a new MediaSwitchModel object or updates the attributes of an existing MediaSwitchModel object in tbl_MediaSwitchModel.

Additional Information

The value of @ObjectId determines whether this procedure executes csp_MediaSwitchModelCreate to create a new object or csp_MediaSwitchModelModify to update an existing object. If @ObjectId is NULL, a new MediaSwitchModel is created. Otherwise this procedure updates the attributes of an existing MediaSwitchModel object specified by @ObjectId.

If @MediaSwitchManufacturerObjectId is NULL, this model applies to ALL switch manufacturers.

Business Rules

If @ObjectId is NULL, a new MediaSwitchModel is created. Otherwise the attributes of an existing MediaSwitchModel object specified by @ObjectId are updated.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DefaultMediaSwitchDisplayName	In	inherit	nvarchar (40 characters)	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," "MD110."
Optional	@MediaSwitchManufacturerObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.

Exceptions

csp_MediaSwitchModelSet will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that can cause EXCEPTION_PARAMETER_NULL_REQUIRED to be thrown: 1. From csp_MediaSwitchModelCreate: The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message. 2. From csp_MediaSwitchModelModify: The value of the required parameter @ObjectId NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	From csp_MediaSwitchModelModify: The specified MediaSwitchModel object was not found. The names of the object (Media switch model), table (tbl_MediaSwitchModel), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultMediaSwitchDisplayName

Property Name	Value
Description:	The default value for the display name of a media switch (tbl_MediaSwitch.DisplayName) when a MediaSwitch object of this model is created.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName." If "tbl_MediaSwitchModel.DefaultMediaSwitchDisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The text name of the switch model to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. Examples: "Unified Communications Manager," " MD110."
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.DisplayName." If "tbl_MediaSwitchModel.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchManufacturerObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitchManufacturer who manufactures this switch model.
Notes:	
Business Rules:	If NULL, this model applies to any switch manufacturer.
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId." If "tbl_MediaSwitchModel.MediaSwitchManufacturerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique identifier for a MediaSwitchModel object.
Notes:	

Property Name	Value
Business Rules:	If @ObjectId is NULL, a new MediaSwitchModel is created. Otherwise the attributes of an existing MediaSwitchModel object specified by @ObjectId are updated.
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchModel.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchModel.ObjectId." If "tbl_MediaSwitchModel.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.172. csp_MediaSwitchModify

Updates the attributes of a MediaSwitch object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaSwitch object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@CallLoopDTMF	In	inherit	nvarchar (16 characters)	The name of the 4th Column DTMF tone used for Reject Forward Notification and Supervised Call Loop Detection.
Optional	@CallLoopForwardNotificationDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Reject Forwarded Notification is enabled.
Optional	@CallLoopGuardTimeMs	In	inherit	int (4 bytes)	The amount of time (in milliseconds) i.e. "guard time" used for Rejecting Forwarded Notifications and Supervised Transfer Call Loop Detection.
Optional	@CallLoopSupervisedTransferDetect	In	inherit	smallint (2 bytes)	A flag indicating whether Supervised Transfer Call Loop Detection is enabled.
Optional	@CcmAXLPassword	In	inherit	varchar (254 characters)	The password (encrypted) for the CcmAXLUser used to connect to a AXL Web service on a Cisco Call Manager cluster.
Optional	@CcmAXLUser	In	inherit	nvarchar (128 characters)	The user name used to connect to AXL Web service on a Cisco Call Manager cluster.
Optional	@CcmCtiPassword	In	inherit	varchar (254 characters)	The password (encrypted) for the CcmCtiUser.
Optional	@CcmCtiUser	In	inherit	nvarchar (128 characters)	The user name for a Call Manager user that is assigned CTI access to one or more CCM devices.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@CcmVersion	In	inherit	nvarchar (16 characters)	The product version of the Cisco Unified Communications Manager switch.
Optional	@DefaultTRaPSwitch	In	inherit	smallint (2 bytes)	Use this as default TRaP switch for administrators?
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@EnablePhoneApplications	In	inherit	smallint (2 bytes)	A flag indicating whether IP phone applications are enabled for this switch (e.g., integration).
Optional	@MwiAlwaysUpdate	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will always send a "set MWI" message to the switch whenever the mailbox contents change, even if the Cisco Unity Connection database record indicates the MWI is already in the correct state.
Optional	@MwiForceOff	In	inherit	smallint (2 bytes)	A flag that indicates whether all User MWI devices falling on this phone system should be unconditionally off.
Optional	@MwiPortMemory	In	inherit	smallint (2 bytes)	A flag indicating whether the switch requires that Cisco Unity Connection send MWI "off" requests to the same PBX port as the MWI "on" requests.

Exceptions

csp_MediaSwitchModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitch object was not found. The names of the object (Media switch), table (tbl_MediaSwitch), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CallLoopDTMF

Property Name	Value
Description:	The name of the 4th Column DTMF tone used for Reject Forward Notification and Supervised Call Loop Detection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopDTMF
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (16 characters)
Custom Type:	DtmfColumn
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopDTMF." If "tbl_MediaSwitch.CallLoopDTMF" can be NULL, then explicit NULL is allowed.
Default Value:	A
Direction:	In
Update Column Value From Parameter:	True

@CallLoopForwardNotificationDetect

Property Name	Value
Description:	A flag indicating whether Reject Forwarded Notification is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopForwardNotificationDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopForwardNotificationDetect." If "tbl_MediaSwitch.CallLoopForwardNotificationDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CallLoopGuardTimeMs

Property Name	Value
Description:	The amount of time (in milliseconds) i.e. "guard time" used for Rejecting Forwarded Notifications and Supervised Transfer Call Loop Detection.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopGuardTimeMs
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopGuardTimeMs." If "tbl_MediaSwitch.CallLoopGuardTimeMs" can be NULL, then explicit NULL is allowed.
Default Value:	2500
Direction:	In
Update Column Value From Parameter:	True

@CallLoopSupervisedTransferDetect

Property Name	Value
Description:	A flag indicating whether Supervised Transfer Call Loop Detection is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CallLoopSupervisedTransferDetect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CallLoopSupervisedTransferDetect." If "tbl_MediaSwitch.CallLoopSupervisedTransferDetect" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@CcmAXLPassword

Property Name	Value
Description:	The password (encrypted) for the CcmAXLUser used to connect to a AXL Web service on a Cisco Call Manager cluster.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmAXLPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmAXLPassword." If "tbl_MediaSwitch.CcmAXLPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmAXLUser

Property Name	Value
Description:	The user name used to connect to AXL Web service on a Cisco Call Manager cluster.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmAXLUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmAXLUser." If "tbl_MediaSwitch.CcmAXLUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmCtiPassword

Property Name	Value
Description:	The password (encrypted) for the CcmCtiUser.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MediaSwitch.CcmCtiPassword
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (254 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmCtiPassword." If "tbl_MediaSwitch.CcmCtiPassword" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmCtiUser

Property Name	Value
Description:	The user name for a Call Manager user that is assigned CTI access to one or more CCM devices.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmCtiUser
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (128 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmCtiUser." If "tbl_MediaSwitch.CcmCtiUser" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@CcmVersion

Property Name	Value
Description:	The product version of the Cisco Unified Communications Manager switch.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.CcmVersion
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (16 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.CcmVersion." If "tbl_MediaSwitch.CcmVersion" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DefaultTRaPSwitch

Property Name	Value
Description:	Use this as default TRaP switch for administrators?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.DefaultTRaPSwitch
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.DefaultTRaPSwitch." If "tbl_MediaSwitch.DefaultTRaPSwitch" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name (e.g., "Unified Communications Manager Cluster - Seattle") of the media switch to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.DisplayName." If "tbl_MediaSwitch.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@EnablePhoneApplications

Property Name	Value
Description:	A flag indicating whether IP phone applications are enabled for this switch (e.g., integration).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.EnablePhoneApplications
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.EnablePhoneApplications." If "tbl_MediaSwitch.EnablePhoneApplications" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiAlwaysUpdate

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will always send a "set MWI" message to the switch whenever the mailbox contents change, even if the Cisco Unity Connection database record indicates the MWI is already in the correct state.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiAlwaysUpdate
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiAlwaysUpdate." If "tbl_MediaSwitch.MwiAlwaysUpdate" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiForceOff

Property Name	Value
Description:	A flag that indicates whether all User MWI devices falling on this phone system should be unconditionally off.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiForceOff
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiForceOff." If "tbl_MediaSwitch.MwiForceOff" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@MwiPortMemory

Property Name	Value
Description:	A flag indicating whether the switch requires that Cisco Unity Connection send MWI "off" requests to the same PBX port as the MWI "on" requests.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.MwiPortMemory
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.MwiPortMemory." If "tbl_MediaSwitch.MwiPortMemory" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaSwitch object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitch.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitch.ObjectId." If "tbl_MediaSwitch.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.173. csp_MediaSwitchTrunkCreate

Creates a new MediaSwitchTrunk object by inserting a new row into tbl_MediaSwitchTrunk.

Additional Information

The parameters @FromMediaSwitchObjectId and @ToMediaSwitchObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@FromMediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object on which the call originates.
Required	@ToMediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to which the call is directed.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.
Optional	@TrunkAccessCode	In	inherit	nvarchar (10 characters)	The DTMF digit sequence Cisco Unity Connection uses to transfer a call from one switching system to another (FromMediaSwitchObjectId to ToMediaSwitchObjectId).

Exceptions

csp_MediaSwitchTrunkCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@FromMediaSwitchObjectId and @ToMediaSwitchObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@FromMediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object on which the call originates.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.FromMediaSwitchObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.FromMediaSwitchObjectId." If "tbl_MediaSwitchTrunk.FromMediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.ObjectId." If "tbl_MediaSwitchTrunk.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@ToMediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to which the call is directed.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.ToMediaSwitchObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.ToMediaSwitchObjectId." If "tbl_MediaSwitchTrunk.ToMediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TrunkAccessCode

Property Name	Value
Description:	The DTMF digit sequence Cisco Unity Connection uses to transfer a call from one switching system to another (FromMediaSwitchObjectId to ToMediaSwitchObjectId).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.TrunkAccessCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.TrunkAccessCode." If "tbl_MediaSwitchTrunk.TrunkAccessCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.174. csp_MediaSwitchTrunkDelete

Deletes a MediaSwitchTrunk object from tbl_MediaSwitchTrunk as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MediaSwitchTrunkDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified MediaSwitchTrunk object was not found. The names of the object (Media switch trunk), table (tbl_MediaSwitchTrunk), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MediaSwitchTrunk), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.ObjectId." If "tbl_MediaSwitchTrunk.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.175. csp_MediaSwitchTrunkModify

Updates the Trunk Access Code attribute of a MediaSwitchTrunk object based on the values passed in via the parameters. The @ObjectId parameter identifies the MediaSwitch object that is updated.

Additional Information

The ToSwitch and FromSwitch cannot be modified.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@TrunkAccessCode	In	inherit	nvarchar (10 characters)	The DTMF digit sequence Cisco Unity Connection uses to transfer a call from one switching system to another (FromMediaSwitchObjectId to ToMediaSwitchObjectId).

Exceptions

csp_MediaSwitchTrunkModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MediaSwitchTrunk object was not found. The names of the object (Media switch trunk), table (tbl_MediaSwitchTrunk), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MediaTrunk object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.ObjectId." If "tbl_MediaSwitchTrunk.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@TrunkAccessCode

Property Name	Value
Description:	The DTMF digit sequence Cisco Unity Connection uses to transfer a call from one switching system to another (FromMediaSwitchObjectId to ToMediaSwitchObjectId).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MediaSwitchTrunk.TrunkAccessCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (10 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MediaSwitchTrunk.TrunkAccessCode." If "tbl_MediaSwitchTrunk.TrunkAccessCode" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.176. csp_MenuEntryCreate

Creates a new user input key mappings by inserting a new row into tbl_MenuEntry.

Additional Information

The parameters @CallHandlerObjectId and @TouchtoneKey must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	ignore	char (36 characters)	The unique identifier of the CallHandler object to which this menu entry belongs.
Required	@TouchtoneKey	In	inherit	nvarchar (32 characters)	The character on the touch-tone keypad that this menu entry corresponds to (*, #, 0,1...9).
Optional	@Action	In	ignore	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Locked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection ignores additional input after callers press this key. Values: 0: Additional input accepted 1: Additional input ignored; Cisco Unity Connection performs the action assigned to the key.
Optional	@TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.

Exceptions

csp_MenuEntryCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId and @TouchtoneKey) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this menu entry belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MenuEntry.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Locked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection ignores additional input after callers press this key. Values: 0: Additional input accepted 1: Additional input ignored; Cisco Unity Connection performs the action assigned to the key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MenuEntry.Locked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MenuEntry.Locked." If "tbl_MenuEntry.Locked" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TouchtoneKey

Property Name	Value
Description:	The character on the touch-tone keypad that this menu entry corresponds to (*, #, 0,1...9).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MenuEntry.TouchtoneKey
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MenuEntry.TouchtoneKey." If "tbl_MenuEntry.TouchtoneKey" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.177. csp_MenuEntryModify

Updates the attributes of a MenuEntry object based on the values passed in via the parameters. Essentially, only the Locked attribute is updated. If @TargetConversation is specified, the associated CallAction object is updated. If @TargetHandlerObjectId is specified, the associated CallAction object is updated. If @Action is not NULL, the associated CallAction object is updated. The combination of the @CallHandlerObjectId and @TouchtoneKey parameters identifies the MenuEntry object that is updated.

Additional Information

The setting of the CallHandler.OneKeDelay attribute is checked. If it is set to 0, then @Locked must be set to 1.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CallHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the CallHandler object to which this menu entry belongs.
Required	@TouchtoneKey	In	inherit	nvarchar (32 characters)	The character on the touch-tone keypad that this menu entry corresponds to (*, #, 0,1...9).
Optional	@Action	In	inherit	smallint (2 bytes)	The type of call action to take, e.g., hang-up, goto another object, etc.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Locked	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection ignores additional input after callers press this key. Values: 0: Additional input accepted 1: Additional input ignored; Cisco Unity Connection performs the action assigned to the key.
Optional	@TargetConversation	In	inherit	nvarchar (64 characters)	The name of the conversation to which the caller is routed.
Optional	@TargetHandlerObjectId	In	inherit	char (36 characters)	The unique identifier of the specific object to send along to the target conversation.

Exceptions

csp_MenuEntryModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CallHandlerObjectId and @TouchtoneKey) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are three conditions that can cause an "Object Not Found" exception to be thrown: 1. The specified MenuEntry object was not found. The names of the object (Menu entry), table (tbl_MenuEntry), and columns (CallHandlerObjectId and TouchtoneKey) are included with the exception message. 2. The Conversation object specified by @TargetConversation was not found. The names of the object (Menu entry's target conversation), table (tbl_Conversation), and column (ConversationName) are included with the exception message. 3. The Handler object specified by @TargetHandlerObjectId was not found. The names of the object (Menu entry's target handler), table (tbl_Handler), and column (ObjectId) are included with the exception message.

Parameter Properties

@Action

Property Name	Value
Description:	The type of call action to take, e.g., hang-up, goto another object, etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	CallAction
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.Action." If "tbl_CallAction.Action" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CallHandlerObjectId

Property Name	Value
Description:	The unique identifier of the CallHandler object to which this menu entry belongs.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_MenuEntry.CallHandlerObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_MenuEntry.CallHandlerObjectId." If "tbl_MenuEntry.CallHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Locked

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection ignores additional input after callers press this key. Values: 0: Additional input accepted 1: Additional input ignored; Cisco Unity Connection performs the action assigned to the key.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MenuEntry.Locked
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MenuEntry.Locked." If "tbl_MenuEntry.Locked" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@TargetConversation

Property Name	Value
Description:	The name of the conversation to which the caller is routed.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetConversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetConversation." If "tbl_CallAction.TargetConversation" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TargetHandlerObjectId

Property Name	Value
Description:	The unique identifier of the specific object to send along to the target conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_CallAction.TargetHandlerObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_CallAction.TargetHandlerObjectId." If "tbl_CallAction.TargetHandlerObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@TouchtoneKey

Property Name	Value
Description:	The character on the touch-tone keypad that this menu entry corresponds to (*, #, 0,1...9).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MenuEntry.TouchtoneKey

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MenuEntry.TouchtoneKey." If "tbl_MenuEntry.TouchtoneKey" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

6.178. csp_MessageAgingPolicyCreate

Creates a new message aging policy by inserting a new row into tbl_MessageAgingPolicy.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of this MessageAgingPolicy. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Enabled	In	inherit	smallint (2 bytes)	A flag indicating whether the policy is enabled.
Optional	@IsSystem	In	inherit	smallint (2 bytes)	A flag indicating whether this policy was created during default system configuration.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.

Exceptions

csp_MessageAgingPolicyCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @DisplayName is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The text name of this MessageAgingPolicy. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.DisplayName." If "tbl_MessageAgingPolicy.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Enabled

Property Name	Value
Description:	A flag indicating whether the policy is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.Enabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.Enabled." If "tbl_MessageAgingPolicy.Enabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsSystem

Property Name	Value
Description:	A flag indicating whether this policy was created during default system configuration.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.IsSystem
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.IsSystem." If "tbl_MessageAgingPolicy.IsSystem" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.ObjectId." If "tbl_MessageAgingPolicy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.179. csp_MessageAgingPolicyDelete

Deletes a MessageAgingPolicy object from tbl_MessageAgingPolicy as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MessageAgingPolicyDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The MessageAgingPolicy object was not found. The names of the object (Message aging policy), table (tbl_MessageAgingPolicy), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MessageAgingPolicy), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.ObjectId." If "tbl_MessageAgingPolicy.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.180. csp_MessageAgingPolicyModify

Updates the attributes of a MessageAgingPolicy object based on the values passed in via the parameters. The @ObjectId parameter identifies the MessageAgingPolicy object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The text name of this MessageAgingPolicy. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Optional	@Enabled	In	inherit	smallint (2 bytes)	A flag indicating whether the policy is enabled.
Optional	@IsSystem	In	inherit	smallint (2 bytes)	A flag indicating whether this policy was created during default system configuration.

Exceptions

csp_MessageAgingPolicyModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	<p>There are two conditions that can cause the Object Not Found exception to be thrown:</p> <ol style="list-style-type: none"> 1. The MessageAgingPolicy object was not found. The names of the object (Message aging policy), table (tbl_MessageAgingPolicy), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MessageAgingPolicy), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The text name of this MessageAgingPolicy. Used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.DisplayName." If "tbl_MessageAgingPolicy.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Enabled

Property Name	Value
Description:	A flag indicating whether the policy is enabled.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.Enabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.Enabled." If "tbl_MessageAgingPolicy.Enabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@IsSystem

Property Name	Value
Description:	A flag indicating whether this policy was created during default system configuration.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.IsSystem
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.IsSystem." If "tbl_MessageAgingPolicy.IsSystem" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingPolicy object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingPolicy.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingPolicy.ObjectId." If "tbl_MessageAgingPolicy.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.181. csp_MessageAgingRuleApply

Ages messages in all the UnityMbxDbN databases, where the mailbox is subscribed to the associated policy and the messages meets the rule criteria for aging.

Additional Information

The @ObjectId parameter must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The method will apply this rule to all mailboxes subscribed to the Aging Policy associated with the Rule.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@NumMsgsAged	Out	ignore	int (4 bytes)	Number of messages that were aged.
Optional	@NumMsgsFailed	Out	ignore	int (4 bytes)	Number of messages that should have been aged, but failed.
Optional	@RunTime	Out	ignore	int (4 bytes)	Returns the amount of time in milliseconds that it took to age the messages.

Exceptions

csp_MessageAgingRuleApply will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified MessageAgingRule object was not found. The names of the object (Message aging rule), table (tbl_MessageAgingRule), and column (ObjectId) are included with the exception message.
1029	EXCEPTION_AGING_RULE_DISABLED	The aging rule is disabled. The name of the rule that is disabled is returned with the exception.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@NumMsgsAged

Property Name	Value
Description:	Number of messages that were aged.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@NumMsgsFailed

Property Name	Value
Description:	Number of messages that should have been aged, but failed.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The method will apply this rule to all mailboxes subscribed to the Aging Policy associated with the Rule.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.ObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.ObjectId." If "tbl_MessageAgingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@RunTime

Property Name	Value
Description:	Returns the amount of time in milliseconds that it took to age the messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	False

6.182. csp_MessageAgingRuleCreate

Creates a new message aging rule by inserting a new row into tbl_MessageAgingRule.

Additional Information

The parameters @Days and @MessageAgingPolicyObjectId must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@Days	In	inherit	int (4 bytes)	Age message older than this number of days.
Required	@MessageAgingPolicyObjectId	In	inherit	char (36 characters)	The objectid of the MessageAgingPolicy to which this rule belongs.
Optional	@Action	In	inherit	int (4 bytes)	Describes the action to take when the rule is applied.
Optional	@AgingTimeType	In	inherit	int (4 bytes)	This defines what column to use (modificationtime or arrivaltime) when calculating messages to age.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Deleted	In	inherit	smallint (2 bytes)	Apply this rule to messages where UnityMbxDb.tbl_FolderItem.Deleted is equal to this value.
Optional	@Enabled	In	inherit	smallint (2 bytes)	If not true, then don't apply this rule as part of the message aging policy
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.
Optional	@Recent	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_FolderItem.Recent is equal to this value.
Optional	@Secure	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_Message.Secure is equal to this value.
Optional	@Seen	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_FolderItem.Seen is equal to this value.

Exceptions

csp_MessageAgingRuleCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@Days and @MessageAgingPolicyObjectId) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@Action

Property Name	Value
Description:	Describes the action to take when the rule is applied.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	AgingRuleAction
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Action." If "tbl_MessageAgingRule.Action" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AgingTimeType

Property Name	Value
Description:	This defines what column to use (modificationtime or arrivaltime) when calculating messages to age.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.AgingTimeType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)

Property Name	Value
Custom Type:	AgingTimeType
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.AgingTimeType." If "tbl_MessageAgingRule.AgingTimeType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Days

Property Name	Value
Description:	Age message older than this number of days.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Days
Required/Optional Parameter:	Required
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Days." If "tbl_MessageAgingRule.Days" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Deleted

Property Name	Value
Description:	Apply this rule to messages where UnityMbxDb.tbl_FolderItem.Deleted is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Deleted
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Deleted." If "tbl_MessageAgingRule.Deleted" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Enabled

Property Name	Value
Description:	If not true, then don't apply this rule as part of the message aging policy
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Enabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Enabled." If "tbl_MessageAgingRule.Enabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The objectid of the MessageAgingPolicy to which this rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.MessageAgingPolicyObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.MessageAgingPolicyObjectId." If "tbl_MessageAgingRule.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.ObjectId." If "tbl_MessageAgingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@Recent

Property Name	Value
Description:	Apply this rule to messages where tbl_FolderItem.Recent is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Recent
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Recent." If "tbl_MessageAgingRule.Recent" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Secure

Property Name	Value
Description:	Apply this rule to messages where tbl_Message.Secure is equal to this value.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Secure
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Secure." If "tbl_MessageAgingRule.Secure" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Seen

Property Name	Value
Description:	Apply this rule to messages where tbl_FolderItem.Seen is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Seen
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Seen." If "tbl_MessageAgingRule.Seen" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.183. csp_MessageAgingRuleDelete

Deletes a MessageAgingRule object from tbl_MessageAgingRule as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_MessageAgingRuleDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The MessageAgingRule object was not found. The names of the object (Message aging rule), table (tbl_MessageAgingRule), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MessageAgingRule), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.ObjectId." If "tbl_MessageAgingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.184. csp_MessageAgingRuleModify

Updates the attributes of a MessageAgingRule object based on the values passed in via the parameters. The @ObjectId parameter identifies the MessageAgingRule object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.
Optional	@Action	In	inherit	int (4 bytes)	Describes the action to take when the rule is applied.
Optional	@AgingTimeType	In	inherit	int (4 bytes)	This defines what column to use (modificationtime or arrivaltime) when calculating messages to age.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@Days	In	inherit	int (4 bytes)	Age message older than this number of days.
Optional	@Deleted	In	inherit	smallint (2 bytes)	Apply this rule to messages where UnityMbxDb.tbl_FolderItem.Deleted is equal to this value.
Optional	@Enabled	In	inherit	smallint (2 bytes)	If not true, then don't apply this rule as part of the message aging policy
Optional	@MessageAgingPolicy ObjectId	In	inherit	char (36 characters)	The objectid of the MessageAgingPolicy to which this rule belongs.
Optional	@Recent	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_FolderItem.Recent is equal to this value.
Optional	@Secure	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_Message.Secure is equal to this value.
Optional	@Seen	In	inherit	smallint (2 bytes)	Apply this rule to messages where tbl_FolderItem.Seen is equal to this value.

Exceptions

csp_MessageAgingRuleModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause the Object Not Found exception to be thrown: 1. The MessageAgingRule object was not found. The names of the object (Message aging rule), table (tbl_MessageAgingRule), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_MessageAgingRule), and the column (---) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@Action

Property Name	Value
Description:	Describes the action to take when the rule is applied.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Action
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	AgingRuleAction
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Action." If "tbl_MessageAgingRule.Action" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AgingTimeType

Property Name	Value
Description:	This defines what column to use (modificationtime or arrivaltime) when calculating messages to age.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.AgingTimeType
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	AgingTimeType
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.AgingTimeType." If "tbl_MessageAgingRule.AgingTimeType" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	

Property Name	Value
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@Days

Property Name	Value
Description:	Age message older than this number of days.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Days
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Days." If "tbl_MessageAgingRule.Days" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Deleted

Property Name	Value
Description:	Apply this rule to messages where UnityMbxDb.tbl_FolderItem.Deleted is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Deleted
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Deleted." If "tbl_MessageAgingRule.Deleted" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Enabled

Property Name	Value
Description:	If not true, then don't apply this rule as part of the message aging policy
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Enabled
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Enabled." If "tbl_MessageAgingRule.Enabled" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MessageAgingPolicyObjectId

Property Name	Value
Description:	The objectid of the MessageAgingPolicy to which this rule belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.MessageAgingPolicyObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.MessageAgingPolicyObjectId." If "tbl_MessageAgingRule.MessageAgingPolicyObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a MessageAgingRule object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.ObjectId." If "tbl_MessageAgingRule.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Recent

Property Name	Value
Description:	Apply this rule to messages where tbl_FolderItem.Recent is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Recent
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Recent." If "tbl_MessageAgingRule.Recent" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Secure

Property Name	Value
Description:	Apply this rule to messages where tbl_Message.Secure is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Secure
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Secure." If "tbl_MessageAgingRule.Secure" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@Seen

Property Name	Value
Description:	Apply this rule to messages where tbl_FolderItem.Seen is equal to this value.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_MessageAgingRule.Seen
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_MessageAgingRule.Seen." If "tbl_MessageAgingRule.Seen" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.185. csp_NicknameCreate

Creates a new Nickname object by inserting a new row into tbl_Nickname.

Additional Information

The parameters @CanonicalName and @Nickname must be provided.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@CanonicalName	In	inherit	nvarchar (64 characters)	The proper name for a contact or user for which a Nickname is associated.
Required	@Nickname	In	inherit	nvarchar (64 characters)	A nick name associated with the name.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.

Exceptions

csp_NicknameCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@CanonicalName and @Nickname) is NULL. The name of the missing parameter is included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.

Property Name	Value
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@CanonicalName

Property Name	Value
Description:	The proper name for a contact or user for which a Nickname is associated.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Nickname.CanonicalName

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.CanonicalName." If "tbl_Nickname.CanonicalName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Nickname

Property Name	Value
Description:	A nick name associated with the name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Nickname.Nickname
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.Nickname." If "tbl_Nickname.Nickname" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Nickname.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.ObjectId." If "tbl_Nickname.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

6.186. csp_NicknameDelete

Deletes a Nickname object from tbl_Nickname as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	Component name for the auditing.

Exceptions

csp_NicknameDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified Nickname object was not found. The names of the object (Nick Name), table (tbl_Nickname), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_Nickname), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_Nickname.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.ObjectId." If "tbl_Nickname.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.187. csp_NicknameModify

Updates the attributes of a Nickname object based on the values passed in via the parameters. The @ObjectId parameter identifies the Nickname object that is updated.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.
Optional	@AuditAlias	In	ignore	nvarchar (64 characters)	Unity alias for the auditing.
Optional	@AuditComponent	In	ignore	varchar (64 characters)	Component name for the auditing.
Optional	@CanonicalName	In	inherit	nvarchar (64 characters)	The proper name for a contact or user for which a Nickname is associated.
Optional	@Nickname	In	inherit	nvarchar (64 characters)	A nick name associated with the name.

Exceptions

csp_NicknameModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Nickname object was not found. The names of the object (Nick Name), table (tbl_Nickname), and column (ObjectId) are included with the exception message.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	Unity alias for the auditing.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	Component name for the auditing.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Ignore - a value of NULL in the parameter is ignored.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@CanonicalName

Property Name	Value
Description:	The proper name for a contact or user for which a Nickname is associated.
Notes:	
Business Rules:	
Developer Notes:	

Property Name	Value
Reference Table/Column:	tbl_Nickname.CanonicalName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.CanonicalName." If "tbl_Nickname.CanonicalName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@Nickname

Property Name	Value
Description:	A nick name associated with the name.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Nickname.Nickname
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.Nickname." If "tbl_Nickname.Nickname" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a Nickname object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_Nickname.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)

Property Name	Value
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_Nickname.ObjectId." If "tbl_Nickname.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.188. csp_NotificationDeviceConversationCreate

Creates a new NotificationDeviceConversation object by inserting a new row into tbl_NotificationDeviceConversation. It also creates all the sub objects for a NotificationDevice such as a NotificationRule, NotificationRuleCriteria and NotificationRuleEvent. In addition it also creates a new NotificationDevice object (base object for a NotificationDeviceConversation object) by inserting a new row into tbl_NotificationDevice. A NotificationDeviceConversation object contains the parameters and settings (phonenumbers, ringstowait, etc.) for a dialable phone notification device.

Additional Information

The parameters @DisplayName, @MediaSwitchObjectId, and @SubscriberObjectId must be provided.

Business Rules

If @Active = True, @PhoneNumber must be non-null.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Required	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for notification.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification device belongs.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AfterDialDigits	In	inherit	nvarchar (32 characters)	The extra digits (if any) that Cisco Unity Connection will dial after the phone number.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BusyRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@Conversation	In	inherit	nvarchar (64 characters)	The name of the Conversation Cisco Unity Connection will use when calling the subscriber to notify of new messages. This maps to one of the conversations in tbl_Conversation.
Optional	@DetectTransferLoop	In	inherit	smallint (2 bytes)	A flag indicating whether Unity can do a loop detect transfer to this device.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@DialDelay	In	inherit	int (4 bytes)	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceConversation object.
Optional	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number to dial, including the trunk access code (if any), of the device.
Optional	@PromptForId	In	inherit	smallint (2 bytes)	A flag indicating whether to prompt a subscriber for their Cisco Unity Connection ID, or just their password.
Optional	@RetriesOnBusy	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Optional	@RetriesOnRna	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Optional	@RingsToWait	In	inherit	int (4 bytes)	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Optional	@RnaRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Optional	@WaitConnect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.

Exceptions

csp_NotificationDeviceConversationCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DeviceName, @DisplayName, @MediaSwitchObjectId, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Subscriber object was not found. The names of the object (Subscriber), table (tbl_UserSubscriber), and column (ObjectId) are included with the exception message.
1047	EXCEPTION_CONFIGURATION_SETTING_NULL_REQUIRED	The specified configuration setting was not found. The name of the setting is included in the exception message.
1050	EXCEPTION_NOTIFICATION_PHONENUMBER_REQUIRED	The parameter @PhoneNumber must be provided for an "active" conversation type of notification device.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AfterDialDigits

Property Name	Value
Description:	The extra digits (if any) that Cisco Unity Connection will dial after the phone number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.AfterDialDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	NotificationDeviceAfterDialDigits
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.AfterDialDigits." If "tbl_NotificationDeviceConversation.AfterDialDigits" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)

Property Name	Value
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BusyRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.BusyRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.BusyRetryInterval." If "tbl_NotificationDeviceConversation.BusyRetryInterval" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Conversation

Property Name	Value
Description:	The name of the Conversation Cisco Unity Connection will use when calling the subscriber to notify of new messages. This maps to one of the conversations in tbl_Conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.Conversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.Conversation." If "tbl_NotificationDeviceConversation.Conversation" can be NULL, then explicit NULL is allowed.
Default Value:	SubNotify
Direction:	In
Update Column Value From Parameter:	True

@DetectTransferLoop

Property Name	Value
Description:	A flag indicating whether Unity can do a loop detect transfer to this device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.DetectTransferLoop
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.DetectTransferLoop." If "tbl_NotificationDeviceConversation.DetectTransferLoop" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DialDelay

Property Name	Value
Description:	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.DialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.DialDelay." If "tbl_NotificationDeviceConversation.DialDelay" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for notification.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.MediaSwitchObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.MediaSwitchObjectId." If "tbl_NotificationDeviceConversation.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceConversation object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.ObjectId." If "tbl_NotificationDeviceConversation.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number to dial, including the trunk access code (if any), of the device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.PhoneNumber." If "tbl_NotificationDeviceConversation.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptForId

Property Name	Value
Description:	A flag indicating whether to prompt a subscriber for their Cisco Unity Connection ID, or just their password.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.PromptForId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.PromptForId." If "tbl_NotificationDeviceConversation.PromptForId" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnBusy

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RetriesOnBusy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RetriesOnBusy." If "tbl_NotificationDeviceConversation.RetriesOnBusy" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnRna

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RetriesOnRna
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RetriesOnRna." If "tbl_NotificationDeviceConversation.RetriesOnRna" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RingsToWait

Property Name	Value
Description:	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RingsToWait
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RingsToWait." If "tbl_NotificationDeviceConversation.RingsToWait" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RnaRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RnaRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RnaRetryInterval." If "tbl_NotificationDeviceConversation.RnaRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification device belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.SubscriberObjectId." If "tbl_NotificationDevice.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode." If "tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WaitConnect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.WaitConnect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.WaitConnect." If "tbl_NotificationDeviceConversation.WaitConnect" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.189. csp_NotificationDeviceConversationDelete

Deletes a NotificationDeviceConversation object from tbl_NotificationDeviceConversation and the associated NotificationDevice object from tbl_NotificationDevice as specified by the @ObjectId parameter.

Additional Information

This procedure uses the FK cascade delete constraint to delete the row in tbl_NotificationDeviceConversation.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationDeviceConversationDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationDevice object was not found. The names of the object (Notification device), table (tbl_NotificationDevice), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationDevice), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.ObjectId." If "tbl_NotificationDevice.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.190. csp_NotificationDeviceConversationModify

Updates the attributes of a NotificationDeviceConversation object and its associated NotificationDevice object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationDeviceConversation and NotificationDevice objects that are updated.

Additional Information

Business Rules

If device is active, must pass in a Phone Number or the table already contains a Phone number.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceConversation object.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AfterDialDigits	In	inherit	nvarchar (32 characters)	The extra digits (if any) that Cisco Unity Connection will dial after the phone number.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BusyRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Optional	@Conversation	In	inherit	nvarchar (64 characters)	The name of the Conversation Cisco Unity Connection will use when calling the subscriber to notify of new messages. This maps to one of the conversations in tbl_Conversation.
Optional	@DetectTransferLoop	In	inherit	smallint (2 bytes)	A flag indicating whether Unity can do a loop detect transfer to this device.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DialDelay	In	inherit	int (4 bytes)	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," "Pager 2," "Work Phone, " etc.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for notification.
Optional	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number to dial, including the trunk access code (if any), of the device.
Optional	@PromptForId	In	inherit	smallint (2 bytes)	A flag indicating whether to prompt a subscriber for their Cisco Unity Connection ID, or just their password.
Optional	@RetriesOnBusy	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Optional	@RetriesOnRna	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Optional	@RingsToWait	In	inherit	int (4 bytes)	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Optional	@RnaRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicating whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@WaitConnect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.

Exceptions

csp_NotificationDeviceConversationModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationDeviceConversation object was not found. The names of the object (Notification device conversation), table (tbl_NotificationDeviceConversation), and column (ObjectId) are included with the exception message.
1050	EXCEPTION_NOTIFICATION_PHONENUMBER_REQUIRED	The parameter @PhoneNumber must be provided or the column tbl_NotificationDeviceConversation must already contain a valid value for an "active" conversation type of notification device.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In

Property Name	Value
Update Column Value From Parameter:	True

@AfterDialDigits

Property Name	Value
Description:	The extra digits (if any) that Cisco Unity Connection will dial after the phone number.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.AfterDialDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	NotificationDeviceAfterDialDigits
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.AfterDialDigits." If "tbl_NotificationDeviceConversation.AfterDialDigits" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BusyRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.BusyRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.BusyRetryInterval." If "tbl_NotificationDeviceConversation.BusyRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@Conversation

Property Name	Value
Description:	The name of the Conversation Cisco Unity Connection will use when calling the subscriber to notify of new messages. This maps to one of the conversations in tbl_Conversation.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.Conversation
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	ConversationName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.Conversation." If "tbl_NotificationDeviceConversation.Conversation" can be NULL, then explicit NULL is allowed.
Default Value:	SubNotify
Direction:	In
Update Column Value From Parameter:	True

@DetectTransferLoop

Property Name	Value
Description:	A flag indicating whether Unity can do a loop detect transfer to this device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.DetectTransferLoop
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.DetectTransferLoop." If "tbl_NotificationDeviceConversation.DetectTransferLoop" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DialDelay

Property Name	Value
Description:	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.DialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.DialDelay." If "tbl_NotificationDeviceConversation.DialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for notification.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.MediaSwitchObjectId." If "tbl_NotificationDeviceConversation.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceConversation object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectId
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.ObjectId." If "tbl_NotificationDeviceConversation.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number to dial, including the trunk access code (if any), of the device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.PhoneNumber." If "tbl_NotificationDeviceConversation.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@PromptForId

Property Name	Value
Description:	A flag indicating whether to prompt a subscriber for their Cisco Unity Connection ID, or just their password.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.PromptForId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.PromptForId." If "tbl_NotificationDeviceConversation.PromptForId" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnBusy

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RetriesOnBusy
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RetriesOnBusy." If "tbl_NotificationDeviceConversation.RetriesOnBusy" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnRna

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RetriesOnRna
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RetriesOnRna." If "tbl_NotificationDeviceConversation.RetriesOnRna" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RingsToWait

Property Name	Value
Description:	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RingsToWait
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RingsToWait." If "tbl_NotificationDeviceConversation.RingsToWait" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RnaRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.RnaRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.RnaRetryInterval." If "tbl_NotificationDeviceConversation.RnaRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicating whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode." If "tbl_NotificationDeviceConversation.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WaitConnect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceConversation.WaitConnect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceConversation.WaitConnect." If "tbl_NotificationDeviceConversation.WaitConnect" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.191. csp_NotificationDevicePagerCreate

Creates a new NotificationDevicePager object by inserting a new row into tbl_NotificationDevicePager. It also creates all the sub objects for a NotificationDevice such as a NotificationRule, NotificationRuleCriteria and NotificationRuleEvent. In addition, it also creates a new NotificationDevice object (base object for a NotificationDevicePager object) by inserting a new row in tbl_NotificationDevice. A NotificationDevicePager object contains the parameters and settings (sendcount, dialdelay, etc.) for a pager (via phone, not SMTP) notification device.

Additional Information

The parameters @DisplayName, @MediaSwitchObjectId, and @SubscriberObjectId must be provided.

Business Rules

If @Active = True, @PhoneNumber must be non-null.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone, " etc.
Required	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for notification.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification device belongs.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AfterDialDigits	In	inherit	nvarchar (32 characters)	The extra digits (if any) that Cisco Unity Connection will dial after the phone number. For numeric pagers, the extra digits are shown on the pager display.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BusyRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@DialDelay	In	inherit	int (4 bytes)	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevicePager object.
Optional	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number to dial, including the trunk access code, to send a page.
Optional	@RetriesOnBusy	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Optional	@RetriesOnRna	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Optional	@RingsToWait	In	inherit	int (4 bytes)	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Optional	@RnaRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicting whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicting whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Optional	@WaitConnect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.

Exceptions

csp_NotificationDevicePagerCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DeviceName, @DisplayName, @MediaSwitchObjectId, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified Subscriber object was not found. The names of the object (Subscriber), table (tbl_UserSubscriber), and column (ObjectId) are included with the exception message.
1050	EXCEPTION_NOTIFICATION_PHONENUMBER_REQUIRED	The parameter @PhoneNumber must be provided for an "active" pager type of notification device.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AfterDialDigits

Property Name	Value
Description:	The extra digits (if any) that Cisco Unity Connection will dial after the phone number. For numeric pagers, the extra digits are shown on the pager display.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.AfterDialDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	NotificationDeviceAfterDialDigits
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.AfterDialDigits." If "tbl_NotificationDevicePager.AfterDialDigits" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@BusyRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.BusyRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.BusyRetryInterval." If "tbl_NotificationDevicePager.BusyRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DialDelay

Property Name	Value
Description:	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.DialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.DialDelay." If "tbl_NotificationDevicePager.DialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for notification.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.MediaSwitchObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.MediaSwitchObjectId." If "tbl_NotificationDevicePager.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevicePager object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.ObjectId." If "tbl_NotificationDevicePager.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number to dial, including the trunk access code, to send a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.PhoneNumber." If "tbl_NotificationDevicePager.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnBusy

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RetriesOnBusy

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RetriesOnBusy." If "tbl_NotificationDevicePager.RetriesOnBusy" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnRna

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RetriesOnRna
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RetriesOnRna." If "tbl_NotificationDevicePager.RetriesOnRna" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RingsToWait

Property Name	Value
Description:	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RingsToWait

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RingsToWait." If "tbl_NotificationDevicePager.RingsToWait" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RnaRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RnaRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RnaRetryInterval." If "tbl_NotificationDevicePager.RnaRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@SendCallerId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.SendCallerId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.SendCallerId." If "tbl_NotificationDevicePager.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.SendCount." If "tbl_NotificationDevicePager.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification device belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.SubscriberObjectId

Property Name	Value
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.SubscriberObjectId." If "tbl_NotificationDevice.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicting whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.TransmitForcedAuthorizationCode
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.TransmitForcedAuthorizationCode." If "tbl_NotificationDevicePager.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WaitConnect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.WaitConnect

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.WaitConnect." If "tbl_NotificationDevicePager.WaitConnect" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.192. csp_NotificationDevicePagerDelete

Deletes a NotificationDevicePager object from tbl_NotificationDevicePager and the associated NotificationDevice object from tbl_NotificationDevice as specified by the @ObjectId parameter.

Additional Information

This procedure uses the FK cascade delete constraint to delete the row in tbl_NotificationDevicePager.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationDevicePagerDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationDevice object was not found. The names of the object (Notification device), table (tbl_NotificationDevice), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationDevice), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.ObjectId." If "tbl_NotificationDevice.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.193. csp_NotificationDevicePagerModify

Updates the attributes of a NotificationDevicePager object and its associated NotificationDevice object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationDevicePager and NotificationDevice objects that are updated.

Additional Information

Business Rules

If device is active, must pass in a Phone Number or the table already contains a Phone number.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevicePager object.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AfterDialDigits	In	inherit	nvarchar (32 characters)	The extra digits (if any) that Cisco Unity Connection will dial after the phone number. For numeric pagers, the extra digits are shown on the pager display.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@BusyRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@DialDelay	In	inherit	int (4 bytes)	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for notification.
Optional	@PhoneNumber	In	inherit	nvarchar (40 characters)	The phone number to dial, including the trunk access code, to send a page.
Optional	@RetriesOnBusy	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Optional	@RetriesOnRna	In	inherit	int (4 bytes)	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Optional	@RingsToWait	In	inherit	int (4 bytes)	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Optional	@RnaRetryInterval	In	inherit	int (4 bytes)	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicting whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@TransmitForcedAuthorizationCode	In	inherit	smallint (2 bytes)	A flag indicting whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Optional	@WaitConnect	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.

Exceptions

csp_NotificationDevicePagerModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationDevicePager object was not found. The names of the object (Notification device pager), table (tbl_NotificationDevicePager), and column (ObjectId) are included with the exception message.
1050	EXCEPTION_NOTIFICATION_PHONENUMBER_REQUIRED	The parameter @PhoneNumber must be provided or the column tbl_NotificationDevicePager must already contain a valid value for an "active" pager type of notification device.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AfterDialDigits

Property Name	Value
Description:	The extra digits (if any) that Cisco Unity Connection will dial after the phone number. For numeric pagers, the extra digits are shown on the pager display.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.AfterDialDigits
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (32 characters)
Custom Type:	NotificationDeviceAfterDialDigits
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.AfterDialDigits." If "tbl_NotificationDevicePager.AfterDialDigits" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@BusyRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.BusyRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.BusyRetryInterval." If "tbl_NotificationDevicePager.BusyRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	5
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DialDelay

Property Name	Value
Description:	The amount of time (in seconds) Cisco Unity Connection will wait after detecting a successful call before dialing specified additional digits (if any). Additional digits are contained in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.DialDelay
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.DialDelay." If "tbl_NotificationDevicePager.DialDelay" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for notification.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.MediaSwitchObjectId." If "tbl_NotificationDevicePager.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevicePager object.
Notes:	
Business Rules:	

Property Name	Value
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.ObjectId." If "tbl_NotificationDevicePager.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number to dial, including the trunk access code, to send a page.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.PhoneNumber." If "tbl_NotificationDevicePager.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnBusy

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if it is busy.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RetriesOnBusy

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RetriesOnBusy." If "tbl_NotificationDevicePager.RetriesOnBusy" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RetriesOnRna

Property Name	Value
Description:	The number of times Cisco Unity Connection will retry the notification device if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RetriesOnRna
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RetriesOnRna." If "tbl_NotificationDevicePager.RetriesOnRna" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RingsToWait

Property Name	Value
Description:	The number of rings Cisco Unity Connection will wait before hanging up if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RingsToWait

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RingsToWait." If "tbl_NotificationDevicePager.RingsToWait" can be NULL, then explicit NULL is allowed.
Default Value:	4
Direction:	In
Update Column Value From Parameter:	True

@RnaRetryInterval

Property Name	Value
Description:	The amount of time (in minutes) Cisco Unity Connection will wait between tries if the device does not answer.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.RnaRetryInterval
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.RnaRetryInterval." If "tbl_NotificationDevicePager.RnaRetryInterval" can be NULL, then explicit NULL is allowed.
Default Value:	15
Direction:	In
Update Column Value From Parameter:	True

@SendCallerId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.SendCallerId

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.SendCallerId." If "tbl_NotificationDevicePager.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicting whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.SendCount." If "tbl_NotificationDevicePager.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@TransmitForcedAuthorizationCode

Property Name	Value
Description:	A flag indicting whether an authorization code should be transmitted to Cisco Call Manager after this number is dialed during an outbound call.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.TransmitForcedAuthorizationCode

Property Name	Value
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.TransmitForcedAuthorizationCode." If "tbl_NotificationDevicePager.TransmitForcedAuthorizationCode" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@WaitConnect

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection waits until it detects a connection before dialing the digits in AfterDialDigits.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevicePager.WaitConnect
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevicePager.WaitConnect." If "tbl_NotificationDevicePager.WaitConnect" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

6.194. csp_NotificationDeviceSMSCreate

Creates a new NotificationDeviceSMS object by inserting a new row into tbl_NotificationDeviceSMS. It also creates all the sub objects for a NotificationDevice such as a NotificationRule, NotificationRuleCriteria and NotificationRuleEvent. In addition, it also creates a new NotificationDevice object (base object for a NotificationDeviceSMS object) by inserting a new row into tbl_NotificationDevice. A NotificationDeviceSMS object contains the parameters and settings (sendcount, SMPPProviderObjectid, etc.) for a SMS notification device.

Additional Information

The parameters @DisplayName and @SubscriberObjectId must be provided.

This procedure makes a check to determine whether the specified SMPP Provider is active and that it can be used by the user.

Business Rules

* If @Active = True, @RecipientAddress must be non-null.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone," etc.
Required	@SmppProviderObjectid	In	inherit	char (36 characters)	The unique identifier of the SMPPProvider object that is used by this notification device.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification device belongs.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMS object.
Optional	@RecipientAddress	In	inherit	lvarchar (320 characters)	The phone number of the SMS-compatible device to receive the message. In CUSA, this is referred to as the "To:" field.
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Optional	@SenderAddress	In	inherit	nvarchar (40 characters)	The return phone number for the message notification. Typically, this column contains the number that the subscriber calls to check messages (i.e., pilot number for Cisco Unity Connection voice mail). If the SMPP Provider requires a source address for the server sending the message, the SMSC will overwrite this data with an IP address. In CUSA, this is referred to as the "From:" field.
Optional	@StaticText	In	inherit	lvarchar (256 characters)	The text message that the subscriber wants to receive in a Text Pager notification. For Text Pager notifications only. The SA refers to this as the "Send:" field. Typically holds email address. Also holds text for text pagers. SA text pager calls this 'send text'. It is empty for numeric pagers.

Exceptions

csp_NotificationDeviceSMSCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DeviceName, @DisplayName, @SMPPPProvider, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	Returned if the SMPP Provider was not found.
1031	EXCEPTION_NOTIFICATION_TOADDRESS_REQUIRED	The value of @SmtpAddress must be non-null. The name of the parameter (@Smtpaddress), table (tbl_NotificationDeviceSMS) and column (SmtpAddress) are included with the exception message.
1307	EXCEPTION_RESOURCE_DISABLED	The SMPP provider is not enabled.
1308	EXCEPTION_RESOURCE_OWNER_INVALID	The user does not own the SMPP provider.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)

Property Name	Value
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.ObjectId." If "tbl_NotificationDeviceSMS.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@RecipientAddress

Property Name	Value
Description:	The phone number of the SMS-compatible device to receive the message. In CUSA, this is referred to as the "To:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SmtAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SmtAddress." If "tbl_NotificationDeviceSMS.SmtAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SenderId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SendCallerId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SendCallerId." If "tbl_NotificationDeviceSMS.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SendCount." If "tbl_NotificationDeviceSMS.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SenderAddress

Property Name	Value
Description:	The return phone number for the message notification. Typically, this column contains the number that the subscriber calls to check messages (i.e., pilot number for Cisco Unity Connection voice mail). If the SMPP Provider requires a source address for the server sending the message, the SMSC will overwrite this data with an IP address. In CUSA, this is referred to as the "From:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.PhoneNumber." If "tbl_NotificationDeviceSMS.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SmppProviderObjectId

Property Name	Value
Description:	The unique identifier of the SMPPProvider object that is used by this notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SmppProviderObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SmppProviderObjectId." If "tbl_NotificationDeviceSMS.SmppProviderObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StaticText

Property Name	Value
Description:	The text message that the subscriber wants to receive in a Text Pager notification. For Text Pager notifications only. The SA refers to this as the "Send:" field. Typically holds email address. Also holds text for text pagers. SA text pager calls this 'send text'. It is empty for numeric pagers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.StaticText
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.StaticText." If "tbl_NotificationDeviceSMS.StaticText" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification device belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.SubscriberObjectId." If "tbl_NotificationDevice.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.195. csp_NotificationDeviceSMSDelete

Deletes a NotificationDeviceSMS object from tbl_NotificationDeviceSMS and the associated NotificationDevice object from tbl_NotificationDevice as specified by the @ObjectId parameter.

Additional Information

This procedure uses the FK cascade delete constraint to delete the row in tbl_NotificationDeviceSMS.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationDeviceSMSDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationDevice object was not found. The names of the object (Notification device), table (tbl_NotificationDevice), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationDevice), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.ObjectId." If "tbl_NotificationDevice.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.196. csp_NotificationDeviceSMSModify

Updates the attributes of a NotificationDeviceSMS object and its associated NotificationDevice object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationDeviceSMS and NotificationDevice objects that are updated.

Additional Information

This procedure makes a check to determine whether the specified SMPP Provider is active and that it can be used by the user.

Business Rules

If device is active, must pass in a RecipientAddress or the table already contains an SMTP address.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMS object.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone," etc.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@RecipientAddress	In	inherit	lvarchar (320 characters)	The phone number of the SMS-compatible device to receive the message. In CUSA, this is referred to as the "To:" field.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Optional	@SenderAddress	In	inherit	nvarchar (40 characters)	The return phone number for the message notification. Typically, this column contains the number that the subscriber calls to check messages (i.e., pilot number for Cisco Unity Connection voice mail). If the SMPP Provider requires a source address for the server sending the message, the SMSC will overwrite this data with an IP address. In CUSA, this is referred to as the "From:" field.
Optional	@SmppProviderObjectId	In	inherit	char (36 characters)	The unique identifier of the SMPPProvider object that is used by this notification device.
Optional	@StaticText	In	inherit	lvarchar (256 characters)	The text message that the subscriber wants to receive in a Text Pager notification. For Text Pager notifications only. The SA refers to this as the "Send:" field. Typically holds email address. Also holds text for text pagers. SA text pager calls this 'send text'. It is empty for numeric pagers.

Exceptions

csp_NotificationDeviceSMSModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.

Error #	Name	Description
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationDeviceSMS object was not found. The names of the object (Notification device sms), table (tbl_NotificationDeviceSMS), and column (ObjectId) are included with the exception message. Also returned if the Returned if the SMPP Provider was not found.
1031	EXCEPTION_NOTIFICATION_TOADDRESS_REQUIRED	The value of @SmtpAddress must be non-null. The name of the parameter (@Smtpaddress), table (tbl_NotificationDeviceSMS) and column (SmtpAddress) are included with the exception message.
1307	EXCEPTION_RESOURCE_DISABLED	The SMPP provider is not enabled.
1308	EXCEPTION_RESOURCE_OWNER_INVALID	The user does not own the SMPP provider.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	

Property Name	Value
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)

Property Name	Value
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone," etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMS object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.ObjectId." If "tbl_NotificationDeviceSMS.ObjectId" can be NULL, then explicit NULL is allowed.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@RecipientAddress

Property Name	Value
Description:	The phone number of the SMS-compatible device to receive the message. In CUSA, this is referred to as the "To:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SmtAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SmtAddress." If "tbl_NotificationDeviceSMS.SmtAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SenderId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SendCallerId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SendCallerId." If "tbl_NotificationDeviceSMS.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SendCount." If "tbl_NotificationDeviceSMS.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SenderAddress

Property Name	Value
Description:	The return phone number for the message notification. Typically, this column contains the number that the subscriber calls to check messages (i.e., pilot number for Cisco Unity Connection voice mail). If the SMPP Provider requires a source address for the server sending the message, the SMSC will overwrite this data with an IP address. In CUSA, this is referred to as the "From:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.PhoneNumber." If "tbl_NotificationDeviceSMS.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SmppProviderObjectId

Property Name	Value
Description:	The unique identifier of the SMPPProvider object that is used by this notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.SmppProviderObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.SmppProviderObjectId." If "tbl_NotificationDeviceSMS.SmppProviderObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@StaticText

Property Name	Value
Description:	The text message that the subscriber wants to receive in a Text Pager notification. For Text Pager notifications only. The SA refers to this as the "Send:" field. Typically holds email address. Also holds text for text pagers. SA text pager calls this 'send text'. It is empty for numeric pagers.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMS.StaticText
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (256 characters)

Property Name	Value
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMS.StaticText." If "tbl_NotificationDeviceSMS.StaticText" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.197. csp_NotificationDeviceSMTPCreate

Creates a new NotificationDeviceSMTP object by inserting a new row into tbl_NotificationDeviceSMTP. It also creates all the sub objects for a NotificationDevice such as a NotificationRule, NotificationRuleCriteria and NotificationRuleEvent. In addition, it also creates a new NotificationDevice object (base object for a NotificationDeviceSMTP object) by inserting a new row into tbl_NotificationDevice. A NotificationDeviceSMTP object contains the parameters and settings (sendcount, smtpaddress, etc.) for a SMTP notification device.

Additional Information

The parameters @DisplayName, and @SubscriberObjectId must be provided.

Business Rules

If @Active = True, @SmtpAddress must be non-null.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this notification device belongs.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMTP object.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@PhoneNumber	In	inherit	varchar (40 characters)	The phone number or alphanumeric text (as applicable) for sending a notification message to a text-compatible cell phone or pager. In the SA, this is referred to as the "From:" field. Typically, this field contains the number that the subscriber calls to check messages.
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Optional	@SendPcaLink	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a link to the PCA with the notification message.
Optional	@SmtpAddress	In	inherit	lvarchar (320 characters)	The e-mail address of the text pager, text-compatible cell phone, or another e-mail account (such as a home e-mail address) to which the notification message is to be sent. In the SA, this is referred to as the "To:" field.
Optional	@StaticText	In	inherit	lvarchar (256 characters)	The actual text message that the subscriber wants to receive in a Text Pager notification. The SA refers to this as the "Send:" field.

Exceptions

csp_NotificationDeviceSMTPCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of one of the required parameters (@DeviceName, @DisplayName, and @SubscriberObjectId) is NULL. The name of the missing parameter is included with the exception message.
1031	EXCEPTION_NOTIFICATION_TOADDRESS_REQUIRED	The value of @SmtpAddress must be non-null. The name of the parameter (@Smtpaddress), table (tbl_NotificationDeviceSmtp) and column (SmtpAddress) are included with the exception message.

Error #	Name	Description
1044	EXCEPTION_ADDRESS_IN_LOCAL_DOMAIN	A notification message cannot be addressed to the Cisco Unity Connection local domain. The specified SMTP address is included in the exception message.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMTP object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.ObjectId." If "tbl_NotificationDeviceSMTP.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number or alphanumeric text (as applicable) for sending a notification message to a text-compatible cell phone or pager. In the SA, this is referred to as the "From:" field. Typically, this field contains the number that the subscriber calls to check messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.PhoneNumber." If "tbl_NotificationDeviceSMTP.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SendCallerId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendCallerId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendCallerId." If "tbl_NotificationDeviceSMTP.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendCount." If "tbl_NotificationDeviceSMTP.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendPcaLink

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a link to the PCA with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendPcaLink
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendPcaLink." If "tbl_NotificationDeviceSMTP.SendPcaLink" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SmtAddress

Property Name	Value
Description:	The e-mail address of the text pager, text-compatible cell phone, or another e-mail account (such as a home e-mail address) to which the notification message is to be sent. In the SA, this is referred to as the "To:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SmtAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SmtAddress." If "tbl_NotificationDeviceSMTP.SmtAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StaticText

Property Name	Value
Description:	The actual text message that the subscriber wants to receive in a Text Pager notification. The SA refers to this as the "Send:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.StaticText
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.StaticText." If "tbl_NotificationDeviceSMTP.StaticText" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this notification device belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.SubscriberObjectId." If "tbl_NotificationDevice.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.198. csp_NotificationDeviceSMTPDelete

Deletes a NotificationDeviceSMTP object from tbl_NotificationDeviceSMTP and the associated NotificationDevice object from tbl_NotificationDevice as specified by the @ObjectId parameter.

Additional Information

This procedure uses the FK cascade delete constraint to delete the row in tbl_NotificationDeviceSMTP.

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationDeviceSMTPDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationDevice object was not found. The names of the object (Notification device), table (tbl_NotificationDevice), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationDevice), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDevice object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.ObjectId." If "tbl_NotificationDevice.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.199. csp_NotificationDeviceSMTPModify

Updates the attributes of a NotificationDeviceSMTP object and its associated NotificationDevice object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationDeviceSMTP and NotificationDevice objects that are updated.

Additional Information

Business Rules

If device is active, must pass in an SMTP address or the table already contains an SMTP address.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMTP object.
Optional	@Active	In	inherit	smallint (2 bytes)	A flag indicating whether the device is active or inactive (enabled/disabled).
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DeviceName	In	inherit	nvarchar (12 characters)	The "DeviceName" of the notification device.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2, "Work Phone, " etc.
Optional	@MaxBody	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'body' of a notification message.
Optional	@MaxSubject	In	inherit	int (4 bytes)	The maximum number of characters allowed in the 'subject' of a notification message.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@PhoneNumber	In	inherit	varchar (40 characters)	The phone number or alphanumeric text (as applicable) for sending a notification message to a text-compatible cell phone or pager. In the SA, this is referred to as the "From:" field. Typically, this field contains the number that the subscriber calls to check messages.
Optional	@SendCallerId	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Optional	@SendCount	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Optional	@SendPcaLink	In	inherit	smallint (2 bytes)	A flag indicating whether Cisco Unity Connection will include a link to the PCA with the notification message.
Optional	@SmtpAddress	In	inherit	lvarchar (320 characters)	The e-mail address of the text pager, text-compatible cell phone, or another e-mail account (such as a home e-mail address) to which the notification message is to be sent. In the SA, this is referred to as the "To:" field.
Optional	@StaticText	In	inherit	lvarchar (256 characters)	The actual text message that the subscriber wants to receive in a Text Pager notification. The SA refers to this as the "Send:" field.

Exceptions

csp_NotificationDeviceSMTPModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationDeviceSMTP object was not found. The names of the object (Notification device smtp), table (tbl_NotificationDeviceSMTP), and column (ObjectId) are included with the exception message.

Error #	Name	Description
1031	EXCEPTION_NOTIFICATION_TOADDRESS_REQUIRED	The value of @SmtpAddress must be non-null. The name of the parameter (@Smtpaddress), table (tbl_NotificationDeviceSMTP) and column (SmtpAddress) are included with the exception message.
1044	EXCEPTION_ADDRESS_IN_LOCAL_DOMAIN	A notification message cannot be addressed to the Cisco Unity Connection local domain. The specified SMTP address is included in the exception message.

Parameter Properties

@Active

Property Name	Value
Description:	A flag indicating whether the device is active or inactive (enabled/disabled).
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.Active." If "tbl_NotificationDevice.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DeviceName

Property Name	Value
Description:	The "DeviceName" of the notification device.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DeviceName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (12 characters)
Custom Type:	NotificationDeviceName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DeviceName." If "tbl_NotificationDevice.DeviceName" can be NULL, then explicit NULL is allowed.
Default Value:	Other

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The preferred text name of the notification device to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Home Phone," Pager 2," "Work Phone, " etc.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.DisplayName." If "tbl_NotificationDevice.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@MaxBody

Property Name	Value
Description:	The maximum number of characters allowed in the 'body' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxBody
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxBody." If "tbl_NotificationDevice.MaxBody" can be NULL, then explicit NULL is allowed.
Default Value:	512
Direction:	In
Update Column Value From Parameter:	True

@MaxSubject

Property Name	Value
Description:	The maximum number of characters allowed in the 'subject' of a notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDevice.MaxSubject
Required/Optional Parameter:	Optional
SQL Data Type/Length:	int (4 bytes)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDevice.MaxSubject." If "tbl_NotificationDevice.MaxSubject" can be NULL, then explicit NULL is allowed.
Default Value:	64
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationDeviceSMTP object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.ObjectId." If "tbl_NotificationDeviceSMTP.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@PhoneNumber

Property Name	Value
Description:	The phone number or alphanumeric text (as applicable) for sending a notification message to a text-compatible cell phone or pager. In the SA, this is referred to as the "From:" field. Typically, this field contains the number that the subscriber calls to check messages.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.PhoneNumber
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (40 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.PhoneNumber." If "tbl_NotificationDeviceSMTP.PhoneNumber" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@SendCallerId

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include the caller id (if available) with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendCallerId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendCallerId." If "tbl_NotificationDeviceSMTP.SendCallerId" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendCount

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a count of each voice mail, fax, and e-mail message with the notification message. When the subscriber receives the notification, the message count appears as a line for each type of message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendCount
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendCount." If "tbl_NotificationDeviceSMTP.SendCount" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@SendPcaLink

Property Name	Value
Description:	A flag indicating whether Cisco Unity Connection will include a link to the PCA with the notification message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SendPcaLink
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SendPcaLink." If "tbl_NotificationDeviceSMTP.SendPcaLink" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@SmtAddress

Property Name	Value
Description:	The e-mail address of the text pager, text-compatible cell phone, or another e-mail account (such as a home e-mail address) to which the notification message is to be sent. In the SA, this is referred to as the "To:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.SmtAddress
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (320 characters)
Custom Type:	EmailAddress
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.SmtAddress." If "tbl_NotificationDeviceSMTP.SmtAddress" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@StaticText

Property Name	Value
Description:	The actual text message that the subscriber wants to receive in a Text Pager notification. The SA refers to this as the "Send:" field.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationDeviceSMTP.StaticText
Required/Optional Parameter:	Optional
SQL Data Type/Length:	lvarchar (256 characters)
Custom Type:	
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationDeviceSMTP.StaticText." If "tbl_NotificationDeviceSMTP.StaticText" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

6.200. csp_NotificationMwiCreate

Creates a new NotificationMwi object by inserting a new row into tbl_NotificationMwi. A NotificationMwi object contains the properties for one of a subscriber's notification devices.

Additional Information

The parameters @DisplayName and @SubscriberObjectId must be provided.

The trigger tr_NotificationMwi_Insert_Update performs some data validation.

Business Rules

- * A value of NULL in MwiExtension indicates that both the extension and media switch are inherited from the user.
- * Each user may have at most one MWI device set to inherit.
- * Both MwiExtension and MediaSwitchObjectId must contain non-null value if notification MWI is active and not inheriting extension from the user.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this notification MWI to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Office Phone" or "Lab Phone."
Required	@SubscriberObjectId	In	inherit	char (36 characters)	The unique identifier of the Subscriber object to which this MWI belongs.
Optional	@Active	In	inherit	smallint (2 bytes)	Is this active?
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@IncludeFaxMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a FAX message.
Optional	@IncludeTextMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a text message.
Optional	@IncludeVoiceMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a voice message.
Optional	@MediaPortObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPort object Cisco Unity Connection uses to set MWI.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for activating/deactivating the MWI.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MwiExtension	In	inherit	nvarchar (40 characters)	The phone number (extension) of the MWI to activate.
Optional	@MwiOn	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI is on or off. This is the state of the MWI from the perspective of Cisco Unity Connection.
Optional	@ObjectId	Out	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.
Optional	@UsePrimaryExtension	In	explicit-withdefault	smallint (2 bytes)	Set to 1 to indicate that the subscribers primary extension should be used instead of MwiExtension

Exceptions

csp_NotificationMwiCreate will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are three conditions that can cause PARAMETER_NULL_REQUIRED to be thrown: 1. The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message. 2. The value of the parameter @MediaSwitchObjectId is NULL and @UsePrimaryExtension is False. @MediaSwitchObjectId must contain a non-null value when not inheriting the MWI extension from the user. The name of the missing parameter is included with the exception message. 3. The value of the parameter @MWIExtension is NULL and @UsePrimaryExtension is False. @MWIExtension must contain a non-null value when not inheriting the MWI extension from the user. The name of the missing parameter is included with the exception message.
1005	EXCEPTION_OBJECT_NOTFOUND_NOTTYPE	

Parameter Properties

@Active

Property Name	Value
Description:	Is this active?

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.Active
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.Active." If "tbl_NotificationMwi.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.

Property Name	Value
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	False

@DisplayName

Property Name	Value
Description:	The unique text name of this notification MWI to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Office Phone" or " Lab Phone."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.DisplayName
Required/Optional Parameter:	Required
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.DisplayName." If "tbl_NotificationMwi.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IncludeFaxMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a FAX message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeFaxMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)

Property Name	Value
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeFaxMessages." If "tbl_NotificationMwi.IncludeFaxMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IncludeTextMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a text message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeTextMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeTextMessages." If "tbl_NotificationMwi.IncludeTextMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
Direction:	In
Update Column Value From Parameter:	True

@IncludeVoiceMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a voice message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeVoiceMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeVoiceMessages." If "tbl_NotificationMwi.IncludeVoiceMessages" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@MediaPortObjectId

Property Name	Value
Description:	The unique identifier of the MediaPort object Cisco Unity Connection uses to set MWI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MediaPortObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MediaPortObjectId." If "tbl_NotificationMwi.MediaPortObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MediaSwitchObjectId

Property Name	Value
Description:	The unique identifier of the MediaSwitch object to use for activating/deactivating the MWI.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MediaSwitchObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID

Property Name	Value
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MediaSwitchObjectId." If "tbl_NotificationMwi.MediaSwitchObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiExtension

Property Name	Value
Description:	The phone number (extension) of the MWI to activate.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MwiExtension
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (40 characters)
Custom Type:	PhoneNumberE123_Required
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MwiExtension." If "tbl_NotificationMwi.MwiExtension" can be NULL, then explicit NULL is allowed.
Default Value:	NULL
Direction:	In
Update Column Value From Parameter:	True

@MwiOn

Property Name	Value
Description:	A flag indicating whether the MWI is on or off. This is the state of the MWI from the perspective of Cisco Unity Connection.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.MwiOn
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.MwiOn." If "tbl_NotificationMwi.MwiOn" can be NULL, then explicit NULL is allowed.
Default Value:	0

Property Name	Value
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.ObjectId
Required/Optional Parameter:	Optional
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.ObjectId." If "tbl_NotificationMwi.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	Out
Update Column Value From Parameter:	True

@SubscriberObjectId

Property Name	Value
Description:	The unique identifier of the Subscriber object to which this MWI belongs.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.SubscriberObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.SubscriberObjectId." If "tbl_NotificationMwi.SubscriberObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@UsePrimaryExtension

Property Name	Value
Description:	Set to 1 to indicate that the subscribers primary extension should be used instead of MwiExtension
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Explicit NULL with default - an explicit NULL is allowed, and if not specified use the default value of "0."
Default Value:	0
Direction:	In
Update Column Value From Parameter:	False

6.201. csp_NotificationMwiDelete

Deletes a NotificationMwi object from tbl_NotificationMwi as specified by the @ObjectId parameter.

Additional Information

Business Rules

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.

Exceptions

csp_NotificationMwiDelete will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	There are two conditions that can cause an Object Not Found exception to be thrown: 1. The specified NotificationMwi object was not found. The names of the object (Notification mwi), table (tbl_NotificationMwi), and column (ObjectId) are included with the exception message. 2. The result of a SQL transaction indicates that no rows are deleted, but an active transaction is open. The names of the object (Primary Key) , table (tbl_NotificationMwi), and the column (ObjectId) are included with the exception message. The active transaction is rolled back.

Parameter Properties

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@ObjectId

Property Name	Value
Description:	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.

Property Name	Value
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.ObjectId
Required/Optional Parameter:	Required
SQL Data Type/Length:	char (36 characters)
Custom Type:	ObjectID
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.ObjectId." If "tbl_NotificationMwi.ObjectId" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

6.202. csp_NotificationMwiModify

Updates the attributes of a NotificationMwi object based on the values passed in via the parameters. The @ObjectId parameter identifies the NotificationMwi object that is updated.

Additional Information

The trigger tr_NotificationMwi_Insert_Update performs some data validation.

Business Rules

- * A value of NULL in MwiExtension indicates that both the extension and media switch are inherited from the user.
- * Each user may have at most one MWI device set to inherit.
- * Both MwiExtension and MediaSwitchObjectId must contain non-null value if notification MWI is active and not inheriting extension from the user.

Parameter Summary

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Required	@ObjectId	In	inherit	char (36 characters)	The primary key for this table. A globally unique, system-generated identifier for a NotificationMwi object.
Optional	@Active	In	inherit	smallint (2 bytes)	Is this active?
Optional	@AuditAlias	In	undefined	nvarchar (64 characters)	The Unity alias that will be associated with an audit log record.
Optional	@AuditComponent	In	undefined	varchar (64 characters)	The Unity component that will be associated with an audit log record.
Optional	@DisplayName	In	inherit	nvarchar (64 characters)	The unique text name of this notification MWI to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Office Phone" or "Lab Phone."
Optional	@IncludeFaxMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a FAX message.
Optional	@IncludeTextMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a text message.
Optional	@IncludeVoiceMessages	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI should be set for a voice message.
Optional	@MediaPortObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaPort object Cisco Unity Connection uses to set MWI.
Optional	@MediaSwitchObjectId	In	inherit	char (36 characters)	The unique identifier of the MediaSwitch object to use for activating/deactivating the MWI.

Parameter Required	Name	Direction	Null Handling	SQL Data Type/Length	Description
Optional	@MwiExtension	In	inherit	nvarchar (40 characters)	The phone number (extension) of the MWI to activate.
Optional	@MwiOn	In	inherit	smallint (2 bytes)	A flag indicating whether the MWI is on or off. This is the state of the MWI from the perspective of Cisco Unity Connection.
Optional	@UsePrimaryExtension	In	ignore	smallint (2 bytes)	Set to 1 to indicate that the subscribers primary extension should be used instead of MwiExtension

Exceptions

csp_NotificationMwiModify will throw the following exception(s) for the stated error condition(s):

Error #	Name	Description
1002	EXCEPTION_PARAMETER_NULL_REQUIRED	There are two conditions that can cause PARAMETER_NULL_REQUIRED to be thrown: 1. The value of the required parameter @ObjectId is NULL. The name of the missing parameter is included with the exception message. 2. The value of the parameter @MWIExtension is NULL and @UsePrimaryExtension is False. @MWIExtension must contain a non-null value when not inheriting the MWI extension from the user. The name of the missing parameter is included with the exception message.
1004	EXCEPTION_OBJECT_NOTFOUND	The specified NotificationMwi object was not found. The names of the object (Notification mwi), table (tbl_NotificationMwi), and column (ObjectId) are included with the exception message.

Parameter Properties

@Active

Property Name	Value
Description:	Is this active?
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.Active
Required/Optional Parameter:	Optional

Property Name	Value
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.Active." If "tbl_NotificationMwi.Active" can be NULL, then explicit NULL is allowed.
Default Value:	1
Direction:	In
Update Column Value From Parameter:	True

@AuditAlias

Property Name	Value
Description:	The Unity alias that will be associated with an audit log record.
Notes:	This will always be the same as the Alias custom type.
Business Rules:	
Developer Notes:	Every proc will have an AuditAlias parameter for auditing purposes. Even though this will always be the same as the Alias custom type, it's better to have a unique custom type for the audit alias in case we ever need to un-bind the two.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	AuditAlias
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@AuditComponent

Property Name	Value
Description:	The Unity component that will be associated with an audit log record.
Notes:	
Business Rules:	
Developer Notes:	Every proc will have a component name parameter for auditing purposes.
Reference Table/Column:	
Required/Optional Parameter:	Optional
SQL Data Type/Length:	varchar (64 characters)
Custom Type:	AuditComponent
Null Handling:	Inherit, but Table/Column reference is UNDEFINED.

Property Name	Value
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@DisplayName

Property Name	Value
Description:	The unique text name of this notification MWI to be used when displaying entries in the administrative console, e.g. Cisco Unity Connection Administration. For example, "Office Phone" or " Lab Phone."
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.DisplayName
Required/Optional Parameter:	Optional
SQL Data Type/Length:	nvarchar (64 characters)
Custom Type:	DisplayName
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.DisplayName." If "tbl_NotificationMwi.DisplayName" can be NULL, then explicit NULL is allowed.
Default Value:	
Direction:	In
Update Column Value From Parameter:	True

@IncludeFaxMessages

Property Name	Value
Description:	A flag indicating whether the MWI should be set for a FAX message.
Notes:	
Business Rules:	
Developer Notes:	
Reference Table/Column:	tbl_NotificationMwi.IncludeFaxMessages
Required/Optional Parameter:	Optional
SQL Data Type/Length:	smallint (2 bytes)
Custom Type:	Bool
Null Handling:	Inherit - inherit parameter value from "tbl_NotificationMwi.IncludeFaxMessages." If "tbl_NotificationMwi.IncludeFaxMessages" can be NULL, then explicit NULL is allowed.
Default Value:	0
